

pXRF compared to fusion, multi acid and aqua regia digestion methods:

Regression Plots - Aurora Borehole

For bivariate plots a one-to-one relationship is plotted as a dashed green line. Linear regression lines determined by the least squares approach to the data are displayed on the figures in black line. Where clustering of data occurs a reduced major axis regression (RMA) that assumes there are errors to both y and x data was also carried. The RMA regression line is plotted as a blue line.
