FOREWORD

In the early 1980's CANMET was requested by the National Advisory Committee on Mining and Metallurgical Research to establish a mining technology database. The database was established in 1985 and is updated annually. The 1987 Index is, thus, the third annual report. It contains all the information that has been made available to us on mining research and technological developments in Canada.

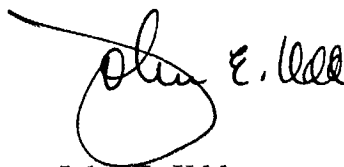

In 1987, the Mining Research Laboratories stressed participation by mining companies in the gold and industrial mineral sectors. In addition, initial contact was established with a number of coal mining operations. Besides being of interest in the sharing of common problems, the contribution of the coal mines can prove very rewarding for the other sectors of the industry facing similar problems, such as the revegetation of mine dumps.

Section One of the report lists projects by organization. Section Two divides the projects into twelve categories. The task of assigning mining activities to categories of roughly similar size has proven to be a difficult one. Consequently, many projects appear under two headings because of their descriptions or the natural links between various mining activities. Suggestions from readers on how to solve this problem of classification would be appreciated.

CANMET staff members visiting various mining operations have been struck by the unanimity of opinion concerning the usefulness of the Index, in the way in which it classifies and makes information available. However, it would be desirable to have the publication circulate more widely among the technical personnel of companies. We believe that a number of potential users currently do not benefit from this source of information.

The usefulness of CANMET's Index of Mining Technology Projects depends on the participation of the mining community. We trust that the inclination, in 1987, on the part of more and more companies to share information will continue in the future, contributing to real productivity increases and greater international competitiveness for Canada.

Finally, I would like to thank all those who have contributed to the 1987 version of the Index, and request their support and that of new contributors in the preparation of the 1988 report.

John E. Udd
Director
Mining Research Laboratories

AVANT-PROPOS

Le Comité consultatif national sur la recherche en mines et métallurgie a demandé à CANMET de mettre sur pied une banque de données sur la technologie minière. Celle-ci a été initiée en 1985 et est mise à jour annuellement. Le répertoire 1987 constitue donc le troisième rapport annuel sur la banque de données qui contient l'ensemble des informations sur la recherche et les développements technologiques en exploitation minière au Canada.

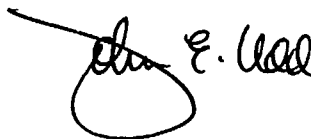

Au cours de l'année 1987, les Laboratoires de recherche minière ont accentué la participation des entreprises minières des secteurs de l'or et des minéraux industriels. De plus, des premiers contacts ont été établis avec un certain nombre d'exploitants de charbon. L'apport des mines de charbon, en plus d'être intéressante dans un but de partage de problèmes communs, peut être fort bénéfique aux autres secteurs de l'industrie qui font face à des problèmes semblables, par exemple de revégétation des terrils.

La première section du rapport regroupe les projets par organisation. La seconde assigne les projets à l'une des douzes catégories. Regrouper les activités minières en catégories relativement balancées au point de vue du nombre de projets n'est pas chose facile. Conséquemment, un bon nombre de projets apparaissent dans deux catégories à cause de leur description ou de l'interaction naturelle existant entre diverses activités minières. Les suggestions des lecteurs pour pallier à ce problème de classification seraient appréciées.

Il est remarquable de constater, lors des visites du personnel de CANMET aux diverses exploitations minières, l'unanimité des personnes rencontrées à qualifier le répertoire de fort utile dans la façon de classier et d'accéder à l'information. Il serait cependant souhaitable que ce produit circule davantage à l'intérieur des entreprises parmi le personnel technique car plusieurs usagers potentiels sont présentement privés de cette source d'information.

L'utilité du répertoire de projets en technologie minière de CANMET dépend du degré de participation de la communauté minière. Espérons que la tendance notée en 1987 quant au partage d'informations d'entreprises de plus en plus nombreuses se poursuivra à l'avenir et contribuera à des accroissements de productivité véritables et à une plus grande compétivité internationale du Canada.

En dernier lieu, je voudrais remercier tous ceux qui ont contribué à la version 1987 du répertoire et solliciter leur soutien, tout autant que celui de nouveaux participants, pour la préparation de la version 1988.

John E. Udd
Directeur
Laboratoires de recherche minière

INTRODUCTION

Mines are often isolated from centres with universities, professional associations and other sources of new information. Many operators, because of the isolation, must work with only partial knowledge of new techniques, equipment or procedures that might be of great value to them. As a result they are forced, at times, to "re-invent the wheel". With increasing competition and softening metal demands such re-inventions are needless expenses to mine operators and to the national economy. Since relations between mines are usually cooperative CANMET was requested to establish an information system to facilitate communication between operators and other segments of the industry on technology development projects.

This report contains the results of the 1986 information gathering exercise. Some information was gathered by telephone conversations, some by mail and some by mine visits. A few of the mines contacted had no projects underway to improve their operations; some remained to be convinced that they could benefit from projects being carried out by other operators. Their response raises the question what is research and how does research differ from those operational improvements all mines strive for daily? For the purpose of the "Index" all research projects submitted have been included.

While no two mines are alike, all share many similarities. Staffs at many underground mines see the advantages in their mines changing from selective mining methods to bulk mining. At some mines complete changes can be made, at other mines, because of ore-body configuration, only partial changes are possible. The major benefit of such changes are reduced cost through higher stope production rates and reduced stope development requirements. Other mines are trying to reduce costs by increasing production rates, redesigning materials handling systems, increasing mechanization and concentrating men in fewer work places. Whatever the specific circumstances, most operators are trying to incorporate some or all of these new concepts into their mine operations. This report outlines projects being undertaken by operators related to implementation of such concepts.

CANMET does not possess detailed information on projects contained in the "Index". For detailed information the user is directed to the contact persons listed for each project.

INTRODUCTION

Les mines sont souvent isolées des centres où sont concentrées universités, associations professionnelles et autres sources d'informations nouvelles. Dû à cet isolement, beaucoup d'opérations doivent oeuvrer avec des techniques, équipements ou procédures partiellement adaptés qui pourraient donc leur être plus profitables. Conséquemment, il faut de temps à autre "réinventer la roue". Avec l'accroissement de la compétition et la baisse de la demande pour les métaux, de telles réinventions constituent des frais superflus pour l'exploitant minier ainsi que pour l'économie nationale. Les mines désirant maintenir un niveau de coopération élevé, CANMET a été approché afin d'établir un système qui favoriserait les transferts d'information sur les projets de développement technologique d'un exploitant à l'autre et entre les différents secteurs de l'industrie.

Ce répertoire regroupe les résultats de la collecte d'informations de 1986 qui fut réalisée par téléphone, courrier et visites aux mines. Quelques mines contactées n'avaient pas de projets en cours pour améliorer leur exploitation; quelques autres ne purent être convaincues des bénéfices que pourraient leur apporter les projets réalisés ailleurs. Leur réponse soulève la question: qu'est-ce que la recherche et comment diffère-t-elle des améliorations opérationnelles que chaque mine doit envisager quotidiennement? Aux fins de ce répertoire, tous les projets soumis ont été inclus.

Il n'existe pas deux mines identiques, mais elles partagent toutes certaines similitudes. La direction de plusieurs mines souterraines voit l'avantage de changer d'une méthode de minage sélective à une méthode en vrac. Il est possible de modifier complètement les méthodes à certaines mines; par contre, à d'autres endroits, la configuration du gisement ne peut le permettre que partiellement. Le bénéfice principal qui découle de telles modifications provient de la réduction des coûts suite à une production accrue et une réduction des travaux de développement. D'autres mines essaient de diminuer les coûts en augmentant le taux de productivité, en modifiant les systèmes de manutention des matériaux, en augmentant la mécanisation et en réduisant le nombre de zones de travail afin de concentrer le personnel. Quelles que soient les circonstances particulières, la majorité des mines essaient d'incorporer un ou plusieurs de ces concepts à leurs opérations. Ce rapport regroupe les projets en fonction des responsables de leur déroulement.

CANMET ne possède pas d'information détaillée sur les projets inclus dans ce répertoire. Pour de plus amples informations, le lecteur devra contacter la personne responsable du projet.

J.B. Vance
 Senior Mine Engineer
 (306) 652-2699

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>CATEGORY</u> <u>CATÉGORIE</u>
1. Mine automation.	11
2. Alternative mine air heating.	11 9
3. The reduction of friction and wear in mining machinery.	5
4. Commissioning of an automated ore grade monitoring system.	11
5. Monitoring of microseismic activity.	10
 <u>P. Mottahed</u>	
1. Potash cutting technology: basic research of the mining machine cutting elements.	5

Sherritt Gordon Mines Ltd.
Ruttan Operation
P.O. Box 1000
LEAF RAPIDS, Manitoba
R0B 1W0

K.D. Ball
Manager
(204) 473-2415

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>CATEGORY</u> <u>CATÉGORIE</u>
1. Communication system for isolated areas in mines.	1, 9
2. Secondary recovery of base metals by in-place leaching.	12

Tantalum Mining Corporation
of Canada Limited
P.O. Box 2000
LAC DU BONNET, Manitoba
R0E 1A0

R.A. Simard
Mine Superintendent
(204) 345-8658

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>CATEGORY</u> <u>CATÉGORIE</u>
1. Stress analysis resulting from pillar reduction in room & pillar mining utilized to establish new pillar pattern.	7, 10
2. Comparative button bit studies to determine the most appropriate 1 $\frac{3}{4}$ " rock bit for spodumene ore.	5, 7

Campbell Red Lake Mines Ltd.
P.O. Box 10
BALMERTOWN, Ontario
P0V 1C0

Tony Makuch
Senior Ground Control Engineer
(807) 735-2075

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>CATEGORY</u> <u>CATÉGORIE</u>
1. Microseismic monitoring.	10, 11
2. Mine wide seismic monitoring system for determining mechanisms of rockbursts.	10, 11
3. Rockbursts in sill and crown pillars; underground stress measurements to determine influence of backfill.	10, 11
4. Design of a new ventilation system.	9
5. Microcomputer based core logging system.	3
6. Microcomputer based survey calculation system.	9
7. Use of data collector for underground survey and integration to an IBM-AT surveying program.	9, 11
8. Computerized production of geological plans for use by shiftbosses.	9, 11
9. Destressing pillars for crown mining.	7, 10

Campbell Red Lake Mines Ltd.
 Detour Lake Mine
 130 Wilson Avenue
 TIMMINS, Ontario
 P4N 2S9

G. Alexa
 Personnel and Support Services Supt.
 (705) 245-3211

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>CATEGORY</u> <u>CATÉGORIE</u>
1. Experiences with a remote fly-in mining operation.	1

Denison Mines Limited
 Elliot Lake Operations
 P.O. Box B-2600
 ELLIOT LAKE, Ontario
 P5A 2K2

Peter Townsend
 Chief Industrial Engineer
 (705) 461-6138

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>CATEGORY</u> <u>CATÉGORIE</u>
1. Continuing search for and development of low profile (6.5 feet) mining equipment.	5
2. Development of a mining method for recovering pillars adjacent to delayed fill stopes.	7
3. Continuing program of large-scale underground testing of bacterially assisted leaching methods.	12
4. Testing methods for mining, drying and conveying high grade fines recovered from sumps.	5, 8
5. Use of consolidated fills for controlling violent pillar failures.	10
6. Evaluation of hydraulic drifters and feed rails.	5
7. Evaluation of aluminum body jacklegs.	5
8. Testing and development of 45 mm button bits.	5
9. Development and installation of portable underground concrete batch plant.	5
10. Development of survey data entry, calculation and plotting.	9, 11

Dome Mines Limited
 SOUTH PORCUPINE, Ontario
 P0N 1H0

R.J. Perry
 General Manager
 (705) 235-3221

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>CATEGORY</u> <u>CATÉGORIE</u>
1. Additive binders for cohesion and water reduction in dense fills.	10
2. Development and verification of computerized cut-and-fill panels design.	4, 10
3. Refinement of placement techniques for paste fills.	8, 10

Domtar Inc.
 Sifto Salt Division
 Goderich Mine
 North Harbour Road
 P.O. Box 370
 GODERICH, Ontario
 N7A 4C6

D. Bray
 Manager Maintenance, Planning & Eng.
 (519) 524-8351

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>CATEGORY</u> <u>CATÉGORIE</u>
1. Ground control research and testing.	10
2. Mechanical scaling.	5
3. Vacuum-Blower unit.	9

Falconbridge Limited
 ONAPING, Ontario
 P0M 2R0

Stan Bharti
 Supt. Mines Technical Services
 (705) 966-3411

PROJECT TITLE <u>TITRE DU PROJET</u>	CATEGORY <u>CATÉGORIE</u>
1. Improving hole accuracy of in-the-hole drilling through use of stabilizers and better machine alignment.	5
2. Improving productivities in cut-and-fill stopes through mechanized bolting and scaling.	5, 7
3. Pillar recovery in blasthole stopes against consolidated hydraulic fills.	7
4. Improvement of fill placement techniques to reduce cement content, segregation and dilution during pillar recovery.	10
5. Use of paste fills and other high modulus fills, state-of-the-art studies in progress.	10, 11
6. Use of microseismic monitoring at all the mines and linkage to a central control room for continuous monitoring on a 24-hour basis.	10, 11
7. Rockburst studies at Strathcona Mine jointly with CANMET and the Ontario government with emphasis on fault slip behaviour.	10
8. Development of 2-D and 3-D numerical modelling programs using the Distinct Element approach.	10, 11
9. Blast vibration monitoring in blasthole stopes when mining against back-fill.	10, 9
10. Selection and development of a geological database system for ore reserve calculations.	3, 11
11. Computerized surveying systems.	9, 11
12. Computer aided design for optimum mine planning.	4, 11

13. Trials with a mechanized scaling machine and a mechanized bolter/screener. 5
14. Establishing a central control room at Strathcona for hoists and other materials handling functions. 8, 9
15. Development of a tunnelboring machine for hardrock (HDRK project). 6, 5
16. Design of cablebolts in cut-and-fill and blasthole stopes (Project jointly with AMIRA in Australia). 10
17. Mechanized cablebolter for drilling and installing fully grouted cables in stope backs and walls at Fraser Mine. 5
18. Hydraulic hoisting of -3" ore up 2260 ft. at Onaping Mine (HDRK Project). 5, 8

Inco Limited
 Ontario Division
 COPPER CLIFF, Ontario
 POM 1N0

J.G. Kelly
 Manager Mines Research
 (705) 682-5261

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>CATEGORY</u> <u>CATÉGORIE</u>
1. Testing of "double-decked" crater blasting.	7
2. Microseismic monitoring.	10, 11
3. Investigation of iron ore blast furnace slag as a binding agent for fills.	10
4. Development of a 3-D numerical modelling system for rock mechanics.	10, 11
5. Jointly developing, with Spar Aerospace, remote controlled underground equipment to screen and bolt in recently blasted areas.	5, 11
6. High density fill.	8, 10
7. Continuous mobile ore removal system.	5, 8
8. 70 ton electric automated haulage truck.	5
9. The viability of blind shaft boring.	5, 6

Kidd Creek Mines Limited
P.O. Box 2002
TIMMINS, Ontario
P4N 7K1

T.R. Yu
Chief Engineer Mining R&D
(705) 267-2161

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>CATEGORY</u> <u>CATÉGORIE</u>
1. Loose rock sensing system for mechanized scaling.	5, 11
2. Two studies for using water under pressure for mining applications; one for cutting and slotting and one for secondary breakage.	7, 11
3. Pozzolanic property of Cu/Ni ground slag.	10
4. Phase II of a project to improve underground communication.	1
5. Implementing hydro-static drive of ST-8 Scooptram.	5
6. Mechanization of passive ground support system.	5, 10
7. Remote control for rockbreaking machines.	5, 11
8. Mechanized excavation in consolidated rockfill.	5, 7

LAC Minerals Limited
 Macassa Division
 P.O. Box 550
 KIRKLAND LAKE, Ontario
 P2N 3J7

Hans de Ruiters
 Area Engineer
 (705) 567-5208

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>CATEGORY</u> <u>CATÉGORIE</u>
1. Ventilation modifications : installation of three centrifugal fans.	9
2. Mine monitoring and control system for pumps, fans and heating system.	9, 11
3. Sprinkler system in #3 shaft in order to prevent the shaft timber from drying out.	9
4. Tailings reclamation using dredging and dry excavation.	3, 8
5. Installation of microseismics system to monitor rock bursts.	10, 11
6. Testing feasibility of replacing post in timbered drifts with cable slings.	2, 10
7. Longhole mining in narrow veins.	7
8. Waste heat recovery.	9
9. Cemented rockfill.	10
10. Auxiliary ventilation with centrifugal fans.	9

Lac Minerals
 Page-Williams Division
 P.O. Bag 500
 MARATHON, Ontario
 P0T 2E0

S.T. Brown
 Chief Engineer
 (807) 238-1100

PROJECT TITLE TITRE DU PROJET	CATEGORY CATÉGORIE
1. Testing a 3% cement and 2% flyash mix to bind a minus 5 inch crushed rock backfill.	10
2. Installing an automated cemented crushed rock backfill system for one man control and operation.	8, 10
3. Upgrade mine hoisting system to 6000 TPCD ore.	5, 8
4. Install and commission a gyratory crusher.	8, 12
5. Install and commission u/g radio communication.	1
6. Test a continuous loading system.	5, 8
7. Install and commission a slimes handling system for underground.	8, 9
8. Test a hydraulic longhole production drill.	5, 7
9. Test a high pressure (350 psi) ITH booster compressor for production stoping.	5, 7
10. Upgrade mine ventilation to 1,000,000 cfm.	9

Noranda Inc.
Lyon Lake Mines Ltd.
P.O. Box 190
IGNACE, Ontario
P0T 1T0

Manfred Lengwenus
Mine Superintendent

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>CATEGORY</u> <u>CATÉGORIE</u>
1. Optimization of underground stope blast design.	7, 4
2. Final stage of the development and testing of an ultra sonic survey probe for determining the contours of inaccessible open stopes or other mine openings.	9, 11
3. Development of novel ground monitoring instrumentation : recoverable stressmeter, holographic stressmeter and closure meter.	10, 11
4. Development of a rock mechanics ground control field data base for use in mine design and modelling techniques.	10
5. Construction of state-of-the-art microseismic system.	10, 11
6. Conduct subsidence studies in potash mining areas.	3, 10
7. Backfill studies of potash mines.	10
8. Development of a continuous mining machine for hard rock formations.	5, 11
9. Develop numerical modelling for mine design : primarily finite element methods and boundary element techniques will be used.	10, 11
10. Ground support optimization.	4, 10
11. Development of commercially viable instrumentation/computer systems for full wave microseismic source location and blast vibration monitoring.	10, 11
12. To review hard materials and novel processes suitable for application in hard rock cutting and mining.	5, 11
13. Remote control system and guidance system which would permit the operation of mining equipment without direct sight.	5, 11
14. Mine electrification.	5, 9

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>CATEGORY</u> <u>CATÉGORIE</u>
1. Technical and economic feasibility of using rock anchors to support a steeply dipping footwall.	2, 10
2. Surface geophysical coal exploration.	3
3. Obtention of more geotechnical and hydrogeological information from existing borehole logs by using data processing software developed for this purpose.	3
4. In-seam coal characterization.	3
5. Lasers in coal mining.	5, 11
6. Developing a cost-effective laboratory method of obtaining triaxial test data about the strength properties of rock and coal.	10
7. Robotics for mine control.	5, 11
8. Ground movements in coal mine.	10
9. Time-dependent behaviour of coal measure rocks.	4
10. Deformation and progressive failure of open pit highwalls.	10
11. Non-cable vehicle guidance.	5, 11

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>CATEGORY</u> <u>CATÉGORIE</u>
Elliot Lake Lab.	
1. Investigating mine stability and rock burst activity in mines and study the effect on computer models of alternate mine layout and extraction rates.	4, 10
2. Evaluate the quality and quantity of respirable dust produced in various mining activities; determine the magnitude and sources of noise and vibrations and monitoring techniques and identification of major sources of radiation and factors affecting the radiation release.	1, 9
3. Developing methods to treat, dispose of and stabilize inactive tailings piles.	3
4. Evaluation of pillar stability on a local and regional scale in Canadian hardrock mines and determination of pre-mining stresses in rockburst-prone mines.	10
5. Develop new seismic equipment and monitoring techniques for studying rockbursts in hardrock mines and carry out seismic studies.	10, 11
6. Combined study of radiation, dust and ventilation.	1, 9
7. Identification and quantification of major sources of noise and vibration in mines.	1, 9

Explosives Atmospheres Lab.

1. Certify flameproof equipment, gas detectors and fire-resistant materials used in explosive atmospheres. 1
2. Demonstrate diesel emission control devices in both the lab and underground. 1, 5
3. Evaluate, in the lab, sensors for the continuous monitoring/detection of methane, diesel contaminant, ventilation and spontaneous combustion. 1
4. Characterization of explosion hazard ferro-silica. 1
5. Monitoring the continuing compliance of apparatus and materials certified by EMR and maintain a certification history of EMR certified products. 1
6. Participation in the development of standards related to apparatus and materials for use in gassy underground mines. 1, 5

Explosives Research Lab.

1. Confirm safety characteristics of all explosives; provide technical advice on explosive manufacture, storage and transport and investigate accidents. 1
2. Verifying proposed United Nations classification procedures for incorporation into the Explosives Act and Regulations. 1

Canadian Mine Technology Laboratory

1. Developing rock bolting guidelines based on the latest technological data and analytical results. 10
2. Carry out analytical numerical modelling studies as part of applied ground control investigations. 10, 11
3. Developing field and laboratory methods, equipment and procedures to assess the suitability of rock formations for high level radioactive waste containment. 3

4. Testing a side-viewing television camera for use in small diameter drill holes. 5, 11
5. Develop new ore reserve evaluation methodologies and the ore reserves of specific mineral deposits. 3
6. Supporting research to increase potash recoveries. 4, 10
7. Maintaining a databank on current and developing mining technology. 1, 9
8. Develop and evaluate mineability and economic criteria for hardrock mining. 2
9. Developing a handbook for the safe and economic design of surface crown pillars. 4, 10
10. Haulage automation for open pit mine with integration of blending requirements. 3
11. To establish the strength, deformational and other properties of the rock types encountered in research investigations and to evaluate rock mass stability for surface crown pillars. 10

Contract Research

1. Theoretical model for predicting low velocity impact sensitivity bubble sensitized slurry explosion (Mining Resource Engineering Limited). 7, 11
2. Experimental verification of high velocity impact model for slurry explosives projectile impact (Mining Resource Engineering Limited). 7, 11
3. Evaluation of propagation sensitivity of commercial explosives in 15 cm diameter hole (Mining Resource Engineering Limited). 7, 11
4. To carry out field and laboratory testing, field measurements and numerical modelling of excavations in potash (Cominco Limited). 10, 11
5. Estimated preproduction and operating costs of mining small mineral deposits by underground methods (J.S. Redpath Limited). 2

6. Development, construction and testing of prototype accessories for automation of down-the-hole drill (Vadeko International). 5, 11
7. Determination of the viability of cavitating hydro impact (UP-T-223) (Teledyne Canada). 5, 11
8. Self instruction teaching package for the design and application of perimeter blasting in open pit mines (Queen's University). 1, 4
9. Regional subsidence related to potash mining (Central Canada Potash). 10
10. Research on microseismic technology (McGill University). 10
11. Sampling, field testing and modelling of a surface crown pillar, Les Mines Selbaie, Québec (C. Mirza Engineering). 10
12. Development of a state-of-the-art microseismic monitoring system (UP-N-204) (Noranda Research Centre). 10, 11
13. GEOROC : Technology transfer seminars for the potash industry (Re/Spec Limited). 1, 11
14. Design and development of blasthole depth measurement test set (Davis Engineering Limited). 7, 11
15. The development of a new semiconductor Alpha Portable Detection System (UP-T-234) (Thompson & Neilson). 11
16. Determination of the PAH partition ratio and nature of mutagens generated by catalytic purifiers (Laurentian University). 11
17. Computer blast design program evaluation for large diameter blasthole stopes underground (Mining Resource Engineering Limited). 7, 11
18. Examination of the 100% methanol or pilot diesel methanol engine as a power source for underground mines (Inco Limited). 5
19. Development of wire mesh particulate oxidizer traps using full additives (UP-E-183) (Engine Control Systems). 5
20. Compilation of systems development and adaptation phase of CANMET diesel emissions reduction (Part III) (Ontario Research Foundation). 5

21. Determination of turbulence effects on the severity of dust-air explosions (McGill University). 1
22. Examination of impact of polynuclear aromatic hydrocarbon explosion in underground mines (McMaster University). 1

Mineral Development Agreements

CANMET is the lead agency in Mineral Development Agreements, joint ventures of the Federal Government, mining companies and provincial governments, undertaken to support the mining industry. The agreements, supporting research and technology projects, acknowledge the importance of mining to the nation. A total of \$5,213,000 has been committed in agreements with four provinces and negotiations are currently underway in other areas to work out the details of projects worth approximately \$1,000,000. All the committed money is to be spent over the next three years on projects to meet specific problems in mines in various provinces (and by the provinces government). \$1,862,000 of the money is budgeted to be spent in the current fiscal year.

Ententes fédérale-provinciales

CANMET est le principal coordonnateur des Ententes fédérale-provinciales. ces plans conjoints du Gouvernement fédéral, des compagnies minières et des gouvernements provinciaux, afin de rendre l'industrie minière plus compétitive. Les ententes, générant des projets de recherches et de développement, reconnaissent l'importance des mines à l'échelle nationale. Un total de \$5,213,000 a été octroyé dans quatre provinces et des négociations sont présentement en cours pour définir les détails de projets évalués approximativement à \$1,000,000. Toutes les sommes accordées doivent être dépensées par les provinces au cours des trois prochaines années sur des projets devant répondre à des problèmes spécifiques de leurs mines. Au cours de la présente année fiscale, \$1,862,000 du budget doit être dépensé.

SECTION 2

Projects Listed by Categories

Liste des projets par catégorie

MINE INDEX CATEGORIES

1. ADMINISTRATION : Mine Administration includes manpower training and development, health and safety of employees, management organization, voice communication, data communication, remote monitoring and labour relations.

2. FEASIBILITY : Mine Feasibility includes economic studies, mine evaluations, cost estimations and other projects undertaken to determine the potential success of major capital expenditures to develop a new mine, rehabilitate an old mine or expand an existing mine for increased production or better productivities.

3. SURFACE TECHNOLOGY : Surface Technology includes prospection, exploration, sampling, modelling, geostatistics, hydrology and geotechnology. It will also include projects dealing with environmental subjects, waste management, dewatering and other site work such as roads, bridges, dams and runways.

4. DESIGN : Mine Design includes selecting stope and pillar patterns and mining methods for new mines or for existing operations that are to be modernized or expanded. The category also includes planning, scheduling and grade control.

5. EQUIPMENT : Equipment includes equipment design, selection and maintenance as well as installed and consumable supplies.

6. DEVELOPMENT : Development includes methods of advancing mine and stope access headings leading to the fragmentation and removal of the muck to the haulage system.

7. PRODUCTION : Stopping includes operational topics such as fragmentation, blast pattern design, drilling methods, explosives and all other matters connected to preparing a block of ore, either a stope or a pillar, for drilling and blasting and removal of the fragments to the haulage system.

8. MATERIALS HANDLING : Materials Handling includes the movement of fragmented material, from stope or development heading, via loading/transportation systems, grizzlies, rock-breakers, ore passes, crushers, surge and storage bins and loading pockets to surface.

9. SERVICES : Mine Services include ventilation, surveying, compressed air, dewatering systems, air heating, hoisting plant (hoist, headframe, shaft conveyances and all shaft installations) and electrical supply, control and distribution.

10. GROUND CONTROL : Ground Control includes rock mechanic studies, ground support mechanisms and ground support preparation, placement and installation.

11. HIGH TECH : High Tech includes computers, robotics, water jets or other new and innovative topics.

12. PROCESSING : Processing includes general milling operations, mill recoveries, concentrate grades, reagent consumption etc. as well as in-situ and heap leaching operations on surface or underground, and recovering economic values from tailings and waste dumps.

CATÉGORIES DU RÉPERTOIRE

1. ADMINISTRATION : Inclut l'entraînement du personnel, santé et sécurité des employés, communications orales, transmission de données et relations de travail.

2. FAISABILITÉ : Comprend les études économiques, évaluation minière, estimation des coûts et autres projets entrepris afin de déterminer le succès potentiel d'un investissement majeur pour développer un nouveau gîte, réouvrir une ancienne mine ou l'expansion d'une mine déjà existante afin d'accroître la production ou la productivité.

3. TECHNOLOGIE DE SURFACE : Prospection, exploration, échantillonnage, modélisation, géostatistique, hydrologie et géotechnologie. Comprend également les projets touchant l'environnement, disposition des résidus miniers, drainage et autres travaux de surface tels: routes d'accès au site, ponts et digues.

4. CONCEPTION : Inclut la configuration des chantiers et piliers et les méthodes de minage pour des nouvelles mines ou pour des opérations à moderniser ou expansionner. Cette catégorie inclut en plus les activités de planification, cédulation et ajustement des teneurs.

5. ÉQUIPEMENT : Inclut la conception, la sélection et l'entretien d'équipement mobile ou stationnaire et pièces.

6. DÉVELOPPEMENT : Méthodes de développement des accès dans la mine et aux chantiers, et moyens de briser et évacuer la roche dans le système de halage.

7. PRODUCTION : Inclut les opérations de minage telles: fragmentation, conception de patrons de sautage, méthodes de forage, explosifs et autres opérations reliées à la préparation d'un bloc de minerai pour forage, sautage et manutention du matériel dans le système de halage.

8. MANUTENTION DES MATÉRIAUX : Inclut le mouvement du roc fragmenté à partir des chantiers ou ouvrages de développement, via systèmes de transport/chargement, grizzlis, marteaux pneumatiques, cheminées à minerai, concasseurs, silos à minerai et points de soutirage jusqu'en surface.

9. SERVICES : Ventilation, arpentage, air comprimé, système de drainage, chauffage de l'air, chambre de treuil (treuil, chevalement, installations du puits), système de distribution et contrôle électrique.

10. SOUTÈNEMENT: Inclut les études en mécanique des roches, soutènement minier, préparation au soutènement et installation du soutènement.

11. TECHNOLOGIE DE POINTE : Inclut l'utilisation des ordinateurs, la robotique ainsi que tout autre sujet d'innovation.

12. MINÉRALURGIE : Inclut le traitement en général: récupération, teneur des concentrés, consommation de réactifs, etc. Comprend également la lixiviation en place ou en tas à la surface ou en souterrain, de même que la récupération de valeurs économiques contenues dans les haldes de stériles et bassins de résidus.

1. ADMINISTRATION

	<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
1.	Measurement of the permeability of protective clothing to gases, vapours and liquids.	93
2.	Identification and size-fraction counting of biological contaminants such as mould and bacteria, in the workplace atmosphere.	93
3.	Assistance on selection of respiratory protective devices and on set-up and administration of a respiratory protection program.	93
4.	Presentation of education workshops on chemical handling, industrial hygiene and toxicology.	93
5.	Determination of gas concentrations on-site using sensitive continuous monitoring techniques.	93
6.	Measurement of airborne dust concentrations and particle size fractions using area and personal sampling devices.	93
7.	Development of PNET program for project scheduling.	66
8.	Examination of sulphide dust explosions in Canadian mines.	66
9.	Underground computer terminals for shift boss reporting.	10
10.	Leaky cable underground communication system.	10
11.	Develop a lift check device to lock scooptram dump and roll cylinders.	10
12.	Introduction of fire resistant hydraulic fluids.	10
13.	Coal dust suppression at the thermal dryer using chemical sprays.	7
14.	Evaluation of non-destructive testing of hoisting rope.	110
15.	Verifying proposed United Nations classification procedures for incorporation into the Explosives Act and Regulations.	113

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
16. Confirm safety characteristics of all explosives; provide technical advice on explosive manufacture, storage and transport and investigate accidents.	113
17. Certify flameproof equipment, gas detectors and fire-resistant materials used in explosive atmospheres.	113
18. Monitoring the continuing compliance of apparatus and materials certified by EMR and maintain a certification history of EMR certified products.	113
19. Characterization of explosion hazard ferro-silica.	113
20. Evaluate, in the lab, sensors for the continuous monitoring/detection of methane, diesel contaminant, ventilation and spontaneous combustion.	113
21. Participation in the development of standards related to apparatus and materials for use in gassy underground mines.	113
22. Demonstrate diesel emission control devices in both the lab and underground.	113
23. Evaluate the quality and quantity of respirable dust produced in various mining activities.	112
24. Identification and quantification of major sources of noise and vibration in mines.	112
25. Determine the magnitude and sources of noise and vibrations and monitoring techniques and identification of major sources of radiation and factors affecting the radiation release.	112
26. Maintaining a databank on current and developing mining technology.	114
27. Combined study of radiation, dust and ventilation.	112
28. Evaluation of pillar stability on a local and regional scale in Canadian hardrock mines and determination of pre-mining stresses in rockburst-prone mines.	112

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
29. Examination of impact of polynuclear aromatic hydrocarbon explosion in underground mines (McMaster University).	116
30. Determination of turbulence effects on the severity of dust-air explosions (McGill University).	116
31. Self instruction teaching package for the design and application of perimeter blasting in open pit mines (Queen's University).	115
32. GEOROC : Technology transfer seminars for the potash industry (Re/Spec Limited).	115
33. Underground radio communications.	41
34. Direct data entry by front line supervisor.	41
35. Phase II of a project to improve underground communication.	35
36. The measurements of whole body vibration and its effects on underground load-haul-dump operators in underground mining environments.	96
37. Miner's worksuit made with a comfortable water-resistant fabric.	97
38. New lightweight and highly protective workboot.	97
39. Report of evaluation of underground radio.	97
40. Successfully tested air flow helmet (featuring dust protection).	97
41. Experiences with a remote fly-in mining operation.	28
42. Diesel emissions in underground mines.	117
43. Modélisation de la productivité d'une machine seule, de l'interaction homme-machine et d'un système de machines.	82
44. Influence de diverses variables, dont la prime au rendement, sur la productivité minière souterraine au Québec.	89

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
45. Simulation of mine operating decisions.	85
46. Small scale mining potential and policy options in selected African countries.	85
47. Remote surveillance of plant entrances.	43
48. Sous-programme d'ordinateur (intégré au programme actuel) pour suggérer au répartiteur la destination optimale d'un camion libre dans une mine à ciel ouvert.	45
49. Développement de grades d'amiante chrysotile de remplacement.	45
50. Programme de gestion et de contrôle de l'usine des rails.	61
51. Communication systems for underground workers.	47
52. Gestion informatisée des titres miniers.	119
53. Impact de divers paramètres quantifiables sur la productivité en souterrain.	104
54. Influence des facteurs organisationnels sur la sécurité du travail.	104
55. Étude de l'impact des lois sur la santé et la sécurité du travail et la fréquence des réclamations à la CSST.	104
56. Pay scheme, based on training and job rotation, of the man carrying the rate not the job.	65
57. Install and commission u/g radio communication.	37
58. Developments in coal mine fire control.	109
59. Evaluation of an underground mine monitoring system.	109
60. Communication system for isolated areas in mines.	25

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
61. Conceptual design of a new method of achieving rigidity of ventilation duct after installation.	92
62. Bavettes sur foreuses de 4.5 pouces de diamètre pour réduire le brouillard.	52
63. Modification des sièges et suspension sur les chargeuses-navettes et camions de halage pour prévenir les maux de dos.	52
64. Amélioration du système de lumière de circulation dans les rampes.	52
65. Analysis of the true rate of return project evaluation criteria.	72
66. Sulphide dust explosion in Canadian mines - A fine particle approach.	72
67. White finger disease prevention - Preliminary study.	72
68. Underground handset communication system.	94
69. Computerized communication system on trucks in an open pit.	94
70. White finger disease prevention - Preliminary study.	74
71. The lifetimes and pathways of the PAH's and mutagens in dieselized underground mines.	74
72. Mining research delivery agency database.	98
73. Development of a mine services software system.	62

2. FEASIBILITY / FAISABILITÉ

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
1. Ajax zone mine feasibility study.	5
2. Computer program for estimating capital & operating costs.	67
3. Economics of mining zeolites.	67
4. Economics of mining wollastonite.	67
5. Universal kriging applied to mineral commodity price forecasting.	67
6. Open pit simulation studies.	75
7. Computerized open pit feasibility and design.	75
8. Expert system for risk analysis in mine feasibility.	76
9. Develop and evaluate mineability and economic criteria for hardrock mining.	114
10. Estimated preproduction and operating costs of mining small mineral deposits by underground methods (J.S. Redpath Limited).	114
11. Modélisation écologique et environnementale en milieu aquatique pour la mise en valeur des ressources minérales.	87
12. Prévision des coûts de forage pour les exploitation minières souterraines.	83
13. Influence de diverses variables, dont la prime au rendement, sur la productivité minière souterraine au Québec.	89
14. Simulation of mine operating decisions.	85
15. Risk analysis in mining investments.	85
16. Optimization of mine development and operating variables.	85

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
17. Development of micro computer software to evaluate new mine investment proposals.	85
18. Small scale mining potential and policy options in selected African countries.	85
19. Rehabilitation of old mines.	86
20. Étude de faisabilité d'un rideau d'étanchéité pour réduire les venues d'eau.	43
21. Étude de productivité des opérations d'une mine à ciel ouvert en fonction de la fragmentation du roc et du coût des explosifs.	44
22. Influence de diverses variables, dont la prime au rendement, sur la productivité minière souterraine.	119
23. Développement d'un logiciel de planification minière assistée par ordinateur.	119
24. Estimating the capital and operating costs of mining small mineral deposits by underground methods.	101
25. In-situ oilsands recovery.	109
26. Investigation of the characteristics and properties of Nova Scotia oil shales.	91
27. Computer program for estimating operating costs for underground mines.	95
28. Analysis of the true rate of return project evaluation criteria.	72
29. Projet "Lac Chib" : forage de 2 trous de surface de 6800 pieds chacun.	51
30. Testing feasibility of replacing post in timbered drifts with cable slings.	36

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
31. Hydraulic reclaim using E.C.C. water monitors and slurry pumps to recover gold from refractory tailings deposited on surface over 39 years of operation.	12
32. Highwall stability plains open pit coal mines.	108
33. Technical and economic feasibility of using rock anchors to support a steeply dipping footwall.	107
34. Mise en valeur du projet Isle-Dieu : étude d'un système entièrement électrique.	59
35. Rotary breaker reject crushing and feeding to the preparation plant for coal processing.	16

3. SURFACE TECHNOLOGY / TECHNOLOGIE DE SURFACE

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
1. Core sampler for oil sands and heavy oil formations.	68
2. The long-term use of flow-through rock drains in coal mine waste dumps.	11
3. Evaluation of various methods of resloping large coal mine waste dumps to allow for final revegetation.	11
4. Determining geotechnical & hydrogeological properties of overburden in oil sands mining using downhole geophysics.	11
5. Application of geostatistics to ore reserve estimations at the Venus Mine, Yukon Territory.	67
6. Tailings dam construction.	13
7. Lake dewatering.	13
8. Overburden dewatering.	13
9. Sub-aerial tailings deposition.	15
10. Methods to stabilize permafrost.	10
11. Use of unconsolidated runoff material in coal waste dump reclamation.	7
12. Restoration of coal refuse storage sites.	7
13. Waste dump height determination as a function of reclamation and haulage costs.	7
14. Soil nitrogen dynamics on industrially damaged and revegetated sites.	74
15. Overburden stabilization.	21
16. Mine waste heat recovery.	21

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
17. Overburden stabilization.	110
18. Reconciliation of grade control and production statistics with geostatistically defined ore reserves and mineral inventories.	76
19. Developing methods to treat, dispose of and stabilize inactive tailings piles.	112
20. Developing field and laboratory methods, equipment and procedures to assess the suitability of rock formations for high level radioactive waste containment.	113
21. Haulage automation for open pit mine with integration of blending requirements.	114
22. Develop new ore reserve evaluation methodologies and the ore reserves of specific mineral deposits.	114
23. Selection and development of a geological database system for ore reserve calculations.	32
24. Development of remote manipulation of a scanning device for mapping inaccessible openings.	97
25. Processes for obtaining environmentally safe uranium mill tailings.	71
26. Les analyses par différentes méthodes pour le contrôle des teneurs de minerais.	87
27. Hydrogéologie des exploitations minières au voisinage de zones de cisaillement.	87
28. Bilans hydrogéologiques dans un parc à résidus miniers.	82
29. Évolution des propriétés hydrauliques des agrégats routiers.	82
30. Influence du scellement sur le niveau d'eau fourni par un piézomètre.	82

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
31. Interactions hydrauliques-mécaniques dans les essais de perméabilité en place : essais ponctuels et essais de pompage.	82
32. Blast fragmentation studies.	86
33. Rehabilitation of old mines.	86
34. Modélisation géostatistique d'un gisement d'amiante.	43
35. Plan de la nappe phréatique entourant le gisement.	43
36. Traitement des eaux souterraines pour réduire les besoins de bassins de décantation et évacuer les boues.	44
37. Revégétation des haldes à résidus miniers et application des boues provenant des eaux usées d'une usine d'épuration.	45
38. Études des différentes alternatives de drainage du mur est de la mine Black Lake.	44
39. Trous de drainage périphérique pour abaisser la nappe phréatique et installation d'un système de contrôle du mouvement des murs en continu.	61
40. Application de la géostatistique à un modèle tridimensionnel et son transfert technologique à l'UQAT.	118
41. Guide des techniques d'évaluation des gisements d'or.	120
42. La restauration des parcs à résidus miniers.	119
43. Détermination des paramètres des structures rocheuses à la mine Tio.	120
44. Modélisation numérique et validation d'un gisement géologique (QIT).	119
45. La modélisation numérique de la géologie et la minéralisation du projet Djebba en Tunisie.	119

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
46. La modélisation numérique de la géologie et la minéralisation de la zone S-3 des Mines Camchib Inc.	119
47. Conduct subsidence studies in potash mining areas.	106
48. Geostatistical ore reserve modelling for diamond drill and blast hole drill assays with computer graphic and plotter displays.	6
49. Reclamation work on tailings dam and waste dumps including re-sloping and seeding.	6
50. Reclaimed strip mine subsidence.	79
51. Engineering geology of western Saudi Arabia for road tunnels.	79
52. Waste management for oil sands mines.	79
53. Development of an Expert System for geophysical log interpretation.	79
54. Flow in rock and concrete fractures.	79
55. Remote sensing for mine engineering geology.	80
56. Uranium tailings and groundwater.	79
57. Deep brines in the shield.	80
58. Protection covers for sulphide tailings.	80
59. Acid fluid generation from pyritic mine waste.	80
60. Blast casting.	109
61. Operation research (computer simulation and field data collection).	109
62. Spontaneous combustion.	109

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
63. Geotechnical Engineering.	109
64. Ensemencement des haldes minières à l'aide des boues d'une usine d'épuration.	81
65. Échantillonnage des boues de forage permettant une meilleure définition des teneurs dans les chantiers.	52
66. Projet "Lac Chib" : forage de 2 trous de surface de 6800 pieds chacun.	51
67. Travail sur échantillonneur, à la décharge du convoyeur no 4, pour comparaison avec la teneur calculée au raffinage.	55
68. Microcomputer based core logging system.	27
69. Contrôle en continu des valeurs aurifères.	54
70. Tailings reclamation using dredging and dry excavation.	36
71. Removal of high (over 20 m) post-pillars from an existing open room and pillar stoping area (equipment and ground control considerations).	14
72. Modélisation numérique des dépôts pour permettre l'optimisation des réserves et un meilleur contrôle sur la teneur.	60
73. Large scale heap leaching of low grade ore.	39
74. Obtention of more geotechnical and hydrogeological information from existing borehole logs by using data processing software developed for this purpose.	107
75. In-seam coal characterization.	107
76. Surface geophysical coal exploration.	107
77. Tailings dam construction	16

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
78. Radionuclides in mammals living in the drainage of uranium mine tailings.	74
79. Environmental metal residues in crustacean tissues.	74
80. Mineral exploration applications of geobotanical remote sensing.	74

4. DESIGN / CONCEPTION

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
1. Design criteria for pillars in coal mines.	68
2. Most likely tension crack position in plane shear slope failure.	68
3. Short range planning model.	11
4. Development of PNET program for project scheduling.	66
5. Coal blending computer model for improved mine planning.	66
6. Development of a file of mine planning computer models compatible with the IBM-PC.	66
7. Analysis of in-pit crushing and conveying in open pit mines as alternative to conventional truck/ shovel system.	67
8. Application of rock mechanics methods for the design of underground mines.	67
9. Mining 30° dip orebodies with trackless equipment.	15
10. The influence of rock mechanics considerations on mine design and short and long term stability.	15
11. Waste dump height determination as a function of reclamation and haulage costs.	7
12. VCR ore extraction.	8
13. Underground computer assisted design.	110
14. Mining method selection, blast design and layout for flat dipping orebody.	20
15. Mine design CADD system.	20

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
16. Bacterial-Leach assisted mining.	20
17. Designing a brine pumping system to handle the 6 to 10% moisture expected to drain from backfill.	63
18. Developing computer software for complete mine design and planning.	63
19. Computerized open pit feasibility and design.	75
20. Open pit simulation studies.	75
21. Pit slope stability studies.	75
22. Evaluation of membrane barrier installations for retardation of radon gas inflows within mining/ residential environments.	75
23. Long term subsidence prediction in potash extraction operations based on field monitoring/ laboratory measurement/ computer modelling studies.	75
24. Reconciliation of grade control and production statistics with geostatistically defined ore reserves and mineral inventories.	76
25. Open pit mine design and production scheduling using microcomputers and CAD systems.	75
26. Underground stope layout and mine design using microcomputers and CAD systems.	75
27. Computer applications in underground mine design.	76
28. Continuous materials handling systems - Design and feasibility in medium sized hardrock mines.	76
29. Studies in mine sequencing in deep narrow vein deposits to minimize stress induced ground control problems.	76

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
30. Development and verification of computerized cut-and-fill panels design.	30
31. Investigating mine stability and rock burst activity in mines and study the effect on computer models of alternate mine layout and extraction rates.	112
32. Supporting research to increase potash recoveries.	114
33. Developing a handbook for the safe and economic design of surface crown pillars.	114
34. Self instruction teaching package for the design and application of perimeter blasting in open pit mines (Queen's University).	115
35. Computer aided design for optimum mine planning.	32
36. Bulk mining study.	117
37. Optimisation des contours des exploitations à ciel ouvert.	82
38. Prévision des effets de l'utilisation des rejets de sel comme matériau de remblayage sur l'affaissement de surface des mines de sel domal.	83
39. Évaluation du potentiel de coups de toit d'une mine.	83
40. Programme d'éléments finis pour la conception des mines.	83
41. Preparation of a "Technical guide for grouted cable-bolts used as ground support".	89
42. Improvement of subroutine DISCO (solving of principal stresses along discontinuity planes) to account for progressive failure, blasting effects and randomly distributed spacings and sizes of discontinuities.	89
43. Création d'une station CAO/DAO et intégration dans l'enseignement des techniques.	89

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
44. Optimisation de la planification de la production des mines à ciel ouvert.	90
45. Développement de systèmes experts pour la sélection de l'équipement dans les mines à ciel ouvert.	90
46. Expert system development for mine design/control.	85
47. Stability of gate roadways in underground coal mines.	86
48. Optimization of underground mine design.	86
49. Computerized open pit design.	86
50. Mesure des mouvements verticaux d'un banc par nivellement hydraustatique.	43
51. Informatisation de la conception et planification.	43
52. Design de puits optimal et planification minière par micro-ordinateur.	45
53. Séquence de minage des réserves dans un secteur sujet à des coups de terrain.	50
54. Purchase of computer equipment as well as consistent software in mining.	50
55. Influence de diverses variables, dont la prime au rendement, sur la productivité minière souterraine.	119
56. Conception de patrons de sautage.	118
57. Les propriétés physiques et mécanique des remblais souterrains et leur influence sur la conception des chantiers souterrains. (M.J. Scoble- McGill).	118
58. Conception des piliers de surface à la mine Chimo.	118

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
59. Développement d'un système de planification par graphisme interactif à 3-D.	118
60. Étude de cas en conception et planification de fosse à ciel ouvert avec le logiciel PC-Mine.	120
61. Optimization of underground stope blast design.	106
62. Ground support optimization.	106
63. Design of crown pillars.	104
64. Underground testing of a mining method for a very high grade uranium deposit.	18
65. Input parameters for numerical modelling of potash strata	22
66. Sub-level open stoping being introduced on 4105 level.	40
67. Sub-level caving will be started below 3510 level.	40
68. Update interactive short to long range planning system for use on IBM-PC/AT workstation.	6
69. Computerized surveying system for EDM using Autocad to update mine plan and store survey pick-ups.	6
70. Salt rock geomechanics for mine design.	80
71. Operation research (computer simulation and field data collection).	109
72. Blast casting.	109
73. Off-highway truck selection in surface coal mining.	109
74. Equipment selection.	109

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
75. Productivity and equipment selection in surface mining of oil sands.	109
76. Field and laboratory testing, field measurements and numerical modelling of excavations in potash.	19
77. Optimization of the size of drift and its practical application.	72
78. Dimensionnement de piliers et chantiers.	46
79. Methane prediction and control.	121
80. Ventilation performance.	121
81. Dust control.	121
82. Continuing development of mining techniques in ice and permafrost.	14
83. Concrete design and construction methods in arctic conditions.	14
84. Computerized tracking of mine ores and grades.	42
85. Utilisation du logiciel de planification minière PC-Mine.	60
86. Time-dependent behaviour of coal measure rocks.	107
87. Interactive short and long term open pit computer mine planning system.	16
88. Assessment of computer assisted truck optimization systems.	16

5. EQUIPMENT / ÉQUIPEMENT

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
1. Completion of hoist design computer program for drum, friction and Blair hoists.	66
2. Research on ceramic filters and their use underground to clean diesel exhaust.	66
3. Haulage truck fuel efficiency study.	13
4. Rubber truck box.	13
5. Shovel payload weighing system.	13
6. Mining 30° dip orebodies with trackless equipment.	15
7. Sub-aerial tailings deposition.	15
8. Mechanical mining machines: shafts, raises, drifts.	10
9. Introduction of fire resistant hydraulic fluids.	10
10. Develop a lift check device to lock scooptram dump and roll cylinders.	10
11. Explosives customizing to give greater gap sensitivity and less power for perimeter blasting.	10
12. Cermet bit inserts for gauge buttons.	10
13. Field testing 4.5 inch and 3.5 inch in-the-hole up-hole drilling system.	10
14. Four inches sandfill butterfly valve.	21
15. Evaluation of non-destructive mine shaft rope testing devices.	21
16. Polyurethane applications for material and equipment in the underground environment.	21

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
17. Sound and vibration suppression on compressed air equipment (jacklegs and stopers).	21
18. Drawpoint pneumatic barricade bags.	21
19. Evaluation of non-destructive testing of hoisting rope.	110
20. Designing a brine pumping system to handle the 6 to 10% moisture expected to drain from backfill.	63
21. Participation in the development of standards related to apparatus and materials for use in gassy underground mines.	113
22. Demonstrate diesel emission control devices in both the lab and underground.	113
23. Testing a side-viewing television camera for use in small diameter drill holes.	114
24. Examination of the 100% methanol or pilot diesel methanol engine as a power source for underground mines (Inco Limited).	115
25. Development of wire mesh particulate oxidizer traps using full additives (UP-E-183) (Engine Control Systems).	115
26. Compilation of systems development and adaptation phase of CANMET diesel emissions reduction (Part III) (Ontario Research Foundation).	115
27. Development, construction and testing of prototype accessories for automation of down-the-hole drill (Vadeko International).	115
28. Determination of the viability of cavitating hydro impact (UP-T-223) (Teledyne Canada).	115
29. Evaluation of hydraulic drifters and feed rails.	29
30. Evaluation of aluminum body jacklegs.	29

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
31. Development and installation of portable underground concrete batch plant.	29
32. Continuing search for and development of low profile (6.5 feet) mining equipment.	29
33. Testing and development of 45 mm button bits.	29
34. Testing methods for mining, drying and conveying high grade fines recovered from sumps.	29
35. Low profile two boom hydraulic drill jumbo's.	41
36. Deep level conveyor hoisting from several loading points with grizzlies and rock breakers.	41
37. Containerized materials handling.	41
38. Scoop modification for 6-way bulldozer blade.	41
39. Raise elevators.	41
40. Low profile roofbolting and screening platform.	41
41. Development of trailer for the movement of large underground equipment.	41
42. Improving hole accuracy of in-the-hole drilling through use of stabilizers and better machine alignment.	32
43. Trials with a mechanized scaling machine and a mechanized bolter/screener.	33
44. Mechanized cablebolter for drilling and installing fully grouted cables in stope backs and walls at Fraser Mine.	33
45. Improving productivities in cut-and-fill stopes through mechanized bolting and scaling.	32

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
46. Hydraulic hoisting of -3" ore up 2260 ft. at Onaping Mine (HDRK Project).	32
47. Development of a tunnelboring machine for hardrock (HDRK project).	33
48. Mechanical scaling.	31
49. Implementing hydro-static drive of ST-8 Scooptram.	35
50. Mechanized excavation in consolidated rockfill.	35
51. Mechanization of passive ground support system.	35
52. Loose rock sensing system for mechanized scaling.	35
53. Remote control for rockbreaking machines.	35
54. The measurements of whole body vibration and its effects on underground load-haul-dump operators in underground mining environments.	96
55. Vibration dampening on hand held pneumatic rock drilling machines.	96
56. Guidelines for underground rail haulage.	96
57. 70 ton electric automated haulage truck.	34
58. The viability of blind shaft boring.	34
59. Continuous mobile ore removal system.	34
60. Jointly developing, with Spar Aerospace, remote controlled underground equipment to screen and bolt in recently blasted areas.	34
61. Successfully tested air flow helmet (featuring dust protection).	97
62. Development of remote manipulation of a scanning device for mapping inaccessible openings.	97

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
63. A 12 volts halogen cap lamp.	97
64. Vibration protection (hand-held drills)	97
65. Noise abatement drills.	97
66. ANFO loading.	97
67. Cable bolt grouting.	97
68. Remote scoop retrieval system.	38
69. Diesel emissions in underground mines.	117
70. Évaluation du potentiel du vérin Goodman les massifs élastoviscoplastiques.	83
71. Mise au point d'un système de télécommande en vue de l'opération de l'équipement minier souterrain sans visibilité du site de travail.	83
72. Télésurveillance des chargeurs-transporteurs.	83
73. Automatisation de l'opération d'un brise-roches par rétroaction visuelle.	83
74. Simulation des systèmes pelles-camions.	90
75. Monitoring machine breakage of rock.	85
76. Machine à avance en continu (continuous miner).	53
77. Essai de foreuse "Roger" pour forage de monterie à petit et moyen diamètre.	53
78. Essai d'un système de chargement en vrac pour émulsions dans des trous de petit diamètre.	53

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
79. Opération simultanée de 2 marteaux-piqueurs contrôlés par un seul opérateur.	44
80. Robotisation des chargeuses-navettes (scooptrams).	44
81. Purchase of computer equipment as well as consistent software in mining.	50
82. Mini-foreuse long-trous électrique - hydraulique.	50
83. Fabrication d'un jumbo hydraulique électrique à petit diamètre (1½ à 1⅝ ") à partir de composantes déjà existantes.	50
84. Influence des paramètres climatiques sur les problèmes de "pompage" du ventilateur principal.	50
85. Scaler machine in underground mine.	47
86. Tunnel boring machine.	47
87. Répertoire des équipements miniers dans le monde.	120
88. Développement de la foreuse Roger : essais à la mine Bousquet.	118
89. Mine electrification.	106
90. Development of a continuous mining machine for hard rock formations.	106
91. To review hard materials and novel processes suitable for application in hard rock cutting and mining.	106
92. Remote control system and guidance system which would permit the operation of mining equipment without direct sight.	106
93. The reduction of friction and wear in mining machinery.	24
94. Potash cutting technology: basic research of the mining machine cutting elements.	24

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
95. Install a second drive motor to the winze hoist.	40
96. Equip the No. 2 shaft hoist with a pinion brake.	40
97. Winder-Tensioner device for installing and tensioning hoist ropes.	101
98. Tunnel boring machine for boring tunnels of 2 m to 2.5 m in diameter.	101
99. Redpath/Robbins shaft boring machine for boring shafts of 6 m to 7.3 m in diameter.	101
100. Test a high pressure (350 psi) ITH booster compressor for production stoping.	37
101. Test a hydraulic longhole production drill.	37
102. Upgrade mine hoisting system to 6000 TPCD ore.	37
103. Test a continuous loading system.	37
104. Off-highway truck selection in surface coal mining.	109
105. Equipment selection.	109
106. Productivity and equipment selection in surface mining of oil sands.	109
107. A strategy for measuring off-highway rolling resistance.	109
108. Truck management systems review.	109
109. Alternative face cutting systems for longwall mining.	109
110. Development and validation of the truck and shovel computer model.	109
111. Development, construction and testing of prototype accessories for automation of DTH drills.	103

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
112. DS-25 mobile scaler : a diesel powered unit mounted on an underground service vehicle chassis.	102
113. Determination of the technical viability of cavitating impact.	102
114. Sealing of curb ring against the shaft walls.	92
115. Narrow vein mining : conceptual design of new stoping method and mechanization of stoping operations.	92
116. Blasthole cleaning and dewatering apparatus.	91
117. Bavettes sur foreuses de 4.5 pouces de diamètre pour réduire le brouillard.	52
118. Modification des sièges et suspension sur les chargeuses-navettes et camions de halage pour prévenir les maux de dos.	52
119. Programme d'entretien préventif de l'équipement diésel souterrain.	52
120. Chemo-abrasive water jet cutting of rocks.	72
121. Design and testing of respirator efficiency.	73
122. Evaluation d'une mini chargeuse-navette électrique (80 cm de large).	51
123. Etude de faisabilité de télécommande sur Cavo 310 et 320.	58
124. Étude comparative de productivité et de performance d'une foreuse électrique-hydraulique à une flèche et d'une foreuse pneumatique à trois flèches.	57
125. Water jet assisted cutting.	121
126. Comparative button bit studies to determine the most appropriate 1 $\frac{3}{4}$ " rock bit for spodumene ore.	26

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
127. Concrete design and construction methods in arctic conditions.	14
128. Evaluation of non-destructive hoist rope testing equipment.	122
129. Robotics for mine control.	107
130. Lasers in coal mining.	107
131. Non-cable vehicle guidance.	107
132. Assessment of computer assisted truck optimization systems.	16
133. Shovel/truck load weighing systems	16
134. Use of a conveyor system to transport raw coal from the pit areas to the breaker station.	16

6. DEVELOPMENT / DÉVELOPPEMENT

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
1. Development of a tunnelboring machine for hardrock (HDRK project).	33
2. The viability of blind shaft boring.	34
3. In situ stress measurement in 1305-W drift.	50
4. Tunnel boring machine.	47
5. Tunnel boring machine for boring tunnels of 2 m to 2.5 m in diameter.	101
6. Redpath/Robbins shaft boring machine for boring shafts of 6 m to 7.3 m in diameter.	101
7. Sealing of curb ring against the shaft walls.	92
8. Approfondissement du puit de Cedar Bay (1455') et installation d'une nouvelle salle d'extraction.	51
9. Mise en valeur du projet Isle-Dieu : étude d'un système entièrement électrique.	59

7. PRODUCTION

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
1. Demonstration and evaluation of blast casting in a producing Canadian surface coal mine.	11
2. Sub-level retreat mining with waste fill.	15
3. Continuing research on explosives and explosives technology.	10
4. Field testing 4.5 inch and 3.5 inch in-the-hole up-hole drilling system.	10
5. VCR ore extraction.	8
6. Overburden stabilization.	21
7. Mining method selection, blast design and layout for flat dipping orebody.	20
8. Tertiary recovery adjacent to unconsolidated backfill.	20
9. Control blasting.	75
10. Fragmentation control through blasting.	76
11. Theoretical model for predicting low velocity impact sensitivity bubble sensitized slurry explosion (Mining Resource Engineering Limited).	114
12. Experimental verification of high velocity impact model for slurry explosives projectile impact (Mining Resource Engineering Limited).	114
13. Evaluation of propagation sensitivity of commercial explosives in 15 cm diameter hole (Mining Resource Engineering Limited).	114
14. Design and development of blasthole depth measurement test set (Davis Engineering Limited).	115
15. Computer blast design program evaluation for large diameter blasthole stopes underground (Mining Resource Engineering Limited).	115

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
16. Development of a mining method for recovering pillars adjacent to delayed fill stopes.	29
17. Improving productivities in cut-and-fill stopes through mechanized bolting and scaling.	32
18. Pillar recovery in blasthole stopes against consolidated hydraulic fills.	32
19. Mechanized excavation in consolidated rockfill.	35
20. Two studies for using water under pressure for mining applications; one for cutting and slotting and one for secondary breakage.	35
21. Controlled blasting underground mining.	96
22. Testing of "double-decked" crater blasting.	34
23. ANFO loading.	97
24. Perte de minerai et dilution par des stériles.	82
25. Modélisation CAO des méthodes d'abattage pour simuler dilution et pertes de minerai.	82
26. Development of a computer program for simulation of ore drawing in underground mining stopes.	89
27. Blast fragmentation studies.	86
28. Ultrasonic surveying for improved drilling and blasting practices.	86
29. Integration of blasting to stability, loading and transport.	86
30. Evaluation of blasting and stability in cut and fill mining.	86
31. Integrated drill and shovel monitoring in surface coal mining.	85

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
32. Étude de productivité des opérations d'une mine à ciel ouvert en fonction de la fragmentation du roc et du coût des explosifs.	44
33. Optimisation des sautages primaires à l'aide d'un micro-ordinateur.	45
34. Expérimentation avec des arches d'acier pour maintenir des galeries dans la méthode coupe-et-remblai.	50
35. Conception de patrons de sautage.	118
36. Développement de la foreuse Roger : essais à la mine Bousquet.	118
37. Alternative au sautage secondaire.	119
38. Optimization of underground stope blast design.	106
39. Replacing slurry explosives with an AN/FO and emulsion mixture for use in wet holes.	65
40. Test a hydraulic longhole production drill.	37
41. Test a high pressure (350 psi) ITH booster compressor for production stoping.	37
42. Evaluation of propagation sensivity of commercial explosives in 15 cm diameter holes.	99
43. Computer blast design program evaluation for large diameter blasthole stopes.	99
44. Theoretical model for predicting low velocity impact sensitivity bubble of sensitized slurry explosion.	99
45. DS-25 mobile scaler : a diesel powered unit mounted on an underground service vehicle chassis.	102
46. Teledyne loadrite : a transducer measures the variances in hydraulic pressure from an empty bucket to a loaded bucket and a computer calculates the weight.	102

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
47. Narrow vein mining : conceptual design of new stoping method and mechanization of stoping operations.	92
48. Guidelines to controlled blasting underground using small diameter blast holes.	73
49. Étude comparative de productivité et de performance d'une foreuse électrique-hydraulique à une flèche et d'une foreuse pneumatique à trois flèches.	57
50. Destressing pillars for crown mining.	27
51. Comparative button bit studies to determine the most appropriate 1 $\frac{3}{4}$ " rock bit for spodumene ore.	26
52. Stress analysis resulting from pillar reduction in room & pillar mining utilized to establish new pillar pattern.	26
53. Excavation en continu de massifs rocheux de dureté variable tout en maximisant le principe de la foration plutôt que l'utilisation d'explosifs.	105
54. Longhole mining in narrow veins.	36
55. Pillar mining at Polaris using frozen backfill.	9

8. MATERIALS HANDLING / MANUTENTION DES MATÉRIAUX

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
1. Large strain consolidation of oil sand tailings sludge.	68
2. Geotechnical properties of dredged clearwater clay-shale.	68
3. Analysis of in-pit crushing and conveying in open pit mines as alternative to conventional truck/ shovel system.	67
4. Computer assisted truck dispatch.	13
5. Waste handling by conveyors: an alternative study for traditional truck haulage.	7
6. Pneumatic stowing for transporting salt backfill.	63
7. Improvement of the suspended-load component of the layered mechanistic slurry pipeline model using data for Western Canada coals and materials suitable for mine backfilling	77
8. Continuous materials handling systems - Design and feasibility in medium sized hardrock mines.	76
9. Refinement of placement techniques for paste fills.	30
10. Testing methods for mining, drying and conveying high grade fines recovered from sumps.	29
11. Deep level conveyor hoisting from several loading points with grizzlies and rock breakers.	41
12. Scoop modification for 6-way bulldozer blade.	41
13. Containerized materials handling.	41
14. Hydraulic hoisting of -3" ore up 2260 ft. at Onaping Mine (HDRK Project).	33

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
15. Establishing a central control room at Strathcona for hoists and other materials handling functions.	33
16. Guidelines for underground rail haulage.	96
17. Backfill quality control in underground mining.	96
18. Continuous mobile ore removal system.	34
19. High density fill.	34
20. Mine shaft loading pockets.	117
21. Logiciel d'affectation en temps réel des camions dans une mine à ciel ouvert.	84
22. Development of a computer program for simulation of ore drawing in underground mining stopes.	89
23. A semi-automated truck dispatching system.	86
24. Simulation of underground haulage.	86
25. Revégétation des haldes à résidus miniers et application des boues provenant des eaux usées d'une usine d'épuration.	45
26. Elaboration d'un modèle de gestion des stocks de concentré et boulettes au port.	61
27. Accroissement de la productivité par l'amélioration du fonctionnement des équipements de hissage dans les mines souterraines.	118
28. Test a continuous loading system.	37
29. Upgrade mine hoisting system to 6000 TPCD ore.	37
30. Install and commission a slimes handling system for underground.	37

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
31. Installing an automated cemented crushed rock backfill system for one man control and operation.	37
32. Install and commission a gyratory crusher.	37
33. Evaluation of an underground mine monitoring system.	109
34. Spontaneous combustion.	109
35. Development and validation of the truck and shovel computer model.	109
36. Guidelines for underground rail haulage.	73
37. Evaluation d'une mini chargeuse-navette électrique (80 cm de large).	51
38. Use of a conveyor system to transport raw coal from the pit areas to the breaker station.	16

9. SERVICES

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
1. Determination of gas concentrations on-site using sensitive continuous monitoring techniques.	93
2. Measurement of airborne dust concentrations and particle size fractions using area and personal sampling devices.	93
3. Measurement of the permeability of protective clothing to gases, vapours and liquids.	93
4. Identification and size-fraction counting of biological contaminants such as mould and bacteria, in the workplace atmosphere.	93
5. Presentation of education workshops on chemical handling, industrial hygiene and toxicology.	93
6. Assistance on selection of respiratory protective devices and on set-up and administration of a respiratory protection program.	93
7. Examination of sulphide dust explosions in Canadian mines.	66
8. Research on ceramic filters and their use underground to clean diesel exhaust.	66
9. Completion of hoist design computer program for drum, friction and Blair hoists.	66
10. Recirculation of mine ventilation in order to decrease heating costs.	66
11. Computerized mine maintenance.	13
12. Control of diesel emissions.	10
13. Coal dust suppression at the thermal dryer using chemical sprays.	7
14. Sound and vibration suppression on compressed air equipment (jacklegs and stopers).	21

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
15. Mine air/waste heat recovery.	110
16. Testing a non-rotating balance rope with plastic filled valleys.	63
17. Testing plastic coated rub ropes in the service shaft.	63
18. Automating surface and underground routine mine survey by interfacing to computer aided design and drafting systems on microcomputers.	76
19. Combined study of radiation, dust and ventilation.	112
20. Evaluate the quality and quantity of respirable dust produced in various mining activities.	112
21. Determine the magnitude and sources of noise and vibrations and monitoring techniques and identification of major sources of radiation and factors affecting the radiation release.	112
22. Identification and quantification of major sources of noise and vibration in mines.	112
23. Maintaining a databank on current and developing mining technology.	114
24. Development of survey data entry, calculation and plotting.	29
25. Raise elevators.	41
26. Evaluation of computerized survey calculations.	41
27. Establishing a central control room at Strathcona for hoists and other materials handling functions.	33
28. Computerized surveying systems.	32
29. Blast vibration monitoring in blasthole stopes when mining against back-fill.	32

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
30. Vacuum-Blower unit.	31
31. Underground mine lighting.	96
32. A new concept for air-powered underground mine lighting.	97
33. Mine ventilation monitoring system.	97
34. Men and material hoisting.	117
35. Mine shaft rope test instruments.	117
36. Modélisation informatisée de réseaux de ventilation pour les mines souterraines.	82
37. Traitement informatisé de relevés barométriques de pressions dans un réseau de ventilation.	82
38. Comparaison entre deux méthodes d'analyse informatisée des réseaux de ventilation, notamment la méthode conventionnelle et la méthode thermodynamique.	90
39. Ultrasonic surveying for improved drilling and blasting practices.	86
40. Remote surveillance of plant entrances.	43
41. Traitement des eaux souterraines pour réduire les besoins de bassins de décantation et évacuer les boues.	44
42. Influence des paramètres climatiques sur les problèmes de "pompage" du ventilateur principal.	50
43. Conversion électrique (25 à 60 Hz).	50
44. Échangeur de chaleur entre l'entrée et la sortie de l'air de la mine.	47
45. Simulation du réseau de ventilation sur micro-ordinateur.	47

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
46. Accroissement de la productivité par l'amélioration du fonctionnement des équipements de hissage dans les mines souterraines.	118
47. Étude de la fatigue des câbles de machines d'extraction.	120
48. Développement d'un programme d'arpentage.	118
49. Mise en service, vérification et études techniques des machines d'extraction.	119
50. Introduction à la mécanique des treuils.	119
51. Mise en opération de divers logiciels en ventilation minière.	118
52. Projet de télémétrie dans les mines.	120
53. Développement d'un système de contrôle à distance sans vision directe de l'opérateur.	119
54. Mine electrification.	106
55. Final stage of the development and testing of an ultra sonic survey probe for determining the contours of inaccessible open stopes or other mine openings.	106
56. Recirculation of exhaust air in potash mines.	23
57. Alternative mine air heating.	24
58. Total station survey instruments interfaced with a computer system.	15
59. Install a second drive motor to the winze hoist.	40
60. Equip the No. 2 shaft hoist with a pinion brake.	40
61. Constructing an underground air receiver from a 460 foot exploration drift on the 3100 level.	40

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
62. Winder-Tensioner device for installing and tensioning hoist ropes.	101
63. Install and commission a slimes handling system for underground.	37
64. Upgrade mine ventilation to 1,000,000 cfm.	37
65. Communication system for isolated areas in mines.	25
66. Teledyne cogemacoustic ventilation fans.	102
67. Conceptual design of a new method of achieving rigidity of ventilation duct after installation.	92
68. Blasthole cleaning and dewatering apparatus.	91
69. Échantillonnage des boues de forage permettant une meilleure définition des teneurs dans les chantiers.	52
70. Programme d'entretien préventif de l'équipement diesel souterrain.	52
71. Entretien en continu des chemins et contrôle des venues d'eau au toit et dans le plancher.	52
72. Amélioration du système de lumière de circulation dans les rampes.	52
73. Sulphide dust explosion in Canadian mines - A fine particle approach.	72
74. Scale model testing in mine ventilation design.	73
75. Spreadsheet application in air conditioning design.	73
76. Underground mine lighting standards.	73
77. White finger disease prevention - Preliminary study.	72
78. Approfondissement du puit de Cedar Bay (1455') et installation d'une nouvelle salle d'extraction.	51

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
79. Utilisation de laser pour arpentage en continu de longues galeries.	58
80. Ventilation performance.	121
81. Methane prediction and control.	121
82. Dust control.	121
83. Microcomputer based survey calculation system.	27
84. Design of a new ventilation system.	27
85. Use of data collector for underground survey and integration to an IBM-AT surveying program.	27
86. Computerized production of geological plans for use by shiftbosses.	27
87. Informatisation des tâches telles le dessin, l'arpentage et le dynamitage ainsi que la ventilation et les rapports de production.	56
88. Récupération de la chaleur à partir d'un radiateur de compresseur.	48
89. Régulateur d'énergie programmable.	48
90. Sprinkler system in #3 shaft in order to prevent the shaft timber from drying out.	36
91. Waste heat recovery.	36
92. Ventilation modifications : installation of three centrifugal fans.	36
93. Auxiliary ventilation with centrifugal fans.	36
94. Mine monitoring and control system for pumps, fans and heating system.	36
95. The recovery and secondary use of waste heat from a 10 MW diesel generating plant.	14

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
96. Methods of reducing power consumption in underground mines including the use of centralised control of motors.	14
97. Evaluation of non-destructive hoist rope testing equipment.	122
98. Dust collector using geotextile material and ultrasonic water sprays.	39

10. GROUND CONTROL / SOUTÈNMENT

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
1. Design criteria for pillars in coal mines.	68
2. Most likely tension crack position in plane shear slope failure.	68
3. Outbursts at no 26 collieries, Glace Bay (Nova Scotia).	68
4. The effect of sorption on the strength of coal.	68
5. Size effects on the triaxial strength of coal.	68
6. Application of rock mechanics methods for the design of underground mines.	67
7. Shear failures during rockbursting.	67
8. Development of buckling failure analysis.	66
9. Pillar strengthening with grouted untensioned rebar or bolts.	66
10. Pit slope stability mining through underground slopes.	66
11. Linkage algorithm for finite element/boundary integral methods for specific rock mechanics and underground mining applications.	66
12. Sub-level retreat mining with waste fill.	15
13. The influence of rock mechanics considerations on mine design and short and long term stability.	15
14. Explosives customizing to give greater gap sensitivity and less power for perimeter blasting.	10
15. Shotcrete cable bolts and applications	10
16. Tailings backfill dewatering.	8

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
17. Drawpoint pneumatic barricade bags.	21
18. Low cost stressmeter.	110
19. Delayed backfill consolidation.	20
20. Use of backfill in potash mining (laboratory and in-situ testing).	63
21. Rock mechanics instrumentation for an underground potash mine utilizing backfilling operations.	63
22. Use of backfill in potash mining (modelling).	63
23. Pit slope stability studies.	75
24. Control blasting.	75
25. Microseismic emissions related to rock failure.	75
26. Long term subsidence prediction in potash extraction operations based on field monitoring/ laboratory measurement/ computer modelling studies.	75
27. Development of microseismic monitoring networks for rockburst precursor detection and rapid in-situ stress assessment.	75
28. Improvement of the suspended-load component of the layered mechanistic slurry pipeline model using data for Western Canada coals and materials suitable for mine backfilling	77
29. Research on and installation of automatic survey slope monitoring systems using radio telemetry.	76
30. Photogrammetric analysis of pit slope and mine design and slope stability investigations using CAD systems on microcomputers.	76
31. Seismic characterization of discontinuities and anomalous rock quality within mine surface crown pillars using attenuation and velocity imaging techniques.	77

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
32. Rock burst investigations using tomographic imaging and acoustic emission techniques.	77
33. Studies in mine sequencing in deep narrow vein deposits to minimize stress induced ground control problems.	76
34. Development and verification of computerized cut-and-fill panels design.	30
35. Refinement of placement techniques for paste fills.	30
36. Additive binders for cohesion and water reduction in dense fills.	30
37. Evaluation of pillar stability on a local and regional scale in Canadian hardrock mines and determination of pre-mining stresses in rockburst-prone mines.	112
38. Developing a handbook for the safe and economic design of surface crown pillars.	114
39. Investigating mine stability and rock burst activity in mines and study the effect on computer models of alternate mine layout and extraction rates.	112
40. Supporting research to increase potash recoveries.	114
41. Developing rock bolting guidelines based on the latest technological data and analytical results.	113
42. To establish the strength, deformational and other properties of the rock types encountered in research investigations and to evaluate rock mass stability for surface crown pillars.	114
43. Develop new seismic equipment and monitoring techniques for studying rockbursts in hardrock mines and carry out seismic studies.	112
44. Carry out analytical numerical modelling studies as part of applied ground control investigations.	113

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
45. Sampling, field testing and modelling of a surface crown pillar, Les Mines Selbaie, Québec (C. Mirza Engineering).	115
46. Research on microseismic technology (McGill University).	115
47. Regional subsidence related to potash mining (Central Canada Potash).	115
48. Development of a state-of-the-art microseismic monitoring system (UP-N-204) (Noranda Research Centre).	115
49. To carry out field and laboratory testing, field measurements and numerical modelling of excavations in potash (Cominco Limited).	114
50. Use of consolidated fills for controlling violent pillar failures.	29
51. Low profile roofbolting and screening platform.	41
52. Improvement of fill placement techniques to reduce cement content, segregation and dilution during pillar recovery.	32
53. Rockburst studies at Strathcona Mine jointly with CANMET and the Ontario government with emphasis on fault slip behaviour.	32
54. Design of cablebolts in cut-and-fill and blasthole stopes (Project jointly with AMIRA in Australia).	33
55. Blast vibration monitoring in blasthole stopes when mining against back-fill.	32
56. Use of microseismic monitoring at all the mines and linkage to a central control room for continuous monitoring on a 24-hour basis.	32
57. Development of 2-D and 3-D numerical modelling programs using the Distinct Element approach.	32
58. Use of paste fills and other high modulus fills, state-of-the-art studies in progress.	32

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
59. Ground control research and testing.	31
60. Mechanization of passive ground support system.	35
61. Pozzolanic property of Cu/Ni ground slag.	35
62. Controlled blasting underground mining.	96
63. Backfill quality control in underground mining.	96
64. Loose detection devices.	96
65. Resin/cement grouted bolts in underground mining.	96
66. High density fill.	34
67. Investigation of iron ore blast furnace slag as a binding agent for fills.	34
68. Development of a 3-D numerical modelling system for rock mechanics.	34
69. Microseismic monitoring.	34
70. Cable bolt grouting.	97
71. Rock stress monitoring.	97
72. Wire rope technology.	117
73. Rockbolt testing and audits.	117
74. Evaluation of installed wire mesh screening.	117
75. Joint CANMET/MOL/Industry rockburst research program.	117
76. Evaluation of ultrasonic rockbolt tester.	117
77. Hydrogéologie des exploitations minières au voisinage de zones de cisaillement.	87

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
78. Les études géotechniques de diverses natures sur les sols, les roches et les bétons.	87
79. Les expertises en géophysique appliquée et études sismiques.	87
80. Simulation de zones de cisaillement par méthode statistique, éléments finis et modèle physique.	87
81. Évaluation du potentiel de coups de toit d'une mine.	83
82. Prévision des effets de l'utilisation des rejets de sel comme matériau de remblayage sur l'affaissement de surface des mines de sel domal.	83
83. Programme d'éléments finis pour la conception des mines.	83
84. Évaluation du potentiel du vérin Goodman les massifs élastoviscoplastiques.	83
85. Analyse de stabilité de piliers de surface.	83
86. Effet de l'historique de chargement avec la méthode convergence-confinement.	83
87. Détermination des propriétés du sel gemme par essais dilatométriques.	83
88. Essais de poinçonnement des parois latérales des trous de sonde.	83
89. Adaptation de la technique du "Doorstopper" modifiée aux massifs de roches hétérogènes élastoviscoplastiques.	83
90. Caractérisation des propriétés in-situ des remblais de mines.	83
91. Preparation of a "Technical guide for grouted cable-bolts used as ground support".	89
92. Improvement of subroutine DISCO (solving of principal stresses along discontinuity planes) to account for progressive failure, blasting effects and randomly distributed spacings and sizes of discontinuities.	89

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
93. Mechanics of toppling failure in rock slopes.	89
94. Instrumentation of cable-bolts in underground and open pit mines.	89
95. Development and testing of a tension measuring gauge for cable-bolts used as ground support.	89
96. De-stress blasting design.	85
97. Mine backfill design and performance.	85
98. Tunnel probe drilling for poor quality ground.	85
99. Stability of gate roadways in underground coal mines.	86
100. Development of new pack material for coal mines.	86
101. Rock-support interaction studies.	86
102. Paste backfill characteristics.	86
103. Acoustic emission technology applied to mining.	86
104. Integration of blasting to stability, loading and transport.	86
105. Evaluation of blasting and stability in cut and fill mining.	86
106. Evaluation et utilisation du système de laçage par câble (cable lacing) comme alternative au support par cadres d'acier.	53
107. Swellex bolts.	53
108. Étude de faisabilité d'un rideau d'étanchéité pour réduire les venues d'eau.	43
109. Mesure des mouvements verticaux d'un banc par nivellement hydraustatique.	43

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
110. Installation and evaluation of 20 foot stressed cable bolts in pre-sheared pit walls.	43
111. Rock bolting open pit walls.	43
112. Automatisation de la lecture des inclinomètres.	43
113. Études de soutènement pour accentuer les pentes finales des mines à ciel ouvert.	44
114. Trous de drainage périphérique pour abaisser la nappe phréatique et installation d'un système de contrôle du mouvement des murs en continu.	61
115. Rock mechanics computer simulation model.	49
116. In situ stress measurement in 1305-W drift.	50
117. Expérimentation avec des arches d'acier pour maintenir des galeries dans la méthode coupe-et-remblai.	50
118. Paramètres structuraux d'un pilier de surface par géophysique.	50
119. Addition de cendres (fly ash) au remblai pour réduire la proportion de ciment.	47
120. Addition of flocculant in mine backfill.	47
121. Conception des piliers de surface à la mine Chimo.	118
122. Les propriétés physiques et mécanique des remblais souterrains et leur influence sur la conception des chantiers souterrains. (M.J. Scoble- McGill).	118
123. Étude de la stabilité à la mine Niobec.	118
124. Guide d'ingénierie pour la conception des piliers de surface.	118

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
125. État sommaire de la question sur la mesure des déplacements par extensomètres.	119
126. Stabilité des massifs rocheux à la mine Tio.	118
127. Guide technique du soutènement par câbles d'ancrage cimentés.	120
128. Guide du boulonnage condensé.	119
129. Étude de stabilité des chantiers de la zone S-3 des Mines Camchib Inc.	119
130. Procédures de mesure des contraintes dans les massifs rocheux.	119
131. Analyse de stabilité des talus.	119
132. Programme Inclino.	119
133. Logiciels de modélisation numérique pour le calcul des contraintes autour des excavations.	118
134. Conduct subsidence studies in potash mining areas.	106
135. Ground support optimization.	106
136. Development of a rock mechanics ground control field data base for use in mine design and modelling techniques.	106
137. Backfill studies of potash mines.	106
138. Development of novel ground monitoring instrumentation : recoverable stressmeter, holographic stressmeter and closure meter.	106
139. Construction of state-of-the-art microseismic system.	106
140. Development of commercially viable instrumentation/computer systems for full wave microseismic source location and blast vibration monitoring.	106

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
141. Develop numerical modelling for mine design : primarily finite element methods and boundary element techniques will be used.	106
142. Design of crown pillars.	104
143. Procédures de boulonnage.	104
144. Basic research into the control of brines around underground bulkheads in Saskatchewan potash mines.	23
145. A field test program to evaluate the use of waste salt backfill in Saskatchewan potash mines.	23
146. Tri-axial creep test of Saskatchewan potash mine sylvinite.	23
147. A computer system to predict subsidence related to potash mining for use on IBM AT's.	23
148. Assessment of longevity of grouts used underground in Saskatchewan potash mines.	23
149. Electromagnetic sounding system for strata control in potash mines.	70
150. Natural and induced seismicity in Saskatchewan.	70
151. Three dimensional seismic reflection surveys from surface for potash mine planning.	70
152. Development and implementation of an advanced microseismic monitoring system.	70
153. Monitoring of microseismic activity.	24
154. Potash rock mechanics instrumentation.	111
155. Large sample triaxial test facility.	111

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
156. Seismic monitoring.	22
157. Study of overburden movement and pillar behavior in extracted areas.	22
158. Input parameters for numerical modelling of potash strata	22
159. Computerized radio telemetry slope monitoring system for strain gauges and extensometer monitoring.	6
160. Behaviour of halite tailings as backfill.	79
161. Geomechanics behaviour of Ontario oil shale.	79
162. Constitutive behaviour of salt rocks.	79
163. Viscoplastic numerical model development.	79
164. Salt rock geomechanics for mine design.	80
165. Flow in rock and concrete fractures.	79
166. Thermoelastic expansion of rocks.	79
167. Extension of point-load test methods.	79
168. Digital photoanalysis of rock jointing.	79
169. The effectiveness of mine backfill in alleviating rockburst phenomena	78
170. Installing an automated cemented crushed rock backfill system for one man control and operation.	37
171. Testing a 3% cement and 2% flyash mix to bind a minus 5 inch crushed rock backfill.	37
172. Geotechnical Engineering.	109

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
173. A suggested method for estimating bolt lengths and loadings for support of rectangular openings.	109
174. Field and laboratory testing, field measurements and numerical modelling of excavations in potash.	19
175. Sampling, field testing and modelling Les Mines Selbaie surface crown pillar.	100
176. Investigation into cementitious properties of lead blast furnace slag.	91
177. Full scale destructive testing of grout filled hollow structural steel mine support arch structures.	91
178. Investigate the use of Nova Scotia produced anhydrite as a monolithic mine support pack material in coal mines.	91
179. Conceptual design of rock stabilizer and outline of testing procedure.	91
180. Rock bolt for low seams.	92
181. Resin/cement grouted bolts in underground mining.	72
182. Guidelines to controlled blasting underground using small diameter blast holes.	73
183. Stability analyses of rock salt mines (u/g and solution mining).	72
184. Ground destressing by comouflet blasting.	72
185. Conduct research related to rock engineering and ground control.	73
186. Investigation of light and charged particles emitted by rocks during fracture.	73
187. Roadway/gateroad support.	121

	<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
188.	Subsidence.	121
189.	Destressing pillars for crown mining.	27
190.	Rockbursts in sill and crown pillars; underground stress measurements to determine influence of backfill.	27
191.	Mine wide seismic monitoring system for determining mechanisms of rockbursts.	27
192.	Microseismic monitoring.	27
193.	Stress analysis resulting from pillar reduction in room & pillar mining utilized to establish new pillar pattern.	26
194.	Implantation d'un programme de mécanique des roches pour déterminer la méthode de minage d'un gisement à grande profondeur.	56
195.	Cemented rockfill.	36
196.	Testing feasibility of replacing post in timbered drifts with cable slings.	36
197.	Installation of microseismics system to monitor rock bursts.	36
198.	Pillar mining at Polaris using frozen backfill.	9
199.	An evaluation of "tightfill" placement techniques.	9
200.	Cable bolting techniques in permafrost.	9
201.	Highwall stability plains open pit coal mines.	108
202.	Technical and economic feasibility of using rock anchors to support a steeply dipping footwall.	107
203.	Deformation and progressive failure of open pit highwalls.	107

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
204. Ground movements in coal mine.	107
205. Developing a cost-effective laboratory method of obtaining triaxial test data about the strength properties of rock and coal.	107
206. Installation d'un système microséismique à la mine Norita pour permettre l'exploitation maximale du gisement de façon sécuritaire.	59
207. Étude du potentiel de coups de toit dans les mines de l'Abitibi.	88
208. Ground stability of a moderately dipping coal seam footwall.	16
209. An examination of rockburst related characteristics in the Sudbury basin.	74
210. Stability and rock bolting of layered strata.	69

11. HIGH TECH / TECHNOLOGIE DE POINTE

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
1. In-situ stress determination in oil sands by hydraulic fracturing.	68
2. Short range planning model.	11
3. EPRI/ARC coal oil agglomeration research program.	11
4. Coal utilization for enhanced oil recovery.	11
5. Telerobot interfaces for machines operation (UBC).	67
6. Coal blending computer model for improved mine planning.	66
7. Development of a file of mine planning computer models compatible with the IBM-PC.	66
8. Computer program for estimating capital & operating costs.	67
9. Shovel payload weighing system.	13
10. Computer assisted truck dispatch.	13
11. Computerized mine maintenance.	13
12. Cermet bit inserts for gauge buttons.	10
13. Underground computer assisted design.	110
14. Mining recording computerization.	110
15. Mine design CADD system.	20
16. Developing computer software for complete mine design and planning.	63
17. Use of backfill in potash mining (modelling).	63
18. Open pit mine design and production scheduling using microcomputers and CAD systems.	75

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
19. Underground stope layout and mine design using microcomputers and CAD systems.	75
20. Computer applications in underground mine design.	76
21. Rock burst investigations using tomographic imaging and acoustic emission techniques.	77
22. Seismic characterization of discontinuities and anomalous rock quality within mine surface crown pillars using attenuation and velocity imaging techniques.	77
23. Expert system for risk analysis in mine feasibility.	76
24. Testing a side-viewing television camera for use in small diameter drill holes.	114
25. Carry out analytical numerical modelling studies as part of applied ground control investigations.	113
26. Develop new seismic equipment and monitoring techniques for studying rockbursts in hardrock mines and carry out seismic studies.	112
27. GEOROC : Technology transfer seminars for the potash industry (Re/Spec Limited).	115
28. Determination of the viability of cavitating hydro impact (UP-T-223) (Teledyne Canada).	115
29. Development, construction and testing of prototype accessories for automation of down-the-hole drill (Vadeko International).	115
30. Design and development of blasthole depth measurement test set (Davis Engineering Limited).	115
31. Computer blast design program evaluation for large diameter blasthole stopes underground (Mining Resource Engineering Limited).	115

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
32. Experimental verification of high velocity impact model for slurry explosives projectile impact (Mining Resource Engineering Limited).	114
33. Evaluation of propagation sensitivity of commercial explosives in 15 cm diameter hole (Mining Resource Engineering Limited).	114
34. Theoretical model for predicting low velocity impact sensitivity bubble sensitized slurry explosion (Mining Resource Engineering Limited).	114
35. To carry out field and laboratory testing, field measurements and numerical modelling of excavations in potash (Cominco Limited).	114
36. Development of a state-of-the-art microseismic monitoring system (UP-N-204) (Noranda Research Centre).	115
37. The development of a new semiconductor Alpha Portable Detection System (UP-T-234) (Thompson & Neilson).	115
38. Determination of the PAH partition ratio and nature of mutagens generated by catalytic purifiers (Laurentian University).	115
39. Development of survey data entry, calculation and plotting.	29
40. Underground radio communications.	41
41. Direct data entry by front line supervisor.	41
42. Evaluation of computerized survey calculations.	41
43. Selection and development of a geological database system for ore reserve calculations.	32
44. Computer aided design for optimum mine planning.	32
45. Computerized surveying systems.	32
46. Use of microseismic monitoring at all the mines and linkage to a central control room for continuous monitoring on a 24-hour basis.	32

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
47. Use of paste fills and other high modulus fills, state-of-the-art studies in progress.	32
48. Development of 2-D and 3-D numerical modelling programs using the Distinct Element approach.	32
49. Loose rock sensing system for mechanized scaling.	35
50. Remote control for rockbreaking machines.	35
51. Two studies for using water under pressure for mining applications; one for cutting and slotting and one for secondary breakage.	35
52. Jointly developing, with Spar Aerospace, remote controlled underground equipment to screen and bolt in recently blasted areas.	34
53. Development of a 3-D numerical modelling system for rock mechanics.	34
54. Microseismic monitoring.	34
55. Rock stress monitoring.	97
56. Remote scoop retrieval system.	38
57. Low frequency cavitation processing.	71
58. Resonance grinding.	71
59. Sub-surface radar data analysis.	71
60. Modélisation de réacteurs en plasma pour l'extraction de minéraux.	87
61. Modélisation informatisée de réseaux de ventilation pour les mines souterraines.	82
62. Traitement informatisé de relevés barométriques de pressions dans un réseau de ventilation.	82

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
63. Interactions hydrauliques-mécaniques dans les essais de perméabilité en place : essais ponctuels et essais de pompage.	82
64. Influence du scellement sur le niveau d'eau fourni par un piézomètre.	82
65. Modélisation CAO des méthodes d'abattage pour simuler dilution et pertes de minerai.	82
66. Télésurveillance des chargeurs-transporteurs.	83
67. Mise au point d'un système de télécommande en vue de l'opération de l'équipement minier souterrain sans visibilité du site de travail.	83
68. Automatisation de l'opération d'un brise-roches par rétroaction visuelle.	83
69. Logiciel d'affectation en temps réel des camions dans une mine à ciel ouvert.	84
70. Development and testing of a tension measuring gauge for cable-bolts used as ground support.	89
71. Création d'une station CAO/DAO et intégration dans l'enseignement des techniques.	89
72. Développement de systèmes experts pour la sélection de l'équipement dans les mines à ciel ouvert.	90
73. Simulation des systèmes pelles-camions.	90
74. Expert system development for mine design/control.	85
75. Monitoring machine breakage of rock.	85
76. Acoustic emission technology applied to mining.	86
77. Computerized open pit design.	86

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
78. Optimization of underground mine design.	86
79. Simulation of underground haulage.	86
80. A semi-automated truck dispatching system.	86
81. Optimization of mine development and operating variables.	85
82. Development of micro computer software to evaluate new mine investment proposals.	85
83. Integrated drill and shovel monitoring in surface coal mining.	85
84. Informatisation de la conception et planification.	43
85. Automatisation de la lecture des inclinomètres.	43
86. Remote surveillance of the central air and steam plant operation.	43
87. Remote control of primary crusher operation.	43
88. Méthode statistique de contrôle de procédés.	43
89. Étude de contrôle des ensacheuses par ordinateur.	44
90. Robotisation de l'empilage des sacs d'amiante.	44
91. Sous-programme d'ordinateur (intégré au programme actuel) pour suggérer au répartiteur la destination optimale d'un camion libre dans une mine à ciel ouvert.	45
92. Design de puits optimal et planification minière par micro-ordinateur.	45
93. Robotisation des chargeuses-navettes (scooptrams).	44
94. Études des différentes alternatives de drainage du mur est de la mine Black Lake.	44

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
95. Elaboration d'un modèle de gestion des stocks de concentré et boulettes au port.	61
96. Rock mechanics computer simulation model.	49
97. Expansion de notre système d'ordinateur (concentrateur et mine).	50
98. Simulation du réseau de ventilation sur micro-ordinateur.	47
99. Addition of flocculant in mine backfill.	47
100. Gestion informatisée des titres miniers.	119
101. Développement d'un logiciel de planification minière assistée par ordinateur.	119
102. La modélisation numérique de la géologie et la minéralisation du projet Djebba en Tunisie.	119
103. La modélisation numérique de la géologie et la minéralisation de la zone S-3 des Mines Camchib Inc.	119
104. Modélisation numérique et validation d'un gisement géologique (QIT).	119
105. Développement d'un système de planification par graphisme interactif à 3-D.	118
106. Étude de cas en conception et planification de fosse à ciel ouvert avec le logiciel PC-Mine.	120
107. Projet de télémétrie dans les mines.	120
108. Mise en opération de divers logiciels en ventilation minière.	118
109. Développement d'un système de contrôle à distance sans vision directe de l'opérateur.	119

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
110. Programme Inclino.	119
111. Logiciels de modélisation numérique pour le calcul des contraintes autour des excavations.	118
112. Development of a continuous mining machine for hard rock formations.	106
113. To review hard materials and novel processes suitable for application in hard rock cutting and mining.	106
114. Remote control system and guidance system which would permit the operation of mining equipment without direct sight.	106
115. Final stage of the development and testing of an ultra sonic survey probe for determining the contours of inaccessible open stopes or other mine openings.	106
116. Development of novel ground monitoring instrumentation : recoverable stressmeter, holographic stressmeter and closure meter.	106
117. Develop numerical modelling for mine design : primarily finite element methods and boundary element techniques will be used.	106
118. Development of commercially viable instrumentation/computer systems for full wave microseismic source location and blast vibration monitoring.	106
119. Construction of state-of-the-art microseismic system.	106
120. A computer system to predict subsidence related to potash mining for use on IBM AT's.	23
121. Mine automation.	24
122. Commissioning of an automated ore grade monitoring system.	24
123. Alternative mine air heating.	24

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
124. Total station survey instruments interfaced with a computer system.	15
125. Update interactive short to long range planning system for use on IBM-PC/AT workstation.	6
126. Computerized surveying system for EDM using Autocad to update mine plan and store survey pick-ups.	6
127. Development of an Expert System for geophysical log interpretation.	79
128. Viscoplastic numerical model development.	79
129. Digital photoanalysis of rock jointing.	79
130. Remote sensing for mine engineering geology.	80
131. Theoretical model for predicting low velocity impact sensitivity bubble of sensitized slurry explosion.	99
132. Computer blast design program evaluation for large diameter blasthole stopes.	99
133. Experimental verification of high velocity impact model for slurry explosives projectile impact.	99
134. Preparation of computer program specifications for the mining industry.	99
135. Development, construction and testing of prototype accessories for automation of DTH drills.	103
136. Determination of the technical viability of cavitating impact.	102
137. Teledyne loadrite : a transducer measures the variances in hydraulic pressure from an empty bucket to a loaded bucket and a computer calculates the weight.	102

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
138. Optimisation des circuits de production de la fibre d'amiante.	81
139. Chemo-abrasive water jet cutting of rocks.	72
140. Design and testing of respirator efficiency.	73
141. Fractal applications to fragmentation processes in the mineral industry.	73
142. Fractal characterization of composite materials.	73
143. Investigation of light and charged particles emitted by rocks during fracture.	73
144. Etude de faisabilité de télécommande sur Cavo 310 et 320.	58
145. Utilisation de laser pour arpentage en continu de longues galeries.	58
146. Water jet assisted cutting.	121
147. Computerized production of geological plans for use by shiftbosses.	27
148. Use of data collector for underground survey and integration to an IBM-AT surveying program.	27
149. Microseismic monitoring.	27
150. Rockbursts in sill and crown pillars; underground stress measurements to determine influence of backfill.	27
151. Mine wide seismic monitoring system for determining mechanisms of rockbursts.	27
152. Computerized communication system on trucks in an open pit.	94
153. Informatisation des tâches telles le dessin, l'arpentage et le dynamitage ainsi que la ventilation et les rapports de production.	56

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
154. Régulateur d'énergie programmable.	48
155. Excavation en continu de massifs rocheux de dureté variable tout en maximisant le principe de la foration plutôt que l'utilisation d'explosifs.	105
156. Installation of microseismics system to monitor rock bursts.	36
157. Mine monitoring and control system for pumps, fans and heating system.	36
158. Computerized tracking of mine ores and grades.	42
159. Modélisation numérique des dépôts pour permettre l'optimisation des réserves et un meilleur contrôle sur la teneur.	60
160. Utilisation du logiciel de planification minière PC-Mine.	60
161. Robotics for mine control.	107
162. Lasers in coal mining.	107
163. Non-cable vehicle guidance.	107
164. Installation d'un système microséismique à la mine Norita pour permettre l'exploitation maximale du gisement de façon sécuritaire.	59
165. Hardrock fragmentation using sonic and ultrasonic resonances.	74

12. PROCESSING / MINÉRALURGIE

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
1. Development of bioleaching technology for metal recovery from underground mine waste and backfill.	93
2. EPRI/ARC coal oil agglomeration research program.	11
3. Coal utilization for enhanced oil recovery.	11
4. Heap leaching / solvent extraction	13
5. Rock grinding index.	13
6. Secondary recovery of base metals by in place bacterial leaching.	110
7. Bacterial-Leach assisted mining.	20
8. Continuing program of large-scale underground testing of bacterially assisted leaching methods.	29
9. Processes for obtaining environmentally safe uranium mill tailings.	71
10. Modélisation de réacteurs en plasma pour l'extraction de minéraux.	87
11. Quantification of mineral liberation using automated image analysis.	86
12. Remote control of primary crusher operation.	43
13. Méthode statistique de contrôle de procédés.	43
14. Program to eliminate product contamination by improved housekeeping practices.	43
15. Programmable controller for packaging operation.	43
16. Étude statistique du contrôle de qualité.	43
17. Étude de contrôle des ensacheuses par ordinateur.	44

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
18. Robotisation de l'empilage des sacs d'amiante.	44
19. Développement de grades d'amiante chrysotile de remplacement.	45
20. Fine iron recovery.	61
21. Develop a better technique to treat gold ore in a particular climate based on vat leaching technology.	64
22. Install and commission a gyratory crusher.	37
23. In-situ oilsands recovery.	109
24. Secondary recovery of base metals by in-place leaching.	25
25. A study of pyrite liberation of Prince Coal by grinding in closed circuit with a classifier.	91
26. Treatment of Pine Brook barite to obtain mud grade barite concentrate.	91
27. Optimisation des circuits de production de la fibre d'amiante.	81
28. Travail sur échantillonneur, à la décharge du convoyeur no 4, pour comparaison avec la teneur calculée au raffinage.	55
29. Contrôle en continu des valeurs aurifères.	54
30. Thiourée : techniques d'utilisation et contrôle.	54
31. Tailings reclamation using dredging and dry excavation.	36
32. Improving metal recoveries of partly oxidized sulphide ore using organic reagents.	14
33. Hydraulic reclaim using E.C.C. water monitors and slurry pumps to recover gold from refractory tailings deposited on surface over 39 years of operation.	12

<u>PROJECT TITLE</u> <u>TITRE DU PROJET</u>	<u>PAGE</u>
34. Large scale heap leaching of low grade ore.	39
35. Rotary breaker reject crushing and feeding to the preparation plant for coal processing.	16
