Abstract. This Open File provides tabulated values of relative sea-level projections for 59 locations in Canada and 10 locations in the adjacent mainland United States up to the year 2100. It complements Open File 7737 “Relative Sea-level Projections in Canada and adjacent mainland United States”, which included plots of projected relative sea-level change but did not provide numerical values. The relative sea-level projections are based on the Fifth Assessment Report of the Intergovernmental Panel on Climate Change (IPCC AR5) and on GPS observations of vertical crustal motion. Projections are relative to 1986-2005, and are given for 2007 and every ten years from 2010 to 2100 for the median value and 5th and 95th percentiles for Representative Concentration Pathway (RCP) scenarios RCP2.6, RCP4.5, and RCP8.5. As well, the projected sea level at 2100 is given for a fourth scenario where Antarctica is assumed to provide an additional 65 cm of global sea-level rise to the median projection of RCP8.5. The reader is referred to Open File 7737 for background and methods for deriving the relative sea-level projections.

1. Introduction

This open file provides tables of projected relative sea-level change for coastal locations in Canada and the adjacent mainland United States up to the year 2100. It complements previously released Open File 7737 “Relative Sea-level Projections in Canada and adjacent mainland United States” (James et al., 2014), which included plots of relative sea-level projections but did not provide numerical values.

Relative sea-level changes are the changes in sea level that are observed or experienced relative to the solid surface of the Earth. Land uplift can offset global sea-level rise, leading to reduced rise or even fall of relative sea level; on the other hand, land subsidence adds to absolute sea-level rise and increases relative sea-level rise.

The relative sea-level projections given here are based on the Fifth Assessment Report of the Intergovernmental Panel on Climate Change (IPCC AR5) (Church et al., 2013a, b) and on GPS observations of vertical land motion (James et al., 2014). The reader is referred to Church et al. (2013a, b) and James et al. (2014) for background and methods for deriving the relative sea-level projections, for explanation of scenarios, and for scope and limitations of the projections.

2. Contents of this Report

Three maps (Figure 1) give site locations and names for which relative sea-level projections are provided (59 in Canada and 10 in the United States). A mouse click on a site name will link the reader to a page that gives tables of projected relative sea-level change and a figure showing the sea-level projections through the 21st century for the site. Sea-level projections are tabulated for Representative Concentration Pathway (RCP) scenarios RCP2.6, RCP4.5, and RCP8.5 for 2007 and for every decade from 2010 to 2100 for the median and 5th and 95th percentile values. As well, the average projections for the time period 2081-2100 include RCP6.0 and are given for the median and 5th and 95th percentile values. Finally, the relative sea-level projection at 2100 is provided for another scenario that provides an additional 65 cm of global sea-level rise sourced from the West Antarctic Ice Sheet and added to the median projection of RCP8.5.

3. Summary

The tabulated values provided here may assist the reader with preparation of plots and tables related to projections of mean relative sea-level change at specified locations in Canada and the northern mainland United States. The reader is referred to James et al. (2014) for a description of the derivation of the projections and a related discussion.

Acknowledgments.

We acknowledge support from the Climate Change Impacts and Adaptation Division, Earth Sciences Sector (ESS), NRCan. We gratefully acknowledge the advice and encouragement provided by Don Lemmen. Mark Carson is gratefully acknowledged for assistance with IPCC AR5 data files. The AR5 sea-level projections were obtained from the Integrated Climate Data Center at the University of Hamburg and downloaded from https://icdc.zmaw.de/ar5_slr.html?&L=1 (at the time of writing, the web page has changed and click on “English” on top right corner to be taken to the English language page). We thank John Hunter for providing advice on the IPCC AR5 regional sea-level projections. We thank the Canadian Crustal Deformation Service for support for GPS data

analysis. Felicity Rhone provided key technical assistance with maps, figures, and tables. This is an output of the ESS Climate Change Geoscience Program.

Annex. Maps, Tables and Figures of Relative Sea-level Projections

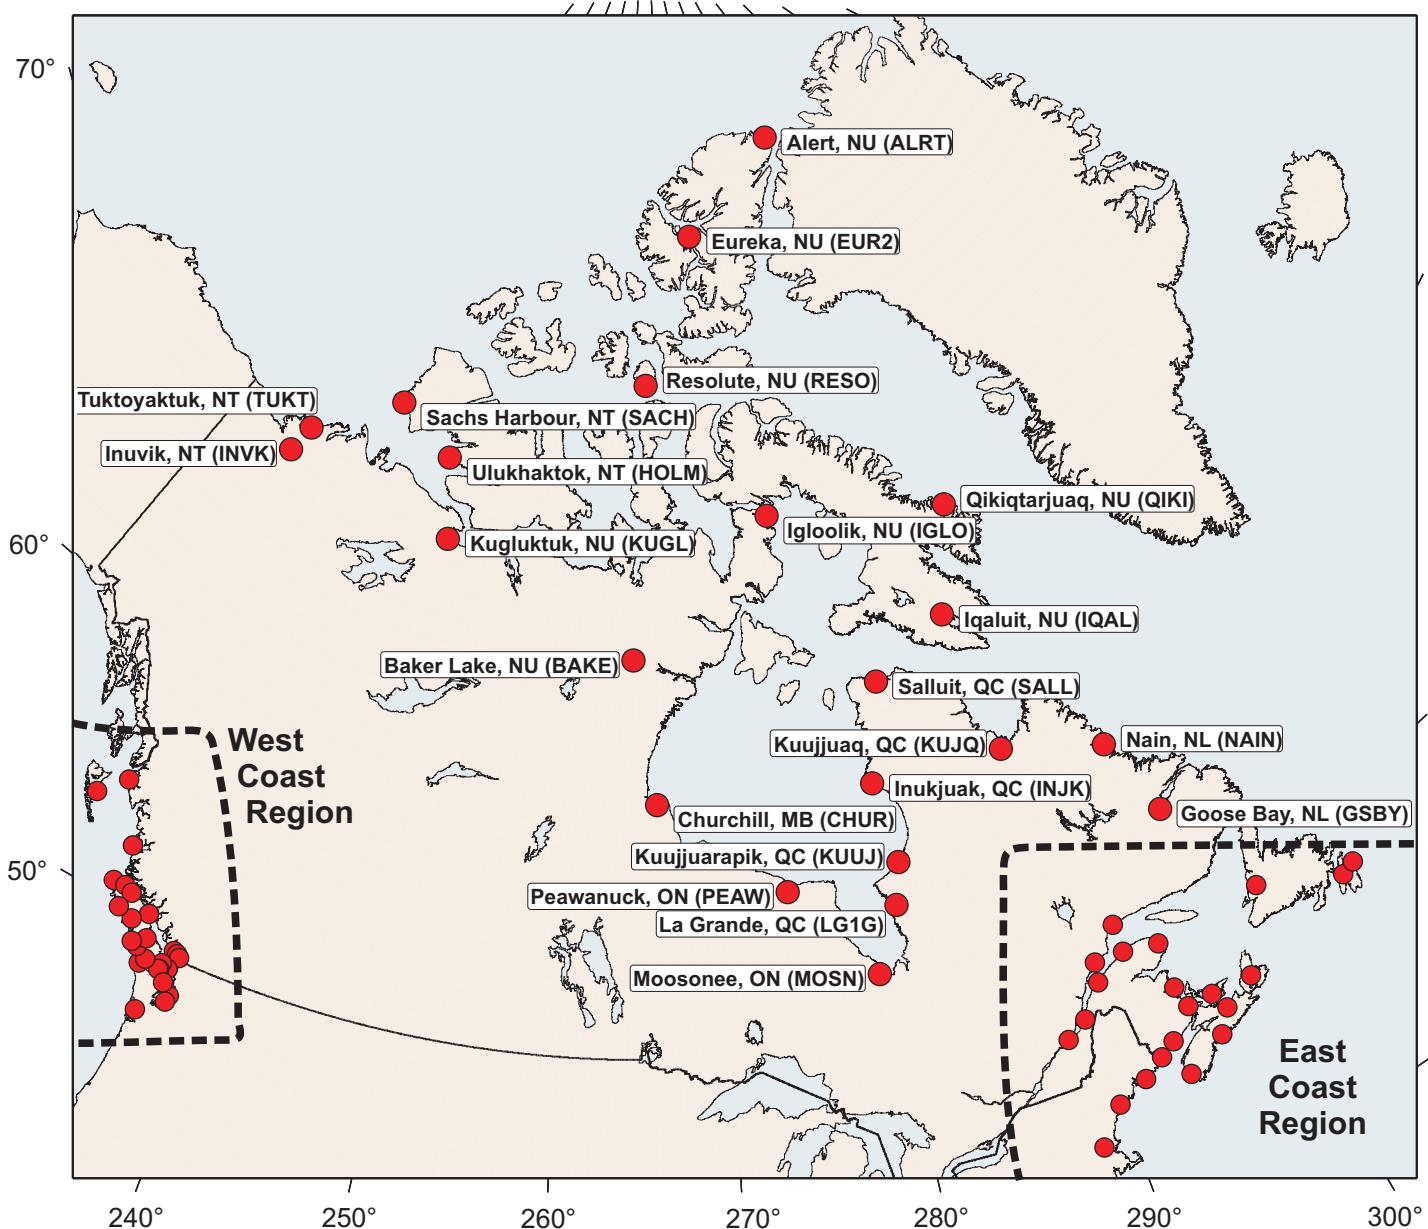

Figure 1a. Site map indicating locations for which relative sea-level projections are provided (red dots) and indicating the extent of the East and West Coast Regions (see Fig. 1b and 1c). Site names and GPS station abbreviations (in brackets) are given for the North Coast Region. A mouse click in the East Coast Region or the West Coast Region provides a link to the map for the corresponding region. A mouse click on a red dot or station name in the North Coast Region provides a link to a page providing a figure and tables of relative sea-level projections for the site.

Figure 1b. Site map indicating locations for which relative sea-level projections are provided (coloured dots) in the East Coast Region. GPS site names are given in brackets. Charlottetown, PE, (green dot) does not have a GPS station and its vertical velocity is estimated from nearby GPS sites. A mouse click on a site location or site name provides a link to a page providing a figure and tables of relative sea-level projections for the site.

Figure 1c. Site map indicating locations for which relative sea-level projections are provided (red dots) in the West Coast Region. GPS site names are given in brackets. A mouse click on a site location or site name provides a link to a page providing a figure and tables of relative sea-level projections for the site.

Québec City, QC (ATRI)

Projected sea-level change is given in centimetres, relative to 1995.

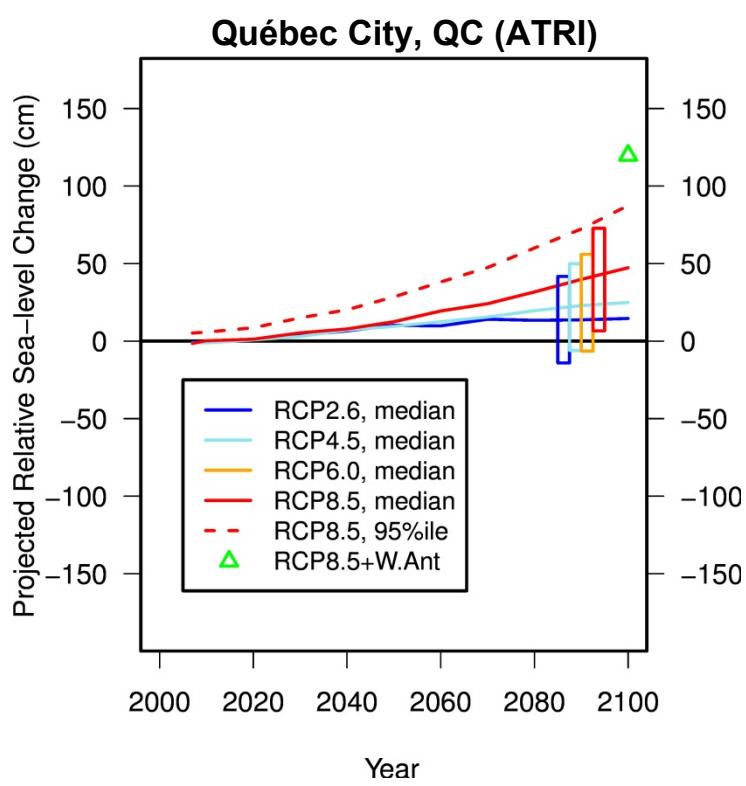

Figure 2. Projected relative sea-level change for RCP2.6, RCP4.6, and RCP8.5 (median values, solid lines; 95th percentile of RCP8.5, dashed line) (James et al., 2014). Rectangles also include RCP6.0 and give the 90% confidence range (5% to 95%) of the average for the time period 2081–2100. RCP8.5 +W.Ant is the median projection of RCP8.5 plus an additional 65 cm of global sea-level rise from West Antarctica (green triangle).

Baie-Comeau, QC (BAIE)

Projected sea-level change is given in centimetres, relative to 1995.

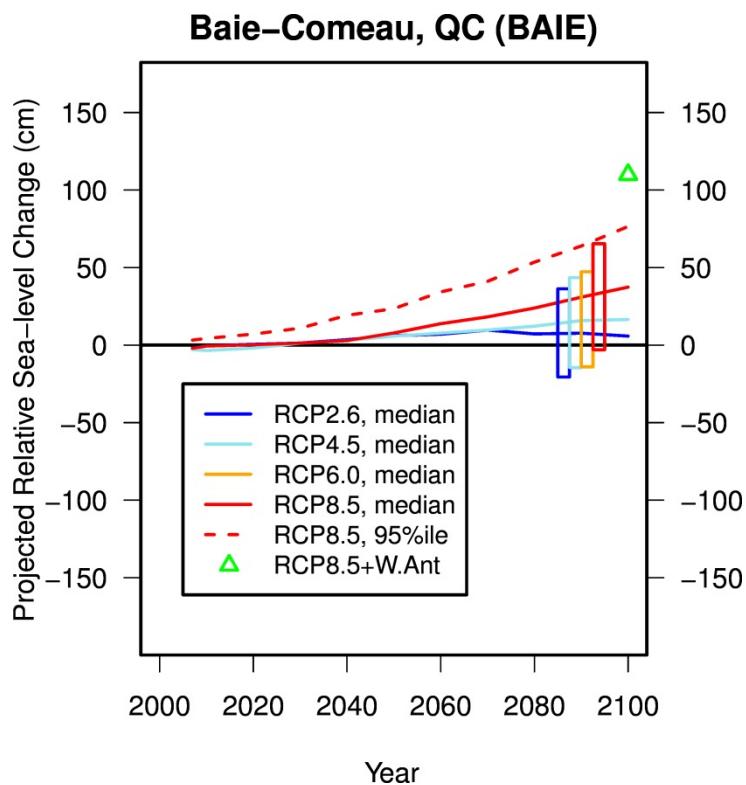

Figure 5. Projected relative sea-level change for RCP2.6, RCP4.6, and RCP8.5 (median values, solid lines; 95th percentile of RCP8.5, dashed line) (James et al., 2014). Rectangles also include RCP6.0 and give the 90% confidence range (5% to 95%) of the average for the time period 2081–2100. RCP8.5 +W.Ant is the median projection of RCP8.5 plus an additional 65 cm of global sea-level rise from West Antarctica (green triangle).

| | Average Projected Sea-level Change, 2081–2100 | | |
|----------|---|--------|------|
| scenario | 5% | median | 95% |
| RCP2.6 | -20.6 | 7.9 | 36.3 |
| RCP4.5 | -14.5 | 14.5 | 43.5 |
| RCP6.0 | -14.0 | 16.7 | 47.3 |
| RCP8.5 | -3.0 | 31.2 | 65.4 |

Projected sea-level change is given in centimetres, relative to 1995.

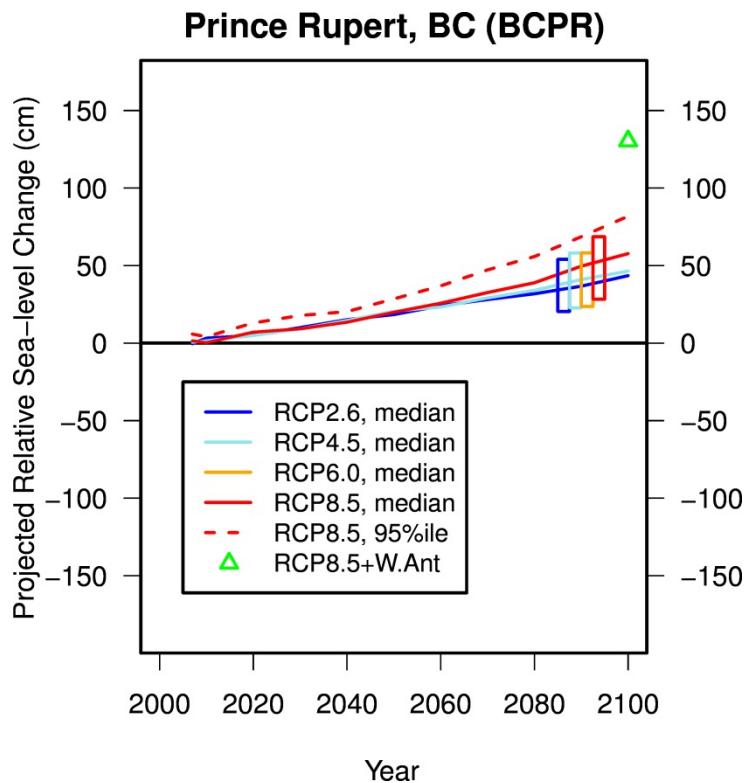

Figure 24. Projected relative sea-level change for RCP2.6, RCP4.6, and RCP8.5 (median values, solid lines; 95th percentile of RCP8.5, dashed line) (James et al., 2014). Rectangles also include RCP6.0 and give the 90% confidence range (5% to 95%) of the average for the time period 2081–2100. RCP8.5 +W.Ant is the median projection of RCP8.5 plus an additional 65 cm of global sea-level rise from West Antarctica(green triangle).

| | Average Projected Sea-level Change, 2081-2100 | | |
|----------|---|--------|------|
| scenario | 5% | median | 95% |
| RCP2.6 | 20.4 | 37.2 | 54.0 |
| RCP4.5 | 22.7 | 40.4 | 58.1 |
| RCP6.0 | 23.6 | 40.9 | 58.2 |
| RCP8.5 | 28.3 | 48.4 | 68.6 |

Vancouver, BC (BCVC)

Projected sea-level change is given in centimetres, relative to 1995.

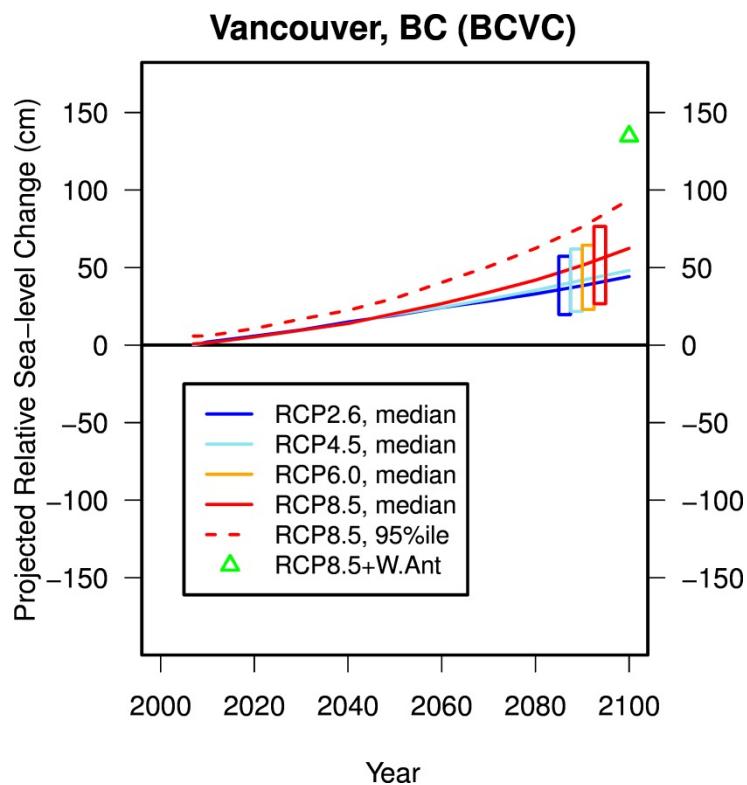

Figure 31. Projected relative sea-level change for RCP2.6, RCP4.6, and RCP8.5 (median values, solid lines; 95th percentile of RCP8.5, dashed line) (James et al., 2014). Rectangles also include RCP6.0 and give the 90% confidence range (5% to 95%) of the average for the time period 2081–2100. RCP8.5 +W.Ant is the median projection of RCP8.5 plus an additional 65 cm of global sea-level rise from West Antarctica (green triangle).

Victoria, BC (ALBH)

Projected sea-level change is given in centimetres, relative to 1995.

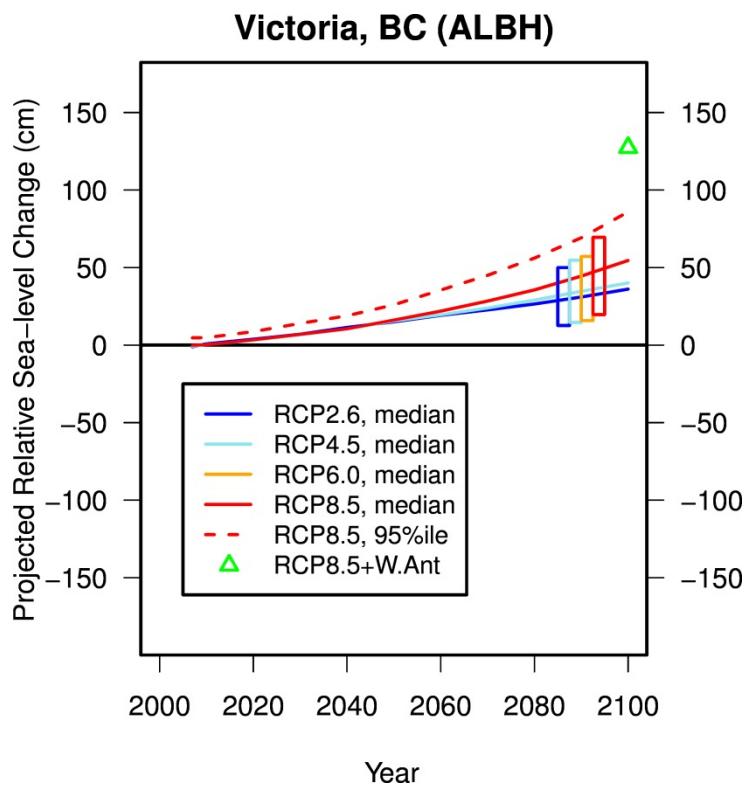

Figure 37. Projected relative sea-level change for RCP2.6, RCP4.6, and RCP8.5 (median values, solid lines; 95th percentile of RCP8.5, dashed line) (James et al., 2014). Rectangles also include RCP6.0 and give the 90% confidence range (5% to 95%) of the average for the time period 2081–2100. RCP8.5 +W.Ant is the median projection of RCP8.5 plus an additional 65 cm of global sea-level rise from West Antarctica (green triangle).

Port Renfrew, BC (PTRF)

Projected sea-level change is given in centimetres, relative to 1995.

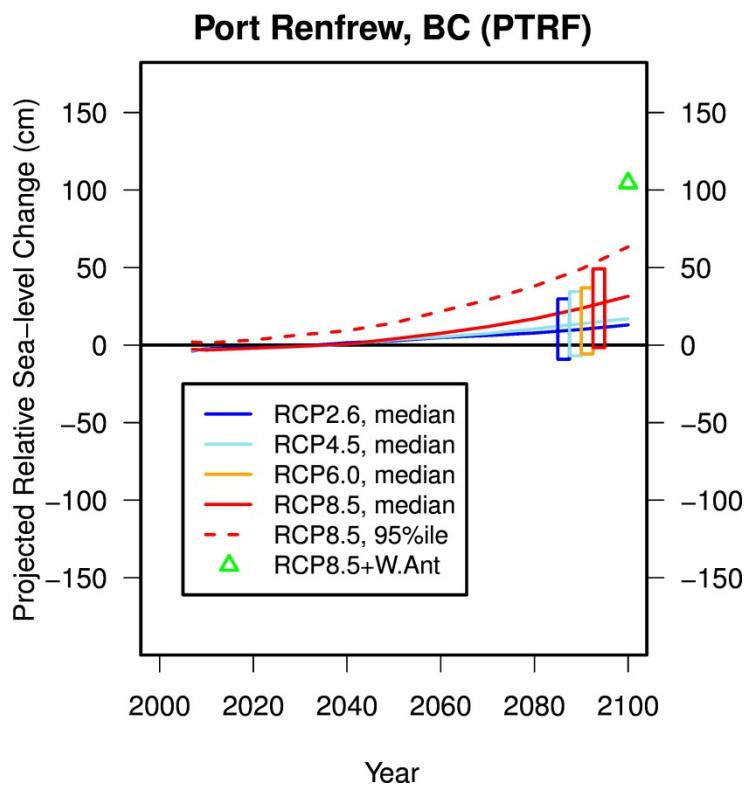

Figure 43. Projected relative sea-level change for RCP2.6, RCP4.6, and RCP8.5 (median values, solid lines; 95th percentile of RCP8.5, dashed line) (James et al., 2014). Rectangles also include RCP6.0 and give the 90% confidence range (5% to 95%) of the average for the time period 2081-2100. RCP8.5 +W.Ant is the median projection of RCP8.5 plus an additional 65 cm of global sea-level rise from West Antarctica(green triangle).

| scenario | 5% | median | 95% |
|----------|------|--------|------|

Baker Lake, NU (BAKE)

Projected sea-level change is given in centimetres, relative to 1995.

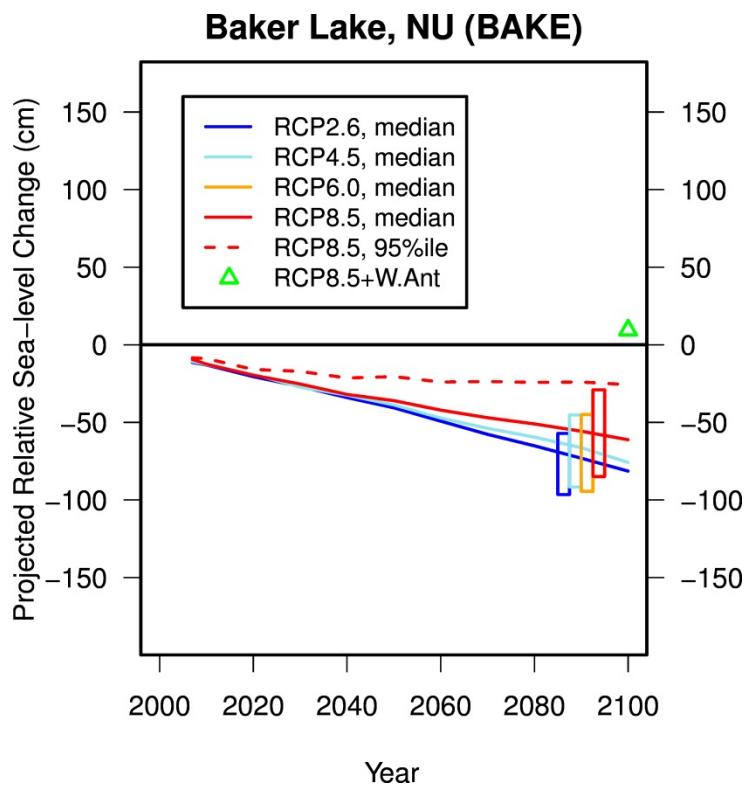

Figure 50. Projected relative sea-level change for RCP2.6, RCP4.6, and RCP8.5 (median values, solid lines; 95th percentile of RCP8.5, dashed line) (James et al., 2014). Rectangles also include RCP6.0 and give the 90% confidence range (5% to 95%) of the average for the time period 2081–2100. RCP8.5 +W.Ant is the median projection of RCP8.5 plus an additional 65 cm of global sea-level rise from West Antarctica (green triangle).

La Grande 1, QC (LG1G)

Projected sea-level change is given in centimetres, relative to 1995.

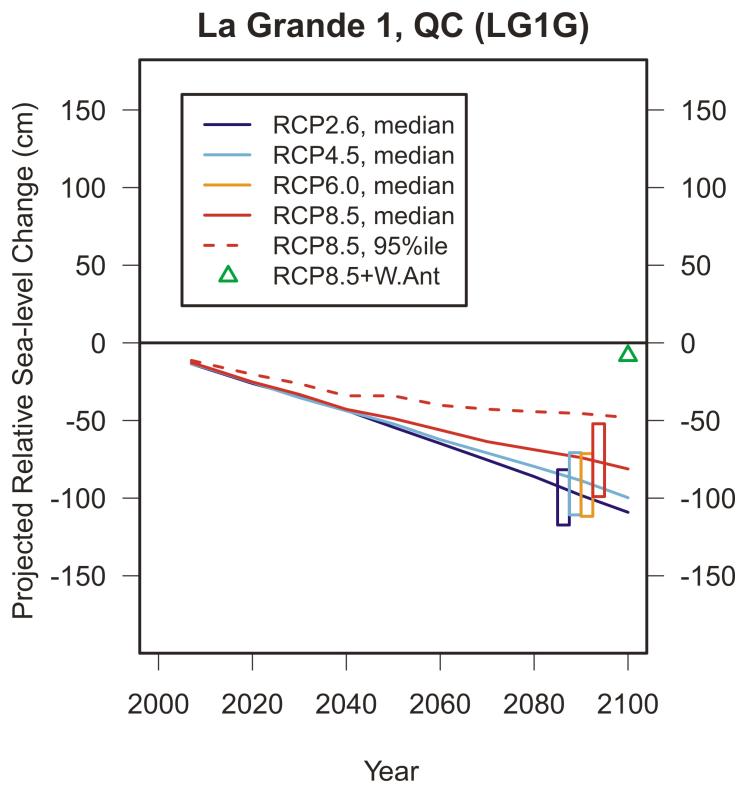

Figure 62. Projected relative sea-level change for RCP2.6, RCP4.6, and RCP8.5 (median values, solid lines; 95th percentile of RCP8.5, dashed line) (James et al., 2014). Rectangles also include RCP6.0 and give the 90% confidence range (5% to 95%) of the average for the time period 2081-2100. RCP8.5+W.Ant is the median projection of RCP8.5 plus an additional 65 cm of global sea-level rise from West Antarctica (green triangle).

| | Average Projected Sea-level Change, 2081-2100 | | |
|----------|---|--------|-------|
| scenario | 5% | median | 95% |
| RCP2.6 | -117.3 | -99.5 | -81.7 |

Figure 68. Projected relative sea-level change for RCP2.6, RCP4.5, and RCP8.5 (median values, solid lines; 95th percentile of RCP8.5, dashed line) (James et al., 2014). Rectangles also include RCP6.0 and give the 90% confidence range (5% to 95%) of the average for the time period 2081-2100. RCP8.5 +W.Ant is the median projection of RCP8.5 plus an additional 65 cm of global sea-level rise from West Antarctica(green triangle).

| Average Projected Sea-level Change, 2081-2100 | | | |
|---|------|--------|------|
| scenario | 5% | median | 95% |
| RCP2.6 | -8.3 | 15.8 | 40.0 |
| RCP4.5 | -2.4 | 22.7 | 47.9 |
| RCP6.0 | -3.5 | 24.4 | 52.2 |
| RCP8.5 | 5.8 | 37.0 | 68.2 |

RCP8.5+W.Ant at 2100: 114.9 cm

Salluit, QC (SALL)

Projected sea-level change is given in centimetres, relative to 1995.

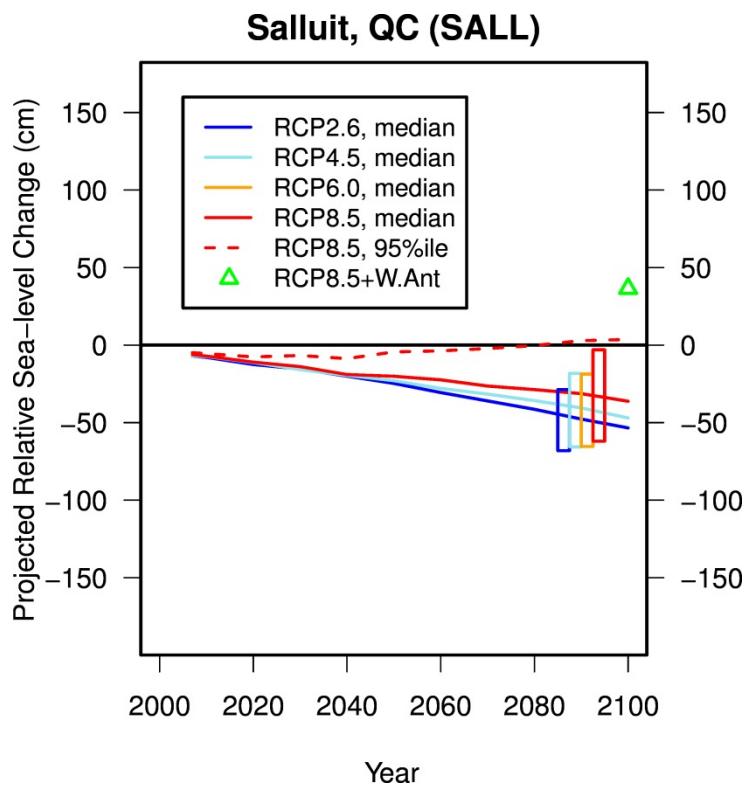

Figure 69. Projected relative sea-level change for RCP2.6, RCP4.6, and RCP8.5 (median values, solid lines; 95th percentile of RCP8.5, dashed line) (James et al., 2014). Rectangles also include RCP6.0 and give the 90% confidence range (5% to 95%) of the average for the time period 2081–2100. RCP8.5 +W.Ant is the median projection of RCP8.5 plus an additional 65 cm of global sea-level rise from West Antarctica(green triangle).

| | Average Projected Sea-level Change, 2081–2100 | | |
