For clarity of this map, only the highest and indicated assemblage on the map. For example, units of the Devonian Bay assemblage, labeled CmSa and CmSa1 are unrepresented under the colour of their parent (CmSa).

Drainage network (including of assemblages and component units) by type
of colour setting and colour codes as follows:
1. Red: Active and/or active drainage
2. Yellow: Active and/or active drainage
3. Green: Active and/or active drainage
4. Blue: Active and/or active drainage
5. Purple: Active and/or active drainage
6. Orange: Active and/or active drainage
7. Brown: Active and/or active drainage
8. Grey: Active and/or active drainage
9. Black: Active and/or active drainage

Abstract
The map and the related geodatabase illustrate the tectonic geology of Banks Island, northern Banks Island (Canada) and northwestern Victoria Island, Northwest Territories. The map shows the tectonic geology of the Banks Island and northwestern Victoria Island, Northwest Territories. The map shows the tectonic geology of the Banks Island and northwestern Victoria Island, Northwest Territories. The map shows the tectonic geology of the Banks Island and northwestern Victoria Island, Northwest Territories.

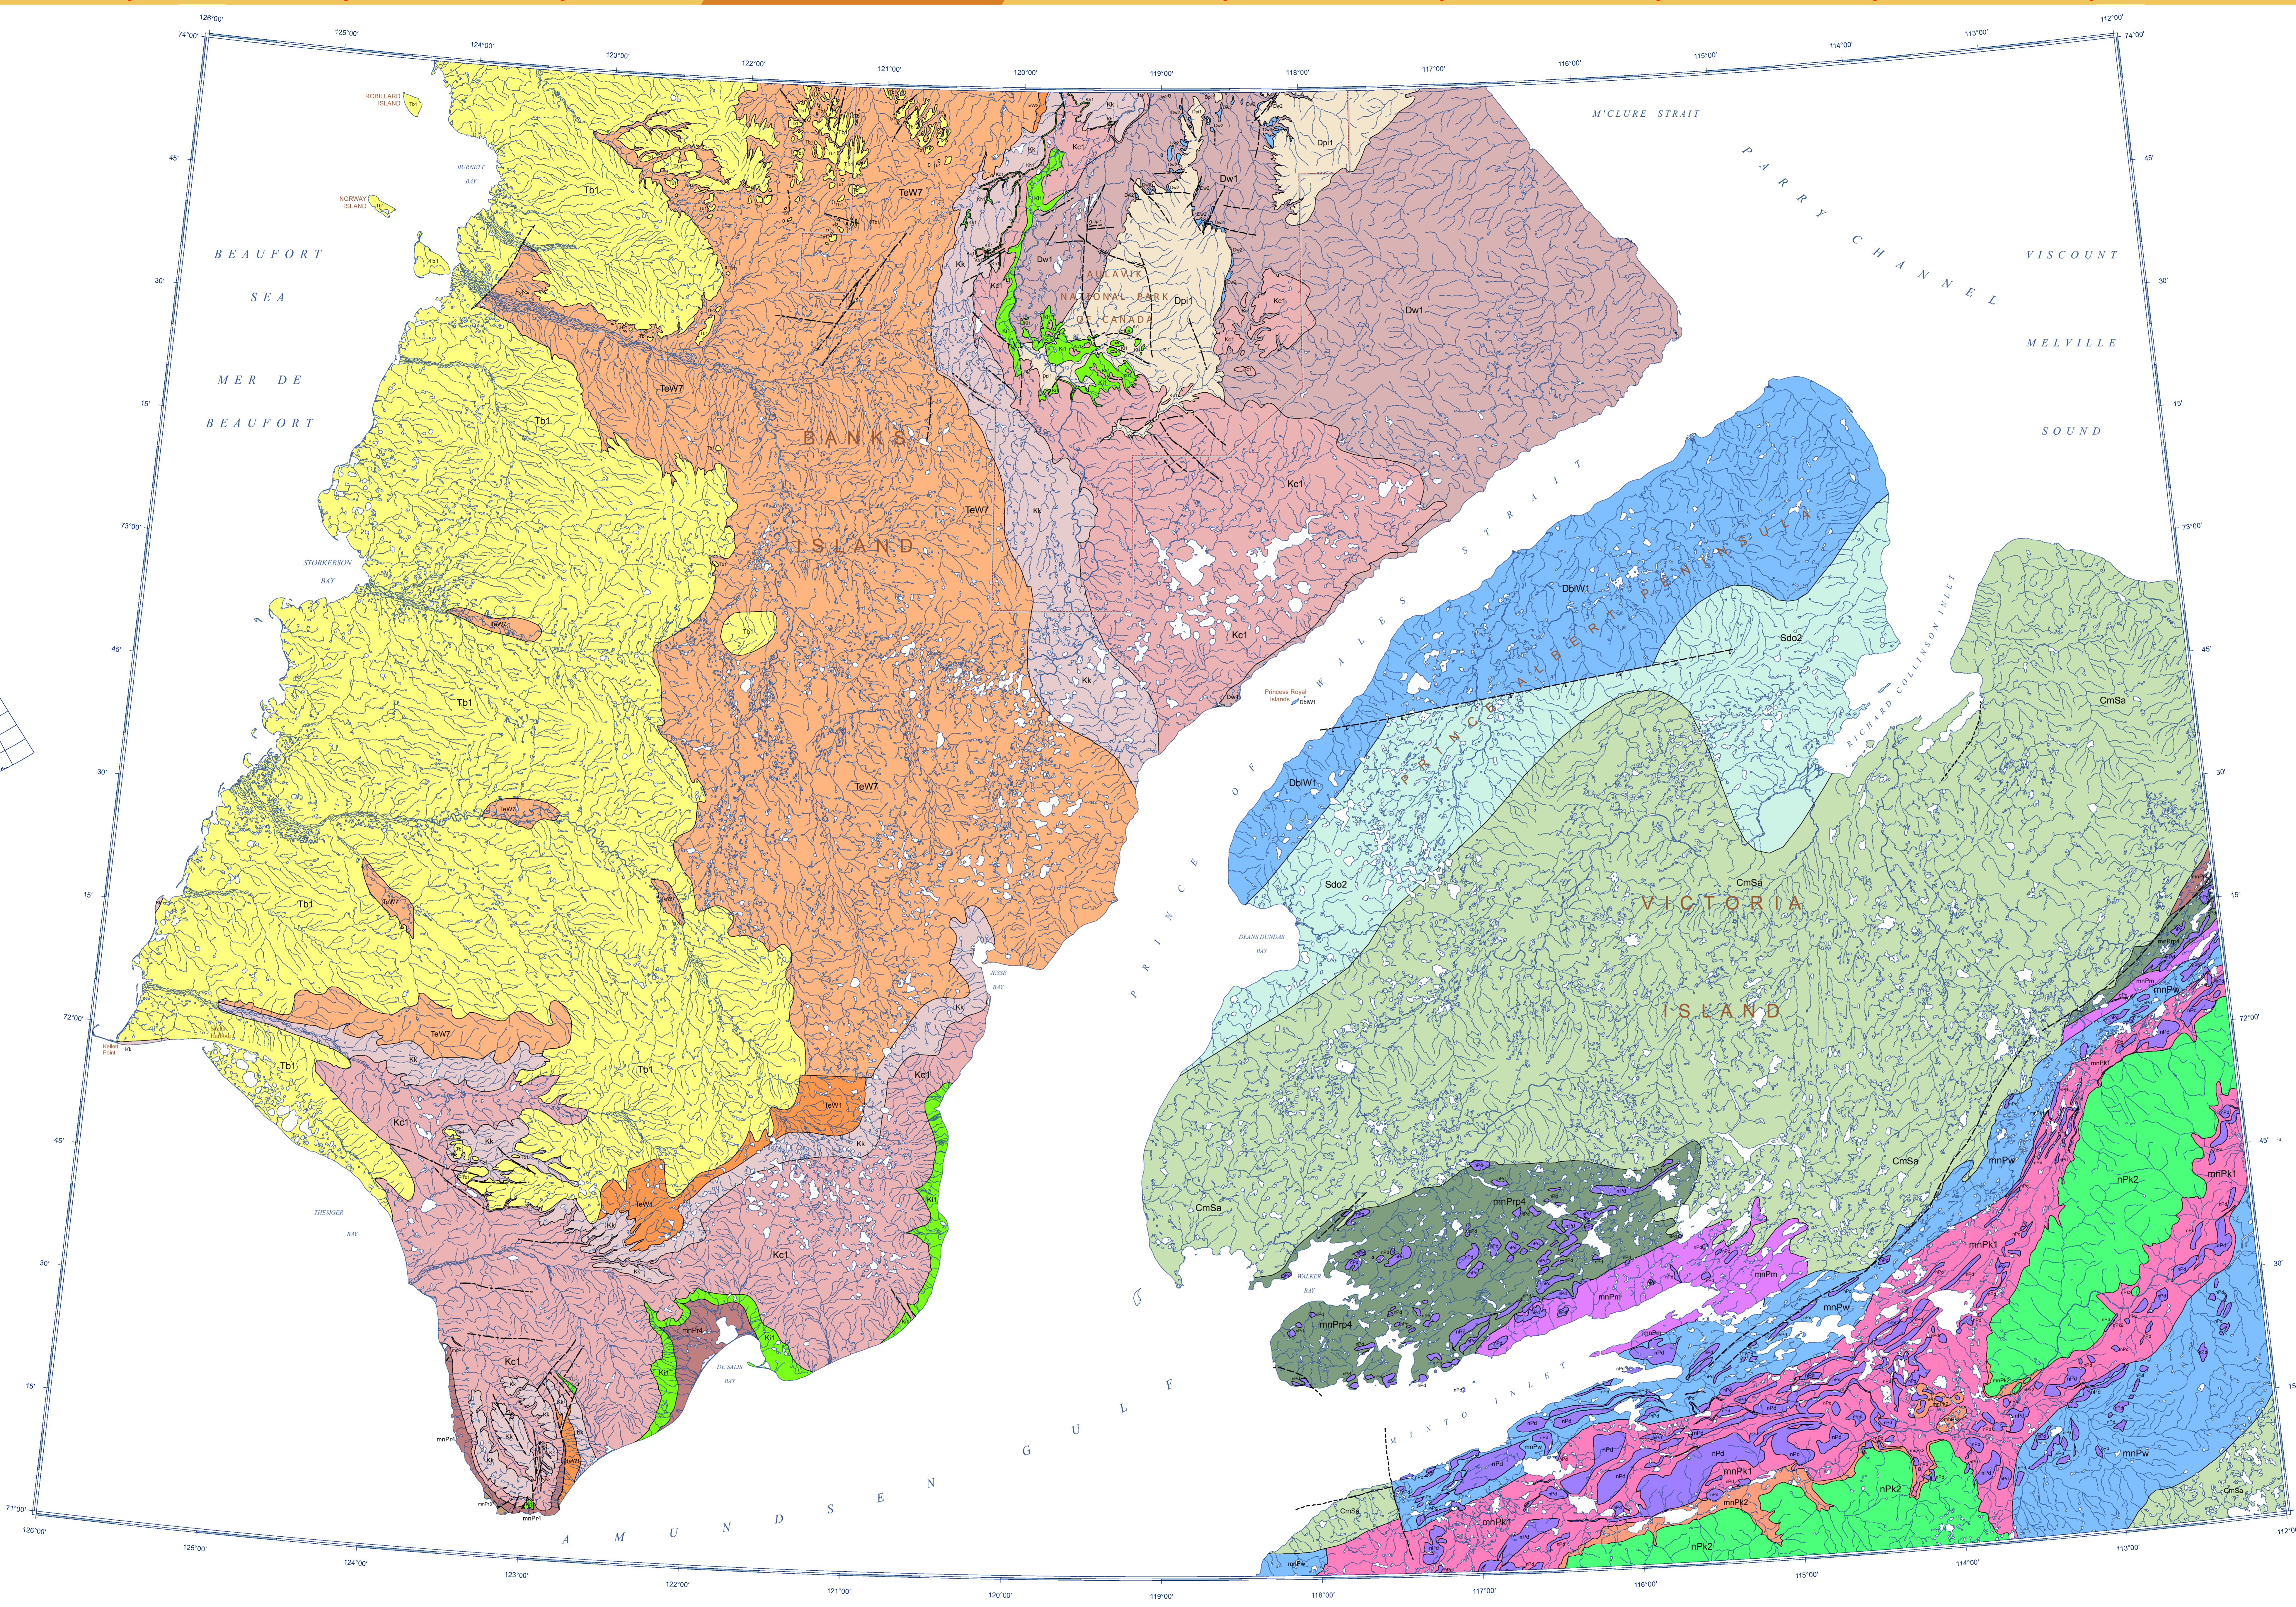

Résumé
Celle carte et la géodatabase qui y est rattachée illustrent la géologie tectonique de l'île Banks, île du Nord-Ouest du Canada, et de l'île Victoria, île du Nord-Ouest du Canada. La carte illustre la géologie tectonique de l'île Banks, île du Nord-Ouest du Canada, et de l'île Victoria, île du Nord-Ouest du Canada. La carte illustre la géologie tectonique de l'île Banks, île du Nord-Ouest du Canada, et de l'île Victoria, île du Nord-Ouest du Canada.
