

**Figure 8.** Field photos of Mesoproterozoic Bylot Supergroup strata in northern Baffin Island: **a)** aerial view of White Bay fault (WBF) exposed along Tay Sound, showing open-folded dolostone of the Angmaat Formation in the hanging wall (field of view is ~4 km, looking toward the northwest). Photograph by B.M. Saumur. 2017-121; **b)** medium-bedded, light grey quartz sandstone (hammer for scale). Photograph by D.R. Skipton. 2017-122 and, in inset photo, basal quartz-pebble conglomerate, Adams Sound Formation. Photograph by M.R. St-Onge. 2017-123; **c)** ripple marks on siltstone bedding surface, Lower member of the Arctic Bay Formation. Photograph by M.R. St-Onge. 2017-124; **d)** stromatolitic dolostone, Angmaat Formation (pencil tip for scale). Photograph by D.R. Skipton. 2017-125; **e)** subhorizontal, medium-bedded dolostone overlying a sequence of interbedded red shale and gypsum, Angmaat Formation (field of view is ~1 km). Photograph by D.R. Skipton. 2017-126
