## PRODUCTION OF COAL AND COKE

IN

Chief of the Division of Mineral Resources and Statistics.

OTTAWA
GOVERNMENT PRINTING BUREAU 1913

# ADVANCE CHAPTER OF THE ANNUAL REPORT ON THE MINERAL PRODUCTION OF CANADA, DURING THE CALENDAR YEAR 1912. 

(Tons used throughout this report are short tons of 2,000 pounds, except otherwise stated.)

## COAL.

The production of coal in Canada in 1912 exceeded that of any previous year, the total production being reported as $14,512,829$ short tons valued at $\$ 36,019,044$ and constituting nearly 27 per cent of the total value of the mineral production of Canada during the year. The production was obtained by about 244 operating companies employing an average of 27,581 men at a wage cost of $\$ 20,784,843$. Compared with 1911, in which year the production was $11,323,388$ short tons valued at $\$ 26,467,646$, an increase is shown of $3,189,441$ tons, or 28 per cent in quantity and $\$ 9,551,398$ or 36 per cent in total value.

The largest previous year's output was in 1910 when the production was $12,909,152$ short tons valued at $\$ 30,909,779$, compared with which 1912 shows an ' increase of $1,603,677$ tons or 12 per cent and $\$ 5,109,265$ or' over 11.6 per cent in total value.

In contrast to ;1911 there were no very serious interruptions to mining operations during 1912 with the exception of the labour troubles in the mines of the Canadian Collieries, Limited, on Vancouver island, during the latter part of the year, and on account of which the production in British Columbia was somewhat less than might otherwise have been expected.

The character of the coal mined in Canada is chiefly bituminous, althougin anthracite is obtained from one mine in Alberta and a considerable tonnage of lignite is mined in Alberta and Saskatchewan.

The term production in the tables and the text is used to represent the amount of coal actually sold or used by the producer as distinguished from the term output which is applied to the total coal extracted from the mine and which in some cases includes coal lost or unsaleable or coal carried into stock on hand at the end of the year.

Statistics of the production by provinces in 19.12 are shown in Table 1 and of the production during 1909-10-11 in Table 2.

In Nova Scotia there was an increased production in 1912 of 779,468 tons or 11 per cent, over 1911. This Province produced nearly 54 per cent of the total in 1912 as against 62 per cent in 1911. The production in New Brunswick is quite small in proportion to the other provinces and amounted to only 44,780 tons in 1912, a decrease of nearly 20 per cent from 1911. In the west for the first time on record Alberta has the largest production, amounting to $3,240,577$ tons, the production in British Columbia being 3,208,997 tons; but, as already stated, the latter Province would have had a higher production had
labour troubles not prevented a normal output at the mines of the Canadian Collieries, Limited. The production in Alberta is the highest recorded for that Province, while in British Columbia the greatest production was attained in 1910. Large decreases were shown in these Provinces in 1911 and correspondingly large increases in 1912 due to the abnormal conditions of miners out on strike and consequent cessation of worle during a large part of 1911.

The Province of Nova Scotia in 1912 produced nearly 54 per cent of the total Canadian production, British Columbia 22.1 per cent, Alberta 22.3 per cent, and Saskatchewan 1.5 per cent. The relative importance of the different provinces as coal producers for number of years past is indicated in the next table, in which is shown the proportional contributions of each province to the total tonnage of coal produced in Canada. The coal-fields on the Atlantic seaboard still continue to produce more than half the total, although in 1910 the combined output of the western provinces was only a little less than 50 per cent of the total.

[^0]stock carried forward from 1911. Returns as to the amount of coal lost due to breakage, washing, etc., are very incomplete, but 167,291 tons were thus reported bringing the total 'output' of conl up to $14,647,447$ tons.

Notwithstanding Canada's large coal resources the total domestic production (including that exported) was equivalent in 1912 to only about 54 per cent of the total consumption, there having been imported for home consumption during 1912, 14,595,810 tons. . The total consumption of coal as shown in subsequent tables was $26,934,800$ tons, or an average of about 3.644 tons por capita, while the production averaged about 1.957 tons per capita of population.

The principal coal-fields are located on the extreme east and in the far west, while the central Provinces of Ontario and Quebec, which contain the great bulls of the population, are without coal deposits. 'Nova Scotia coal is largely consumed within the Province and also finds a considerable market in Quebec. A little less than 9 per cent of the coal production of this Province was reported as sold for export in 1912. The market in Ontario is almost altogether supplied, and that of Quebec province to a lesser degree, by coal imported from the nearer fields of the adjacent states of the United States. There are no authracite coals in eastern Canada, and our requirements of this fuel have to be met entirely by imports from Pemnsylvania. Manitoba is also supplied largely by importations from the United States.

The Saskatchewan production finds a local market within the Province and also in Manitoba.

Of the Alberta production about 91.8 per cent in 1912 was used by collieries or sold for consumption in Oanada chiefly within the Province; 2.8 per cent was sold tfor export and 5.3 per cent used for making coke which was marketed in British Columbia and in the United States. British Columbia is the largest producer of coal for export. In 1912 about 52.4 per cent of the production in this Province was used by the collieries or sold for home consumpton; 33.7 per cent was sold for export, and 13.8 per cent used in making. coke.

[^2]
## EXPORTS AND IMPORTS.

The statistics of exports and imports of coal as given in tables following have been compiled from the reports of the Department of Customs. The total exports during 1912 were $2,127,133$ tons valued at $\$ 5 ; 821,593$ or $\$ 2.74$ per ton, as compared with exports in 1911 of $1,500,639$ tons valued at $\$ 4,357,074$ or $\$ 2.90$ per ton, and exports in 1910 of $2,377,049$ tons valued at $\$ 6,077,350$ or $\$ 2.56$ per ton. The exports during 1911 were unusually low, on account of the strike conditions in Alberta and British Columbia during that year.

The total imports during 1912 were $14,505,810$ tons valued at $\$ 39,478,037$, as compared with imports in 1911 of $14,558,892$ tons valued at $\$ 39,292,591$ and imports in 1910 of $10,597,082$ tons valued at $\$ 28,450,001$.

Statistics of exports during $1910-11-12$, showing the principal countries of destination, are given in Table 4, and the annual exports since 1873 in Table 5.

The United States is the principal market for Canadian coal exported, that country laving taken about 75.4 per cent of the total exports in 1912. There were exported to Newfoundland 167,510 tons or 7.9 per cent of the total. Exports to other countries of 207,167 tons included 48,599 tons to Mexico and 37,985 tons to Australia. Smaller tonnages were also exported to Bermuda, St. Pierre, Cuba, Japan, and many other points.

Coal imported is subdivided into three classes: anthradite, including anthracite dust; bituminous round and run of mine; and bituminous slack such as will pass through a $3^{\prime \prime}$ screen. The imports of anthracite in 1912 were 4, 184,017 tons walued at $\$ 20,080,388$, an average of $\$ 4.80$ per ton, showing an increase of 163,440 tons over the 1911 imports. The imports of bituminous round and run of mine in 1912 were $8,491,840$ tons valued at $\$ 16,846,727$, an average of $\$ 1.98$ per ton, showing a decrease of 413,975 tons from the imports in 1911. The imports of bituminous slack in 1912 were 1,919,953 tons valued at $\$ 2,550,922$ or an average of $\$ 1.33$ per ton, showing an increase of 287,453 tons or 17 per cent over the 1911 imports.

(a). Duty, 53c. per ton. (b). Gonl, anthracite, and anthracite eoal dust; duty free. (c). Duty 14c. per ton.

In the anthracite column the inports show a very considerable increase in 1.888 over 1887, ant incrense of over $9 \pm$ per cent, the falling off again in 1889 being quite as remarkable. The average values per ton for the three years 1887 , 1858, and 1889, were $\$ 4.02, \$ 2.47$, and $\$ 4.03$ respectively. Although a duty of 00 c. per ton on anthracite conl was removed. May 13,1887 , it is hardly thought this would account for the ehanges indicated, and unless some error may possibly have crept inte the Trade and Navigation report, no explanation is available.

The total consumption of coal in Canada during 1912 deduced from the records of production, exports, and imports was $26,934,800$ tons, as compared with $24,247,698$ tons in 1911, an increase of $2,687,102$ tons or 11 per cent. Of the total consumption during the past year $12,385,696$ tons or 46 per cent was domestic coal and 14,549,104 imported coal.

The per capita consumption in 1912, based on an estimate of the population made by the Census Office, was approximately 3.596 tons, as compared with a per capita consumption of 3.384 tons in 1911.

Consumption of Coal in Canada, 1911-1912.

## Nova Scotia.

The production of coal in Nova Scotia in 1912 was reported as $7,783,888$ tous, as compared with a production of $7,004,420$ tons in 1911, showing an increase of 779,468 tons or 13 per cent. This is entirely bituminous coal and represents the output of 13 operating companies, one of which, the Dominion Coal Company, contributed about 64 per cent of the total.

Of the production in 1912, the quantity sold.for consumption in Oanada was $6,123,348$ tons, while 482,597 tons were reported as sold for export to the United States land 193,274 tons sold for export to other countries; 731,315 tons were used for colliery consumption and by workmen and 253,354 tons were used by.colliery operators in making coke and in steel naking, etc. A considerable tomnage of coal sold for consumption in Canada was also used in making coke, the total tonnage used for coke making in the Province being 913,157 tons of domestic conl.

About 37 per cent only of the total sales were for consumption within the Province itself. Ahmost an equal amount, about 35 per cent, was sold for consumption in the Province of Quebec. The adjacent Provinces of New Brunswick and Prince Edward Islaud and the colony of Newfoundland took in 1912 about 15 per cent of the output.

There are five principal coal-fields in the Province, that affording the largest production being the Sydney coal-field in Cape Breton county. The production in Cape Breton county in 1912 was $5,908,922$ tons or 76.6 per cent of the total; Pictou produced 785,547 tons or 11 per cent of the total, Cumberland county, 715,988 tons or 9 per cent of the total, and Inverness and other counties, 313,431. tons or 4 per: cent of the total.

Annual statistics of the production of coal in Nova Scotia since 1872 are shown in Table 8, the figures being given in both long and short tons; the production by comoties during the past six years is shown in Table 9 . The record, in each caise covers the calendar year.

The statistics published by the Provincial Department of Mines cover the fiscal year ending September 30, and the details of colliery output during the year endling' September 30, 1912, as published in the Provincial Mines Report, are shown below; while the colliery output during the last three fiscal years is shown in Table 10 and the distribution of conl sold during the same periods in Table 11.

## New Brunswick.

The total shipments of coal from mines in this Province, as estimated by the Provincial Department of Works, was 42,780 tons, and adding 2,000 tons for colliery consumption and workmen, etc., the production is placed at 44,780 tons, which is 11,001 tons less than the iproduction in 1911.

Mining operations are carried on in the Grand Lake coal-field, in Queens county, in which a comparatively large number of small mines or operings are intermittently operated. About 50. per cent of the total output was directly reported by the following operators: The Rothwell Coal Co., Limited, The Minto Coal Co., Limited, The Northfield Coal Co., Limited, all of Minto, and the Thompson Coal and Brick Co. of Beersville.

## Saskatchewan.

The total production in 1912, as reported from 25 separate collieries, was 225,342 tons of lignite coal valued at $\$ 368,135$, an increase of 18,563 tons or 9 por cent over the 1911 production. Of the 1912 production 215,796 tons were sold for consumption in Canada and 9,546 tons used by the producers for colliery consumption, for workmen, and in bricknaking.

The output which has hitherto been obtained entirely from the Estevan and Souris fields in the southeastern portion of the Province is used mainly for domestic pnrposes within the Province and in Manitoba. During the past two years mining wperations have been commenced in a district about 115 miles east of the Estevan field and 40 miles south of Moosejaw.

The principal operating mines of the Estevan field are the Western Dominion Collieries, Limited, and the Mranitoba and Saskatchewan Coal Com-
pany. Amongst the other mines, the chief operators are the Hawkinson Mining Co., the Estevan Coal and Brick Co., the Maple Leaf Mines, Limited, the Excelsior Coal Mining Co., and the Great West Coal Company.

$\dagger$ Including a small quantity from the Turtle Mountain district, Manitoba.

## Alberta.

The coal production of Alberta has increased rapidly during the past few years and has in 1912 exceeded that of British Columbia, which until the past year has been the chief coal mining province of western Canada. Alberta has numerous small collieries, the total number operating in 1912 being about 182, and in addition 74 mines reported either no operations, or development only, nevertheless 91 per cent of the total production was, in the past year, derived from 34 collieries operated by 30 companies, each colliery having an output exceeding 10,000 tons. Nine of these collieries has each an output exceeding 100,000 tons.

The total production of marketable coal during the year was $3,240,577$, tons valued at $\$ 8,113,525$ or an average of $\$ 2.50$ per ton. The coal production of this Province includes lignite, bituminous coal, and the only anthracite mined in Canada, the production of which in 1912 was 160,589 tons.

Of the total production in 1912, 2,772,374 tons were sold for home consumption in Canada and 93,126 tons for export; the producers used 204,259 tons for colliery consumption and for workmen, and 170,818 tonls were used in making coke.

The production by collieries in 1912 and in 1911 is shown in tables following. The low production in 1911, it will be remembered, was due to the protracted
strike and closing down of all the large collieries in the southern part of the Province during that year.

The production in 1912 by 30 companies, each with an output exceeding 10,000 tons, was $2,961,056$ tons. The aggregate production of all other collieries was 279,521 tons.

According' to statistics published by the Coal Mines Branch of the Department of Public Works, Province of Alberta, the total output of coal in that Province in 1912, including a considerable tonnage of unmarketable slack, screening; etc., was $3,446,349$ tons. The total sales are reported by the same authority as $2,879,489$ tons; used in making colke, 170,818 tons; used undei colliery boilers, 262,071 tons; added to stock, 22,002 tons; slack, including anthracite and liguite coals, 111,069 tons.

The total sales, as shown by returns furnished this Division, including sales to workmen, were $2,888,872$ tons, which is slightly in excess of the record given above: There is a deficiency, however, of 82,084 tons in the quantity reported as colliery consumption and it is evident that a considerable tomnage of slack used under colliery boilers has not been included in some of the records sent to the Department of Mines.

The following tables show the total output of coal in Alberta during 1912, the output by districts and the labour employed according to thie records compiled and published ${ }^{1}$ by Mr. Joln T. Stirling, Provincial Inspector of Mines.

Output of Bituminous Coal.

## British Columbia.

The total production of coal in Britisll Columbia in 1912 from 17 collieries operated by 12 companies avas $3,208,997$ tons valued at $\$ 10,028,116$, as compared with a production of $2,542,532$ tons in 1911 and $3,330,745$ tons in 1910. The actual colliery output was somewhat higher as a considerable tonnage is lost in washing at some of the Vancouver Tsland collieries. The production in 1911 was greatly restricted on account of the closing down of the Crowsnest collieries because of labour difficulties and the very large increase in 1912 merely shows a return to normal conditions of operation. The 1912 production, although slightly less than that of 1910, is, with the exception of that year, the largest that has been recorded for the Province, and would probably have been greater even than the 1910 production had it not been for the falling off in production at the mines of the Canadian Collieries Limited, because of strikes during the latter part of the year.

Of the total production in 1912, 1,410,014 tons or nearly 44 per cent were sold for consumption in Canada, 961,862 tonls or 30 per cent were sold for export to the United States, and 121,136 tons or 3.8 per cent were sold for export to other countries. The quantity used by producers in making coke was 444,665 tons or nearly 14 per cent of the production and 271,320 tonls or 8.4 per cent were used under colliery boilers and for wrorkmen.

The total production of coal on Vancouver island in 1912 was $1,571,683$ tons, a falling off of 217,847 tons, as compared with 1911 when the production was $1,789,530$ tons. The mines of the Canadian Collieries (Dunsmuir) Limited, were operated with a reduced staff of workmen from September 16, 1912, to the end of the year, owing to differences that had arisen between the company and its employees. The production of the Crowsnest mines in 1912 wais $1,413,714$ tons compared with 499,580 tons in 1911, the mines of the Crowsnest Pass Coal Company and the Hosmer mines being in operation for three months only during the latter year. The production in the Nicola and Princeton valleys in 1912 was 223,660 tons, as compared with 253,421 tons in 1911, a decrease of 29,761 tons.

Production by Districts, 1911 and 1912.

[^7]The following genemal summary of development in various coal mining. fields of British Columbia is quoted from the Aunual Report ${ }^{1}$ of Mr. W. F. Robertson, Plovincial Mineralogist of the Province.
'In addition to the coal mines actually producing, there are a number of important fields which have not as yet reached the producing stage-some of these partly developed and equipped, and others only prospected.

That these fields contain a large reserve of coal there is absolutely no doubt, and many of them rovill be developed and producing as soon as the market demands it and the thansportation facilitios can be provided.

Near Princeton, in addition to the colliery of the Princeton Coal and Land Company, which shipped some 21,386 tons of very good liguitic coal, a new colliery has begun shipping-United Empire-making a start this year by shipping 500 tous.

In the same section the Columbia Coal and Coke Company has continued development all year with a force of seventy men, but has not as yet begun shipping.'
'In the Nicola valley the Pacific Coast Coal and Coke Company has continued development with a small force, and although not shipping, reports indicate that the development has been successful in proving seams of good coal.
'In the coalfield of the Peace River valley, although the seams are thin, the coal is of exceptionally good quallity.
'The Groundhog coal field was visited by the writer during the summer, an account of which will be found on page 81 et seq. of this Report. The extent of the coalfield proved to be 'all that was claimed, but the quality of the seams as exposed in the openings seen in the southern end of the field was very disappointing. The field has only been tested in one part, and it seems quite probable that further prospecting will develop cleaner seams of coal; the number and thickness of the seams is all that could be desired.
'The coalfields on the Buikley, Telkwa and Zymoetz rivers, near the line' of Grand Trunk Pacific Railway, east of Hazelton, have all been udergoing devalopment, but it is as yet prem'ature to say how important thoy may prove to be.
' On the southern end of Graham island, on Skndegate inlet, a colliery (the British Pacific) has been partly equipped, but so far the output has been unimportant.
'In the interior of Graham island, to the enst of the coal-outcrops at Camps Robertson and Wilson, systematic boring has been in progress all year, but without demonstrating workable coal. It would appear that the coal-measures had been laid down on a very uneven floor of igneous rock, many of the bosses of which were higher than the depth of the coal-deposit, so that they are now

[^8]found protruding through; it was on one of these bosses that the first boreholes happened to be put down. The work is to tbe continued this year in other spots.
'Drilling has been going on in the northern part of the island near Masset, but no word has been received of commercial coal-seams having been proved.
'But slight development has been done on the coal-area near Bear lake, in the Cariboo district.
'On Vancouver Island the coalfield on Quatsino sound has been undergoing development in a small way, with as yet no definite results.
'The large producing companies have all been quietly doing extensive development work-the Canadian Collieries, near Campbell river and south of Cumberland, and it is nuderstood much of this has been satisfactory, but details 'are not available for publication.
'The Western Fuel Company has been engaged in opening a new shaftwhich will develop a new and very extensive seam of coal. Two shafts, each $10 \times 26$ inside of timbers and 350 feet apart, are being sunk; no expense or trouble which would tend to increase the safety or economy of future work is being spared in opening up this new colliery-a policy for which the present management has already acquired an enviable reputation.
'The Pacific Coast Coal Mines, Limited, has continued the development of its Suquash Colliery, and has this year mined about 4,500 tons of coal.'

## Yukon.

The principal coal mining companies operating in the Yukon district are the Tive Finger Coal Company at Tantalus in the southern Yukon and the Northern Light, Power, and Coal Co., Limited, operating the Sourdough mine, Colliery No. 2, on Coal Creek, 40 miles northwest of Dawson. The total production in 1912 was 9,245 tons. valued at $\$ 44,958$.

[^9]
## COKE.

The statistics of coke production given herewith do not include coke made as a by-product in the manufacture of illuminating gas but are restricted to a record of the output of 'oven coke' produced chiefly for metallurgical purposes.

During 1912 the total quantity of coke made in Canadian coke oven plants from both domestic and imported coals was $1,406,028$ tons. The quantity of coal used for this production was $2,053,807$ tons, of which $1,428,509$ tons were domestic coal and 525,298 tons were imported.

In 1911 the production was 954,388 tons of coke made from 1,409,844 tons of coal, of which $1,025,501$ tons were domestic and 384,343 tons imported. Tu 1910 the prodrction of coke was 901,269 tons derived from 1,373,793 tons of coal, of which $1,331,585$ tons were domestic and 42,208 tons imported.

The quantity of coke sold or used by the producers in 1912 was $1,411,229$ tons, as compared.with 985,651 tons in 1911 and 902,715 tons in 1910.

The smaller quantity of Canadian coal used in 1911 was due to the coal miners' strike in southern Alberta and British Columbia during the greater part of that year, and the increased quantity of imported coal used to the construction of coke ovens in Ontario.

The consumption of coke in Canada is much in excess of the domestic production, there being a considerable importation of coke, chiefly into Ontario and Quebec, for use in the metallurgical industries.

The imports of coke during the calendar year 1912 were 628,174 tons and the exports 57,744 tons. Adding the production 1,411,229 tons to the net imports a consumption is shown of $1,981,659$ tons. Similarly estimated the consumption in 1911 was $1,677,188$ tons, and in 1910, $1,581,832$ tons.

The production by provinces in 1911 and 1912 and the distribution of coke sold or used in 1912 are shotwn fin the next two tables.

Coke Production, 1912.

In Nova Scotia coke was made at Sydney, Sydney Mines, and Westville during 1912, but the ovens at Stellarton and Loindonderry were idle. The output is used almost entirely in the manufacture of iron 'and steel. The Ontario
production was all from the ovens of the Lake Superior Corporation at Sault Ste. Marie, the blast furnaces and colking ovens of the Atikokan Iron Company at Port Arthur being idle throughout the year. In Alberta coke ovens were operated at Coleman, Lille, and Passburg, and in British Columbia at Fernie, Michel, and Hosmer, all in the Orowsnest district. The coke output of these Provinces is used chiefly by the copper and lead smelters, finding a market in the United States as well as in British Columbia.

The total number of ovens in active operation on December 31, 1912, was 1,905, while 948 were reported idle on the same date. In Nova Scotia the Dominion Iron and ISteel Company at Sydney has 620 finished ovens all of the Otto Hoffman, by-product type. The by-products from these ovens include tar and ammonia. The tar is sold to the Dominion Tar and Chemical Company, whose works are contiguous to the coke oven plant, and this product is further treated for the manufacture of refined tar, pitch of various grades, benzole, creosote, carbolic acid, etc. The Nova Scotia Steel and Ooal Company has 30 ovens of the Bauer type and 120 Bernard ovens; the latter are situated near the blast furnace and the surplus gas is msed for the production of steam for the electric power plant. The surplus gas from the Bauer ovens is used in generating steam for general colliery use. The other ovens in this Province number 178 and are all of the Beehive type.

The Atikokan Iron Co., Limited., has 100 Beehive ovens at Port Arthur, Ont., and the Algoma Steel Company 110 Koppers by-product regenerative ovens at Sault iste. Marie.

In Alberta the West Canadian Collieries, Limited, at Lille, has 50 ovens of the Bernard or Belgian type. The ovens of the International Coal and Coke Company at Coleman, 216 in number, are of the ordinary Beehive type, while the Leitch Collieries, Limited, have erected at Passburg 191 Mitchell rectangular ovens.

There are 1,420 beehive ovens in the Crowsnest district of British Columbia and 150 on $\nabla$ ancouver island.

The production of by-products from coke ovens in 1912 at Sydney and Sault Ste. Marie included $8,428,896$ gallons of tar, and ammonia liquor contalining 11,289 tons of sulphate of ammonia. In 1911 the production was 0,646,155 gallons of tar, and ammonia liquor containing 7,124 tons of sulphate of ammonia. Production in 1910 was: tar $3,963,591$ gallons, sulphate of. ammonia 3,491 tons, and in 1909, tar 4,016,824 gallons, and sulphate of ammonia 3,351 tons.

Statistics of exports and imports of coke as published by the Customs Department are shown in Tables 3 and 4 following.

The exports of coke during the calendar year 1912 were 57,744 tons, as against exports of only 9,852 tons in 1911 and 57,971 tons in 1910. These exports are all from British Cclumbia and Alberta. The imports during the calendar year 1912 were 628,174 tons, valued at $\$ 1,702,856$, as against imports
of 751,389 tons, valued at $\$ 1,843,248$, in 1911, and 737,088 tons; walued at $\$ 1,908,725$; in 1910.

The imports shown in Table 4 cover the fiscal year.

* For nine months only. $\dagger$ Duty free.

[^0]:    * Alberta and Saskatchewan were established as provinces on September 1, 1905. For the purpose of comparison, the coal production during the years previous' to that date has been separattd according to the present boundaries of these Provinces.

    Statistics of the distribution of the coal production of Canada in 1912 given in following tables show 10,572,365 tons reported as sold for consumption in Canada, 1,537,585 tons sold for export to the United States, and 314,410 tons, sold for export to other countries, or total sales of $12,424,360$ tons; 870,885 tons were used by colliery operators in the manufacture of colke, in steel plants and in brick plants, while $1,217,584$ tons were used in the operation of collieries and by workmen. Of the coal thas disposed of 32,673 tons were derived from 48696-2

[^1]:    * Production is obtained by adding coal sold and coal used.

[^2]:    * The total production for the years 1785 to 1873 is made up as follows:Nova Scotia (1785 to 1873) British Columbia (1836 to 1873) $8,053,670$ tons of 2,000 pounds.
    537,480 " 2,000 "

[^3]:    1 Inciudes also coal used by producers for steel making and other purposes, and for making briquettes.
    2 Production is obtained by adding sales and coal used.
    3 Complete records of losses are not furnished by all producers.

[^4]:    * Includes consumption under boilers, otc., and coal used by workmen:
    (a) " 17,923 tons for coke manufacturing.
    $\begin{array}{ccccc}(\mathrm{b}) & " & 27,177 & " & " \\ \text { c) } & " & 120,718 & " 1 \\ \text { (d) } & " & 90,000 & \text { tons of briquettes. } \\ \text { (e) } & " & 1,300 & " 1\end{array}$

[^5]:    ${ }^{1}$ Ammal Report, Department of Public Works of the Province of Alberta, 1012, pp. 61, 62.

[^6]:    1. Western Fuel Co.
    2. Vancouver-Nanaimo Coal Mining Co
    3. The Canadian Collieries (Dunsmuir), Itt.
    4. Pacific Coast Collieries, Ltd.
    5. Crowsnest Pass Coal Co., Ltd
    6. The Hosmer Mines, Ltd.
[^7]:    "This production is obtained by adding 'Home Consumption ' and 'Sold for Export.'
    $\dagger 52,935$ tons of this amount were exported as sales without the division into 'Home Consump. tion' and 'Sold for Export.'
    $\ddagger$ Two months only.

[^8]:    ${ }^{1}$ Annual Report of the Minister of Mines of British Columbia for the year ending December 31, 1912; p. 249.

[^9]:    * Part of this production was mined in 1900 .

[^10]:    (a) Including 22,627 tons imported conl.
    (b) All imported coal.
