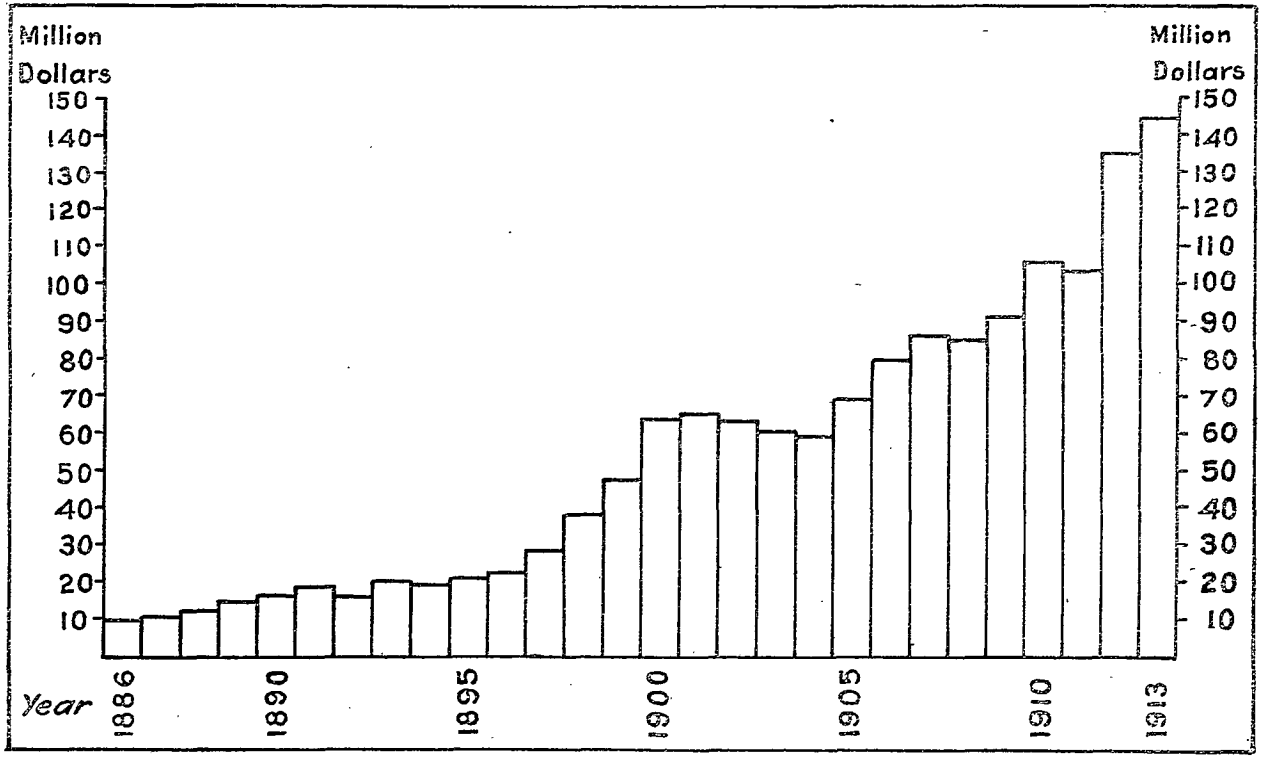
Annual Mineral Production of Canada 1886-1913



THE

MINERAL PRODUCTION OF CANADA

During the Calendar Year

1913

General Summary.

Broad statements of the mineral production of the country in terms of a total valuation are of chief importance from the point of view of comparison.

The term 'mineral production' is so comprehensive that there is a wide divergence in methods, not only in the compilation of quantities of mineral products, but also in the adoption of basis of valuation. During the past four years the reports published by this Division have presented results obtained from two methods of compiling statistics of metal production, or the production of metalliferous ores. In the first method which has been the basis of the statistics here shown since 1886, the metallic production is stated in terms of the refined or recoverable metals produced and valued at the values of the refined metals. In the other method a total is compiled on the basis of the values of the ores produced or shipped from the mines in so far as these values are reported or are obtainable, a method which naturally gives a total aggregate value somewhat lower than that of the refined product. In both methods the non-metallic products are similarly compiled, viz.: on the general basis of the products and their values as used or marketed with certain important exceptions; coal for instance being included as coal, notwithstanding that a portion of the output may be made into and sold as coke by some of the colliery operators.

No matter what method may be used to arrive at a total, the result is certain to be subject to objection because of some difficulty or inconsistency so that as already stated the total value is useful chiefly as a means of comparing the results of one year with those of another and then only in a very general way.

The records of greatest importance in mineral statistics are those showing the quantities of products produced and shipped from mines and works, the home consumption, and the foreign trade, and in this report it has been endeavoured to make it as complete as possible.

Annual Mineral Production in Canada since 1886.

Year.	Value of production.	Value per capita.	Year.	Value of production.	Value per capita.

1897	28,485,023	5 49	1911	103,220,994	14 42
1898	38,412,431	7 32	1912	135,048,296	18 27
1899	49,234,005	9 27	1913	145,634,812	18 77

The total value of the mineral production in Canada in 1913, compiled on the basis of applying to the metals their values when refined, was $145,634,812 or an average value per capita of $18.77. The total value compiled on the basis of mine shipments will be referred to under that heading. Notwithstanding the financial depression which became more pronounced as the year progressed, this production shows a very substantial increase over that of the previous year. The total value of the production in 1912 was $135,048,296 or an average of $18.27 per capita, compared with which the production in 1913 shows an increase of $10,586,516 or 7·8 per cent. The 1913 production was not only the largest recorded in aggregate amount, but also the highest per capita, and the increase over the previous year is particularly gratifying in view of the very great advance made in 1912 over all previous years.

The records of the annual mineral production in Canada since 1886 shown in the above table indicate the rapid growth which the mineral industry has made in Canada.

The total value of the production in 1886 was $10,221,255, or about $2.23 per capita. In ten years the value had increased to $22,474,256, or $4.38 per capita, more than twice the total in 1886, and nearly twice the production per capita. The next ten years witnessed an increase to $79,286,697 in 1906, or $12.81 per capita, about 3½ times the production in 1896. Since 1906 the total production has shown an increase of over 80 per cent and an increase of nearly 50 per cent in production per capita.

The detailed comparative statement here presented shows the production of each important product during the past two years, the proportion which each contributes to the total production, and the increase or decrease as the case may be of the production, in 1913 as compared with that of 1912.

*Short tons throughout. (*a*) The metals copper, lead, nickel, and silver are for statistical and comparative purposes valued at the final average value of the refined metal. Pig-iron, zinc ore, and cobalt oxides are valued at the furnace or spot, and non-metallic products at the mine or point of shipment. (*b*) Copper content of smelter products and estimated recoveries from ores exported, at 16·341 cents per pound, in 1912; and 15·269 cents per pound in 1913. (*c*) The total production of pig-iron in Canada in 1912 was 1,014,587 tons valued at $14,550,999, of which it is estimated 978,232 tons valued at $14,100,113 should be credited to imported ores; in 1913 the total production was 1,128,967 tons valued at $16,540,012, of which 1,055,459 tons valued at $15,543,583 are credited to imported ores. (*d*) Refined lead and lead contained in base bullion exported at 4·467 cents per pound in 1912, and 4·659 cents in 1913, the average prices in Montreal. (*e*) Nickel content of matte produced valued at 30 cents in 1912 and 1913. (Increasing quantities of nickel-copper matte are now being used in making monel metal which is sold at a price much below that of refined nickel). The value of the nickel contained in matte, as returned by the operators, was about 10 cents per pound for both years. (*f*) Estimated recoverable silver at 60·835 cents per ounce in 1912, and at 59·791 cents in 1913. (*g*) Gross returns for sale of gas. (*h*) Quantity on which bounty was paid and valued at $1·418 per barrel in 1912, and at $1·782 in 1913. (*k*) In 1912 and 1913 figures as reported by the producers, which differ slightly from those of the Trade and Navigation reports. (*n*) Partial record only of production.

Of the production in 1913, metallic products were valued at $66,361,351, or 45·5 per cent of the total. Non-metallic products, excluding structural materials, were valued at $48,463,709, or 33·3 per cent of the total, and structural materials, $30,809,752, or 21·2 per cent. Compared with 1912 the metallic products showed an increase of nearly 8·5 per cent; non-metallic products an increase of 7·5 per cent, and structural materials an increase of 7 per cent. Amongst metallic products the chief increases were in gold, iron, lead, and nickel, and the principal decreases in copper and silver. Amongst the non-metallic products, the chief increases were in asbestos, coal, feldspar, gypsum, mica, natural gas, pyrites, salt, and talc, and the decreases, in corundum and quartz. In the case of petroleum there was a decrease in the number of barrels produced, but on account of the higher price obtained, an increase in total value.

The structural materials showed increases in the production of cement, stone, and sand and gravel, and decreases in the aggregate production of clay products, and in lime, sand-lime brick, and slate.

Coal still continues as the most important mineral product in Canada, both in point of tonnage and value. The continuance during 1913 of the labour strike at the mines of the Canadian Collieries (Dunsmuir) Ltd., and its extension to the other collieries on Vancouver island, seriously restricted the output, nevertheless this product contributed 2·56 per cent of the total, as against 26·6 per cent in 1912. The metals come next in importance with silver contributing 13·07 per cent of the grand total; gold 11·4 per cent; nickel 10·23 per cent, and copper 8·07 per cent. With the increase in output from the Porcupine district, gold has advanced from fifth to third place in order of value. From 1898 to 1903, or during the period of maximum gold production in the Yukon gold, was in point of value the most important mineral product. The total value of the metals in 1913 was somewhat smaller than it might otherwise have been because of the slightly lower average prices obtained.

With the exception of lead and nickel, all the metals showed a falling off in average price. Copper dropped from 16·341 cents per pound in 1912, to 15·269 cents, a decrease of 1·072 cents. Silver dropped from 60·835 cents per ounce, to 59·791 cents per ounce on the New York market, a loss of 1·044 cents. The average price of spelter in New York decreased from 6·943 cents per pound, to 5·648 cents in 1913, and tin from 46·096 cents per pound in 1912, to 44·252 cents in 1913. The average price of lead in Montreal increased from 4·467 cents per pound in 1912 to 4·659 cents in 1913. There was also an increase in the average price of lead in London. The New York price, however, fell off from 4·471 cents in 1912 to 4·370 cents in 1913.

*Quotations furnished by Messrs. Thomas Robertson & Company, Montreal, Que.

The production of pig-iron included in the general table includes only that proportion of the output of Canadian blast furnaces credited to Canadian ores. There is an important production of pig-iron from imported ores (shown in the footnotes of the general table, and in the chapter on iron and steel) and the total value thereof in 1913 was exceeded only by the production of coal, copper, and gold. There is also a large production of aluminium from imported ores, for which no value is included in the general table of production.

The production of cement in 1913 constituted 7·57 per cent of the total, clay products 6·4 per cent; stone 4·33 per cent; asbestos 2·6 per cent; and natural gas 2·27 per cent.

EXPORTS AND IMPORTS.

A very large portion of the mineral production of Canada is exported for consumption or refining outside of Canada. On the other hand considerable quantities of mine products, chiefly those which have been refined or subjected to partial treatment, or in the form of manufactured goods ready for consumption, are imported.

The total value of the exports of products of the mine, including direct mine products and manufactures thereof, in 1913 was $79,803,874, as compared with $68,590,225 in 1912. This value includes for 1913 mine products to the value of $59,073,167, and manufactures valued at $20,730,707, as against mine products valued at $54,349,640, and manufactures valued at $14,241,585 in 1912. Practically the whole of the Canadian production of copper, nickel, and silver is exported, also a very large proportion of the production of gold, asbsetos, and mica. There are as well considerable exports of coal. These products alone contribute about 95 per cent of the value of the mine products exported. Manufactured products exported consist chiefly of iron and steel goods, agricultural implements, aluminium, calcium carbide, acetate of lime, and coke.

The United States is the chief destination of Canada's mine exports, about 77 per cent having been exported to that country during the fiscal year 1912–1913, and about 21 per cent to Great Britain.

A great variety of mineral products, chiefly in a manufactured or semi-manufactured condition, are annually imported into Canada, and these imports have been increasing with much greater rapidity than has Canada's domestic mineral production. The total value of such imports during the calendar year 1913, was $252,806,046, as compared with imports valued at $238,212,835 in 1912; $181,773,708 in 1911, and $147,305,012 in 1910. Of the total imports in 1913, over $58,000,000 was made up of the cruder forms of mineral products such as coal, diamonds unset and bort, iron ore, asphaltum, ores of metals, alumina, sand and gravel, etc., as against $50,000,000 for similar products in 1912. The imports of iron and steel in 1913 included in this table, were valued at $134,778,658, as against $128,321,146 in 1912. Imports of the metals, aluminium, antimony, copper, gold, silver, lead, platinum, tin, and zinc, and manufactures thereof, and metallic alloys, reached a total value of nearly $26,000,000, as compared with a value of over $27,000,000 in 1912; petroleum and products of, $13,238,429, as against $11,858,533 in 1912; clays and clay products $6,760,752, as against $6,592,540 in 1912.

Over 50 per cent of the total imports were in iron and steel products, and the principal increases in imports in 1913 were in coal, iron and steel, and in petroleum and petroleum products.

METALLIC ORES AND PRODUCTS.

Antimony.—There has been no production of antimony during the past two years, and no export of antimony ore is recorded in 1912 or 1913. The imports of antimony or regulus thereof, in 1913, were 667,050 pounds, valued at $49,408, and of antimony salts 23,649 pounds, valued at $2,421, or a total value of imports of $51,829. In 1912, the imports were antimony and regulus 998,045 pounds, valued at $60,456, and antimony salts 55,683 pounds, valued at $7,197, or a total value of imports of $67,653.

Cobalt.—Cobalt oxide and cobalt material are being produced in Canadian smelters, the production in 1913 of cobalt oxide being 660,079 pounds valued at $525,028, nickel oxide 268,304 pounds, valued at $80,561, and of cobalt residues and mixed oxides to the value of $90,266 containing 403,882 pounds cobalt and 293,870 pounds nickel. During 1912, the production of cobalt oxide and nickel oxide was 349,054 pounds, valued at $156,256, and of cobalt material and mixed cobalt and nickel oxides 1,285,280 pounds, valued at $163,988.

There was an import of 422 hundredweight of cobalt ore valued at $11,487 during 1913.

Copper.—The production of copper contained in blister, matte, or ore, which was practically all exported, was 76,976,925 pounds in 1913, valued at $11,753,606, as compared with 77,832,127 pounds in 1912, valued at $12,718,548.

The exports in 1913 were reported as 82,650,360 pounds, valued at $9,602,911, as against exports of 78,488,564 pounds, valued at $9,036,479, in 1912. The total imports of copper in 1913 were valued at $7,414,610; and included crude and manufactured copper to the extent of 43,054,418 pounds, valued at $7,044,297, together with other manufactures of copper of which the quantity is not recorded, valued at $370,313. The copper imports in 1912 were valued at $7,047,356, including 42,832,747 pounds of crude and manufactured copper, valued at $6,741,895, and other copper manufactures of which the quantity is not recorded, valued at $305,461.

Gold.—The total value of the production of gold in 1913 was $16,598,923, representing 802,973 fine ounces, as compared with $12,648,794, representing 611,885 fine ounces of metal in 1912.

The Yukon placer production in 1913 was 282,320 fine ounces, valued at $5,836,072.

Of the total production in 1913 about $6,346,072 were derived from alluvial workings; $5,185,544 as bullion from milling ores, and $5,067,307 from ores and concentrates sent to smelters. In 1912, $6,106,677 were derived from alluvial workings; $2,270,331 as bullion from milling ores, and $4,271,786 from ores and concentrates sent to smelters.

The exports of gold-bearing dust, quartz, nuggets, and gold in ore, etc., in 1913, were valued at $12,770,838, as against $10,014,654 in 1912.

The imports of gold bullion during the calendar year 1913 were $840,435, of gold coin $12,495,028, and of manufactures of gold and silver $1,055,837.

Pig-Iron.—The total production of pig-iron in Canadian blast furnaces in 1913 was 1,128,967 tons, valued at $16,540,012, of which it is estimated 1,055,459 tons, valued at $15,543,583, should be credited to imported ores, and 73,506 tons, valued at $996,429, to domestic ores. In 1912 the total production was 1,014,587 tons, valued at $14,550,999, of which 978,232 tons, valued at $14,100,133, should be credited to imported ores, and 36,355 tons, valued at $450,886 to domestic ores.

The exports of pig-iron, including ferro-products, in 1913, were 6,326 tons, valued at $351,646, as against 6,976 tons, valued at $310,702, in 1912. The imports of pig-iron in 1913 were 235,843 tons, valued at $3,234,877, ferro-manganese, etc., 30,355 tons, valued at $940,443, and charcoal pig 926 tons, valued at $12,528, as compared with imports in 1912 of pig-iron 272,565 tons, valued at $3,511,599, ferro-manganese, etc., 19,810 tons, valued at $469,884, and charcoal pig 115 tons, valued at $1,370.

The total exports of iron and steel and manufactures thereof, in 1913, were valued at $13,999,149, as against $10,682,484 in 1912. The imports of iron and steel and manufactures thereof during the calendar year 1913 were valued at $141,272,357, as compared with $144,400,949 during the fiscal year ending March 31, 1913.

Iron Ore.—The total shipments of iron ore from Canadian mines in 1913 were 307,634 tons, valued at $629,843, as compared with 215,883 tons, valued at $523,315, in 1912. The quantity of imported iron ore used in Canada in 1913 was about 2,110,828 tons, as compared with 2,019,165 tons of imported ore used in 1912.

Lead.—The production of lead in 1913 was 37,662,703 pounds, valued at $1,754,705, as against 35,763,476 pounds, valued at $1,597,554, in 1912. The exports of lead in 1913 were: lead in ore, etc., 329,960 pounds, valued at $9,136; while in 1912 the exports were: lead in ore, etc., 299,240 pounds, valued at $8,193. The total value of the imports of lead and manufactures of, in 1913, was $1,215,433, as compared with imports in 1912, valued at $1,806,221.

Nickel.—The production of nickel contained in nickel-copper matte produced in Canada and exported for refinement was, in 1913, 49,676,772 pounds, valued at $14,903,032, as compared with a production of 44,841,542 pounds, in 1912, valued at $13,452,463. During 1913 there were smelted 823,403 tons of ore, producing 47,150 tons of matte, as against 725,065 tons

of ore, producing 41,925 tons of matte, in 1912. Small quantities of nickel-oxide are also produced in connexion with the treatment of the Cobalt District silver ores. The exports of nickel contained in ore, matte, etc., during 1913, were 49,459,017 pounds, valued at $5,195,560; being 5,164,512 pounds to Great Britain, 44,224,119 pounds to the United States, and 70,386 pounds to other countries. In 1912, the exports were 44,221,860 pounds, valued at $4,661,758: being 5,072,867 pounds to Great Britain and 39,148,993 pounds to the United States. The imports of nickel and nickel anodes in 1913 were valued at $8,512, as against a value of $23,125 imported in 1912. There was also an importation of nickel-silver in bars, ingots, valued at $162,520, and of manufactures of nickel, valued at $86,672, in 1913.

Silver.—The production of silver contained in bullion, or estimated as recovered from mattes and ores, etc., exported, was in 1913, 31,845,803 fine ounces, valued at $19,040,924, as compared with 31,995,560 fine ounces, valued at $19,440,165, in 1912. About 89·2 per cent of the production in 1913 was derived from "Cobalt District" of Ontario. The production of silver in 1905 was only 6,000,023 ounces, and in 1900, 4,468,225 ounces. The exports of silver contained in ores, mattes, etc., in 1913, were 37,371,569 ounces, valued at $21,441,220; as against exports of 34,911,922 ounces, valued at $19,494,416, in 1912. The imports of silver bullion during the calendar year 1913 were valued at $840,245, as compared with bullion imports of $1,100,344 in 1912.

Zinc.—The shipments of zinc ore in 1913 were 7,889 tons, valued at $186,827, as compared with shipments of 6,415 tons, valued at $215,149, in 1912. The total value of the imports of zinc and manufactures of zinc, in 1913, was $1,576,943, as compared with imports, valued at $1,824,519, in 1912.

NON-METALLIC PRODUCTS.

Actinolite.—A production of 66 tons, valued at $720, was reported in 1913, as compared with 92 tons, valued at $1,000, in 1912.

Arsenic.—Smelter returns show a production in 1913 of 1,692 tons of arsenious oxide, valued at $101,463, as compared with a production in 1912 of 2,045 tons, valued at $89,262.

The exports of arsenic in 1913 were 1,303 tons, valued at $107,094, as against 1,924 tons, valued at $101,310, in 1912. The imports of arsenious oxide in 1913 were 18,788 pounds, valued at $1,061, as compared with 76,528 pounds, valued at $1,722, in 1912. The imports of sulphide of arsenic in 1913 were 455,394 pounds, valued at $17,759, and in 1912, 451,928 pounds, valued at $19,431.

Asbestos.—The shipments of asbestos in 1913 were 136,951 tons, valued at $3,830,909, and of asbestic, 24,135 tons, valued at $19,016. The shipments in 1912 were of asbestos 111,561 tons, valued at $3,117,572, and of asbestic, 24,740 tons, valued at $19,707. The shipments in 1913 consisted of 5,660·3 tons of crude asbestos, valued at $989,162, and 131,291 tons of mill stock, valued at $2,841,747. Considerable quantities both of crude and of mill stock were held in manufacturers' hands at the close of the year.

Exports in 1913 were 103,812 tons of asbestos, valued at $2,848,047, as against 88,008 tons, valued at $2,349,353, in 1912. There were also exported in 1913, 24,766 tons of asbestic sand, valued at $138,737.

Imports of asbestos and manufactures of asbestos in 1913 were valued at $520,082, and in 1912, $461,449.

Chromite.—During 1913 and 1912 there were no shipments of chromite reported.

Coal.—The production of coal in 1913 was 15,012,178 tons, valued at $37,334,940, as against 14,512,829 tons, valued at $36,019,044, in 1912. The exports of coal in 1913 were 1,562,020 tons, valued at $3,961,351, as compared with 2,127,133 tons, valued at $5,821,593, in 1912. The total imports of coal in 1913 were 18,201,953 tons, valued at $47,949,119, as against imports in 1912 of 14,595,810 tons, valued at $39,478,037.

The 1913 imports included 10,743,473 tons of bituminous round and run of mine coal, valued at $21,756,658; 4,642,057 tons of anthracite and anthracite dust, valued at $22,034,839; and of bituminous slack, such as will pass through a $\frac{3}{4}''$ screen, 2,816,423 tons, valued at $4,157,622.

The 1912 imports included 8,491,840 tons of bituminous round and run of mine coal, valued at $16,846,727; 4,184,017 tons of anthracite and anthracite dust, valued at $20,080,388; and 1,919,953 tons of bituminous slack, such as will pass through a $\frac{3}{4}''$ screen, valued at $2,550,922. The consumption of coal in 1913 was approximately 31,582,545 tons, as against 26,934,800 tons in 1912.

Coke.—The total quantity of oven coke made in 1913 was 1,517,133 tons, the quantity sold or used was 1,530,499 tons, valued at $5,919,596; as compared with 1,406,028 tons made, in 1912, and 1,411,229 tons sold or used, valued at $5,164,331. The quantity of coal charged to coke ovens in 1913 was 2,247,913 tons, as compared with 2,053,807 tons in 1912. The exports of coke in 1913 were 68,235 tons, valued at $308,410, and in 1912, 57,744 tons, valued at $252,763. The imports of coke in 1913 were 723,906 tons, valued at $2,180,830, as compared with imports of 628,174 tons, valued at $1,702,856, in 1912.

Corundum.—The total sales of grain corundum in 1913 were 1,177 tons, valued at $137,036, as compared with sales of 1,960 tons, valued at $239,091 in 1912. Exports for 1913 were 1,077 tons, valued at $121,741.

Feldspar.—Shipments of feldspar in 1913 were 16,790 tons, valued at $60,795, as compared with 13,733 tons, valued at $30,916, in 1912. The exports are recorded as 15,966 tons, valued at $62,767, in 1913, and 12,779 tons, valued at $44,114, in 1912.

Fluorspar.—There was no fluorspar shipped in 1913, a small shipment of about 40 tons, valued at $240, being reported in 1912. Canadian furnaces in 1913 used 10,687 tons of fluorspar. Imports of hydrofluosilicic acid were 1,182,293 pounds, valued at $46,517.

Graphite.—Shipments of crude and milled graphite during 1913 totalled 2,162 tons, valued at $90,282, as against 2,060 tons, valued at $117,122, in 1912. The production of artificial graphite in 1913 was reported as 1,092 tons, as compared with 1,151 tons in 1912.

Exports of plumbago in 1913 are reported as 1,642 tons, valued at $85,368, and manufactures of plumbago valued at $24,284. Exports in 1912 were: plumbago 1,654 tons, valued at $70,763, and manufactures of plumbago valued at $58,920. Imports of graphite in 1913 were valued at $156,233, and included: plumbago not ground $9,375; blacklead $8,633; plumbago ground and manufactures of, $64,254; and crucibles of clay or plumbago, $73,971. In 1912 the imports were valued at $155,484, including: plumbago not ground $7,249; blacklead $9,587; plumbago ground and manufactures of, $56,324; and crucibles of clay or plumbago, $82,324.

Grindstones.—The production of grindstones, scythestones, and wood pulpstones, in 1913, was 4,837 tons, valued at $51,325, as compared with 4,412 tons, valued at $52,090, in 1912. The exports in 1913 were manufactured grindstones valued at $54,867; and in 1912 manufactured grindstones valued at $26,535. The imports of abrasives in 1913 included: grindstones valued at $145,247; burrstones, $1,784; emery in bulk, crushed or ground, $48,995; manufactures of emery, carborundum, etc., $135,654; pumice stone, $17,861; also iron sand, $10,168; sandpaper, $171,516; The 1912 imports comprised: grindstones valued at $112,020; burrstones, $1,409; emery in bulk, crushed or ground, $46,616; manufactures of emery, carborundum, etc., $130,571; pumice stone, $21,310; also iron sand, $13,347; sandpaper, $189,782.

Gypsum.—The total shipments of gypsum, crude and calcined, in 1913, were 636,370 tons, valued at $1,447,739, as compared with shipments of 578,458 tons, valued at $1,324,620 in 1912. The tonnage of gypsum mined or quarried in 1913 was 684,726, and the quantity calcined 147,532 tons.

In 1912, 549,856 tons of gypsum were mined or quarried, and 133,392 tons calcined. The shipments in 1913 included: crude gypsum 499,460 tons, valued at $615,493; ground gypsum 10,281 tons, valued at $20,576; and calcined gypsum 126,629 tons, valued at $811,670. In 1912 the shipments comprised: crude gypsum 453,577 tons, valued at $525,345; ground gypsum 15,487 tons, valued at $29,244, and calcined gypsum 109,394 tons, valued at $770,031

The exports of gypsum in 1913 were: 417,302 tons of crude gypsum, valued at $504,383, and gypsum ground or calcined, valued at $5,795. The 1912 exports were: 364,643 tons of crude gypsum, valued at $423,208, and gypsum ground, or calcined, valued at $6,495.

The imports of gypsum in 1913 were valued at $188,252, including: crude gypsum, 4,522 tons, valued at $21,763; ground gypsum, 2,496 tons, valued at $11,770; and plaster of Paris, 20,113 tons, valued at $154,719. The total value of imports in 1912 was $268,103, made up of: crude gypsum, 3,503 tons, valued at $16,254; ground gypsum, 7,072 tons, valued at $19,651; and plaster of Paris, 32,496 tons, valued at $232,198.

Magnesite.—Shipments of magnesite in 1913 were 515 tons, valued at $3,335, and in 1912, 1,714 tons, valued at $9,645. Imports of magnesia in 1913 were 290,975 pounds, valued at $12,226.

Manganese.—There were no shipments of manganese in 1913, a shipment of 75 tons, valued at $1,875, being reported in 1912. The exports in 1913 were 8 tons, valued at $303, as against 10 tons, valued at $300, in 1912. The 1913 imports included, 2,588 tons manganese oxide, valued at $46,990, as compared with 1,256 tons, valued at $27,707, in 1912.

Mica.—The value of the mica production in 1913, as reported by mine operators, was $194,304, as compared with $143,976 in 1912. The exports of mica in 1913 were 817,152 pounds, valued at $240,775, as against 895,338 pounds, valued at $334,054, in 1912.

Mineral Pigments.—Shipments of barytes in 1913 were 641 tons, valued at $6,410, as against 464 tons, valued at $5,104, in 1912. The production of iron ochres in 1913 was 5,987 tons, valued at $41,774, as compared with 7,654 tons, valued at $32,410, in 1912.

In 1913 there were no exports of barytes, exports for 1912 being 68 hundredweight, valued at $114. The exports of iron oxides in 1913 were 1,956 tons, valued at $18,931, as against 3,016 tons, valued at $34,513, in 1912. The imports in 1913 were: ochres and ochrey earth and raw siennas, 1,663 tons, valued at $43,119; and oxides, dry fillers, fireproof umbers, and burnt siennas, 4,387 tons, valued at $240,435, as compared with imports in 1912, comprising: ochres and ochrey earth and raw siennas, 1,737 tons,

valued at $40,165; and oxides, dry fillers, fireproof umbers, and burnt siennas, 762 tons, valued at $29,456.

Mineral Water..—The value of the production of mineral water in 1913 for which returns were received was $173,677, as compared with a value of $172,465, in 1912. The imports of mineral and aerated waters in 1913 were valued at $257,153, as against a value of $273,698, in 1912. The exports in 1913 were valued at $526, as against $4,667, in 1912.

Natural Gas.—The production of natural gas in 1913 was 20,478 million cubic feet, valued at $3,307,381, as compared with 15,287 million cubic feet, valued at $2,362,700, in 1912.

Peat.—Shipments of peat for fuel purposes in 1913 were 2,600 tons, valued at $10,100, as compared with 700 tons, valued at $2,900, in 1912.

Petroleum.—The production of crude petroleum shows a further falling off, but in quantity only, in 1913, the production being 228,080 barrels or 7,982,798 gallons, valued at $406,439; as compared with 243,336 barrels or 8,516,762 gallons, valued at $345,050, in 1912.

Exports of refined oil in 1913 were 24,273 gallons, valued at $3,188, and 36,945 gallons, valued at $6,147, in 1912. There was an export in 1913 of naphtha and gasoline of 17,875 gallons, valued at $4,284, crude, mineral oil, 3,650 gallons, valued at $379, and also an export of other oils, N.E.S., of 634,861 gallons, valued at $171,663, which may have included products of petroleum.

While the production has been decreasing the imports have been increasing; the total import of petroleum oils, crude and refined, in 1913, was 222,779,028 gallons, valued at $13,238,429, in addition to 1,628,837 pounds of paraffin wax and candles, valued at $109,897. The oil imports included: crude oil, 162,061,926 gallons, valued at $5,250,835; refined and illuminating oils 19,393,627 gallons, valued at $1,394,440; gasoline 29,525,180 gallons, valued at $4,822,941; lubricating oils 6,789,451 gallons, valued at $1,172,986, and other petroleum products 5,008,844 gallons, valued at $597,227.

The total imports in 1912 were 186,787,484 gallons, valued at $11,858,533, and 2,144,006 pounds of paraffin wax and candles, valued at $119,520. The oil imports included: crude oil, 120,082,405 gallons, valued at $3,996,842; refined and illuminating oils 14,748,218 gallons, valued at $1,012,735; gasoline 40,904,598 gallons, valued at $5,347,767; lubricating oils 6,763,800 gallons, valued at $1,077,712, and other petroleum products 4,288,463 gallons, valued at $423,477.

Phosphate.—Shipments of phosphate or apatite in 1913 were 385 tons, valued at $3,643, as compared with 164 tons, valued at $1,640, in 1912. There were no exports in 1913 or 1912. There was an export of phosphorus

in 1913, of 534,340 pounds, valued at $73,395; while in 1912, 543,620 pounds, valued at $66,806, were exported. The imports of phosphate rock (fertilizer) in 1913 were valued at $16,070; phosphorus, 17,600 pounds, valued at $5,856, and manufactured fertilizers valued at $505,904. The imports in 1912 included: phosphate rock (fertilizer), valued at $24,586; phosphorus, 13,807 pounds, valued at $4,012, and manufactured fertilizers valued at $580,351.

Pyrites.—The production of pyrites in 1913 was 158,566 tons, valued at $521,181, as compared with 81,526 tons, valued at $314,085, in 1912. The exports in 1913 were 46,066 tons, valued at $211,640, as against exports of 5,938 tons, valued at $11,935, in 1912. The imports of brimstone or sulphur in 1913 were 30,433 tons, valued at $633,114, as against 38,647 tons, valued at $806,690, in 1912.

Quartz.—The production of quartz in 1913 was reported as 78,261 tons, valued at $169,842, as compared with a production in 1912 of 100,242 tons, valued at $195,216. There were imported during 1913, 690 tons of silex or crystallized quartz, valued at $13,811, and 6,708 tons flint, valued at $60,718; and in 1912, 629 tons of silex, valued at $10,680, and 2,802 tons flint, valued at $39,891.

Salt.—The total sales of salt in 1913 were 100,791 tons, valued at $491,280, (exclusive of packages). The value of the packages used was $262,479. In 1912 the sales were 95,053 tons, valued at $459,582, and value of packages used $224,696.

Exports of salt in 1913 were 460,900 pounds, valued at $3,047, and in 1912, 289,150 pounds, valued at $3,723. The total imports of salt in 1913 were valued at $565,283, and included: 31,508 tons, valued at $147,775, subject to duty; and 112,939 tons, valued at $417,508, duty free. The 1912 imports were valued at $485,950, and included: 30,067 tons, valued at $133,869, subject to duty; and 109,639 tons, valued at $352,081, duty free.

Among the imports of soda products in 1913 are included: soda ash or barilla, 66,323,869 pounds, valued at $492,115; soda bichromate, 674,456 pounds, valued at $33,767; caustic soda in packages of 25 pounds or more, 15,896,076 pounds, valued at $286,432; sal soda 8,688,607 pounds, valued at $53,649; nitrate of soda, 80,721,971 pounds, valued at $1,645,320, and sulphate of soda, 25,902,190 pounds, valued at $133,030.

Talc.—The production of talc in 1913 was 12,250 tons, valued at $45,980, as against 8,270 tons, valued at $23,132, in 1912. Imports of talc for the calendar year 1913 were 402 tons, valued at $10,706.

Tripolite.—There were 620 tons of tripolite, valued at $12,138, shipped in 1913, and 38 tons, valued at $230, in 1912.

STRUCTURAL MATERIALS AND CLAY PRODUCTS.

Cement.—The total sales of cement in 1913 were 8,658,805 barrels, valued at $11,019,418, as against 7,132,732 barrels, valued at $9,106,556, in 1912, showing an increase of 1,526,073 barrels. The exports of cement in 1913 were valued at $1,739, as compared with exports valued at $2,436, in 1912.

The imports of cement in 1913 included: manufactures of cement valued at $17,729; and Portland cement 889,324 hundredweight (254,093 barrels), valued at $409,303. The imports in 1912 were: manufactures of cement valued at $9,698; and Portland cement 5,020,446 hundredweight (1,434,413 barrels), valued at $1,969,529. The consumption of Portland cement in Canada in 1913 was approximately 8,912,898 barrels, as compared with 8,567,145 barrels in 1912.

Clay Products.—The total value of the production of clay products in Canada in 1913 was $9,504,314,as compared with a total value of $10,575,709 in 1912. Brick and tile products alone were valued in 1913 at $7,805,750, as against $9,072,675 in 1912. The value of sewerpipe production in 1913 was $1,035,906, as compared with $884,641, in 1912. The only clay products exported in 1913 were 977,000 building brick, valued at $8,579, manufactures of clay valued at $27,201, and earthenware valued at $16,553; against 694,000 building brick, valued at $8,493, manufactures of clay valued at $256, and earthenware valued at $10,001, in 1912. The total imports of clay products in 1913 were valued at $6,760,752, and included: brick and tile valued at $3,121,592; earthenware and chinaware $3,314,870; and clays valued at $324,290. The total imports in 1912 were valued at $6,592,540, and included: brick and tile valued at $3,209,190; earthenware and chinaware $3,094,956, and clays valued at $288,394.

Kaolin.—In 1913 a shipment of 500 tons valued at $5,000 was reported, as compared with shipments in 1912 of 20 tons valued at $160.

Lime.—The total production of lime in 1913 was 7,558,484 bushels, valued at $1,609,398, as compared with 8,475,839 bushels, valued at $1,844,849, in 1912. The exports of lime in 1913 were valued at $29,234, as against exports valued at $35,097, in 1912. The imports of lime in 1913 were 386,693 barrels, valued at $238,271, and in 1912, 329,925 barrels, valued at $207,481.

Sand-Lime Brick.—The total sales of sand-lime brick in 1913 were 92,586,676, valued at $906,665, an avergae value of $9.79 per thousand. The sales in 1912 were 96,448,402, valued at $1,020,386, an average value of $10.58 per thousand.

Slate.—The production of slate in 1913 was 1,432 squares, valued at $6,444, and 1,894 squares, valued at $8,939, in 1912.

The imports of slate in 1913 were valued at $235,474, and included: roofing slate valued at $97,730; school writing slate, $51,953; slate pencils $9,166, and manufactures of slate, $76,625. The imports in 1912 were valued at $200,643, and included: roofing slate valued at $88,911; school writing slate $39,858; slate pencils, $6,978; and manufactures of slate, $65,896.

Stone—The total value of the production of stone of all kinds in 1913 was $5,504,639, as compared with a value of $4,726,171 in 1912. The value of stone exports in 1913 was $93,840, as against $33,242 in 1912; and the total value of stone imported in 1913 was $1,640,849, as against imports valued at $1,467,143, in 1912.

The production in 1913 included: granite, valued at $1,653,791; limestone, $3,204,091; marble, $249,975, and sandstone, $396,782. In 1912 the production of granite was valued at $1,373,119; limestone, $2,762,936; marble, $260,764, and sandstone, $329,352.

Sand and Gravel.—According to returns received which cannot be said to be complete, the production of sand and gravel in 1913 was valued at $2,258,874, as compared with $1,512,099, in 1912. The exports of sand and gravel in 1913 were 644,633 tons, valued at $440,956, and the imports 439,673 tons, valued at $440,343.

PRODUCTION BY PROVINCES.

A summary of the mineral production by provinces in 1912 and 1913 is shown in the accompanying tables, in the first of which the total production in the several provinces and the percentages of each, are given for the past three years. The provinces maintained the same order of magnitude of output with the exception that Saskatchewan replaced New Brunswick for the smallest production in 1913. Ontario continues as the largest contributor to the total, having a production of $59,167,749 or 40·6 per cent, as against $51,985,876 or 38·5 per cent of the total in 1912. British Columbia was second, with a production of $28,086,312 or 19·3 per cent of the total, as against $30,076,635 or 22·3 per cent of the total in the previous year. There was a falling off in the total in this Province, as also in Manitoba and Saskatchewan, all the other provinces showing an increased production. Nova Scotia, third in importance, had a production of $19,376,183 or 13·3 per cent of the total in 1913. Alberta in fourth place had a production of $15,054,046, or 10·3 per cent; Quebec occupied fifth place, with a production of $13,475,534 or 9·3 per cent. The Yukon district, Manitoba, New Brunswick, and Saskatchewan, follow in the order named.

In making these comparisons it should be remembered that Nova Scotia is not credited with the large production of pig-iron and steel at Sydney and Sydney Mines, which is made almost entirely from imported iron ores and is naturally not credited as Canadian mine product. Similarly a large proportion of the pig-iron production in Ontario is excluded from the total value, because it is derived from imported ores. The Province of Quebec also, is not credited with the production of aluminium at Shawenegan Falls, which is made from imported bauxite.

Mineral Production by Provinces, 1911, 1912, and 1913.

*Includes a small production of lime from Prince Edward Island.

MINE PRODUCTION.

Reference has already been made in the introduction to this report, to the compilation of a total value of the mineral production of Canada in which the metallic ores are included at the value of the ores as mined or shipped from the mines. Since 1910 this Branch has endeavoured to obtain from every mine operator in Canada, an annual return with respect to labour employed, wages paid, tonnage and value of ores or minerals mined, treated and shipped, and in the case of metallic ores the quantities of metals contained in the ores shipped or treated.

There are two industries: gold placer mining, and the production of crude petroleum for which it has not been possible as yet to obtain complete returns from the operators themselves, so that in these cases, while a record of production is available there is no record of the labour employed, nor the wages paid.

Statistics covering each of the past four years are shown in the accompanying tables. According to the records shown the total value of the mineral production on this basis was $126,444,201 in 1913, as against $120,332,966 in 1912, $91,876,084 in 1911, and $92,501,244 in 1910. Excluding placer and hydraulic workings and petroleum wells, the total number of shipping mines, clay works, quarries, etc., in 1913, was 1,529, as against 1,437, in 1912; the total number of men employed 71,011 in 1913, as against 66,734 in 1912: the total wages paid $50,368,602 in 1913, as against $45,502,479 in 1912.

The total number of metalliferous mines shipping in 1913, exclusive of placer and hydraulic workings, was 183 as against 163, in 1912; number of men employed in 1913, 12,437, as against 10,612 in 1912; wages paid $11,746,400 in 1913; compared with $10,113,578 in 1912: tons of ore mined 4,736,288 in 1913, as against 4,194,517 in 1912; tons of ore, concentrates or metal shipped from mines, 3,423,414, as against 3,360,451 in 1912; to total net value of shipments including placer gold $47,170,740 in 1913, compared with $46,457,423 in 1912.

In non-metalliferous mining exclusive of stone quarries, clay works, etc., and not including petroleum wells, there were employed in 1913 an average of 34,207 men, earning in wages $25,752,148, as against 33,954 men and $23,877,781 paid in wages in 1912. The tonnage mined in 1913, chiefly coal, was 18,636,039, and tons shipped, 16,198,066, as against 17,165,628 tons mined and 15,548,981 tons shipped in 1912. The total net value of the shipment in 1913 was $48,463,709, and $45,080,674 in 1912.

The manufacture of cement, clay products, and lime, and the quarrying of stone, etc., employed in 1913 an average of 24,367 men, to whom was paid in wages $12,870,054, and the net value of products shipped was $30,809,752. These operations in 1912 engaged an average of 22,168 men, earning $11,511,120 in wages, and the net value of the products shipped was $28,794,869.

It should be remembered that these records cover only active shipping mines and do not include the labour employed in prospecting or in developing new properties, nor is there included any record of the labour employed in the smelting and refining of ores, or in blast furnace operations.

The total value of the production given herewith is considerably less than that shown in the table of mineral production, given on page 3, the difference being due entirely to the fact that the values accruing through metallurgical reduction and refining, are not included in these tables. The values of the ores given herein are in general those furnished by the operators. In certain cases however, where mining, smelting, and refining operations are carried on by the same operator, it becomes a matter of no small difficulty to satisfactorily subdivide profits among the various operations, particularly when there is no general market for the class of ores treated, and it is quite possible that some of the values used are too low.

There has been added to the statement of ore shipment in 1913, a table showing the quantities of metals contained in the ores shipped, the record showing the total quantities of metals contained without any deductions or allowances being made for smelter or treatment losses. Comparison of this record of metal contents of ore shipments with statistics of the production of the metals is not in all cases feasible because of the long lapse of time between the shipment from the mine and the treatment at the smelter.

SMELTER PRODUCTION.

Statistics of the production of copper, lead, and silver smelters and refineries, showing the tonnage of ore treated, the matte, blister, base bullion, or refined metal produced, etc., have been collected by this Branch, since 1908.

The active smelting companies in 1913 were as follows:—

The Mond Nickel Company, Coniston, Ont.
The Canadian Copper Company, Copper Cliff, Ont.
The Coniagas Reduction Company, Thorold, Ont.
The Deloro Mining and Reduction Co., Deloro, Ont.
The Buffalo and Ontario Smelting Co., Kingston, Ont.
The Dominion Refineries, Ltd., North Bay, Ont.
The Metals Chemical Co., Ltd., Welland, Ont.
The North American Smelting Co., Kingston, Ont.
The Consolidated Mining and Smelting Co. of Canada, Ltd., Trail, B.C.
The Granby Consolidated Mining, Smelting and Power Co., Ltd., Grand Forks, B.C.
The British Columbia Copper Co., Ltd., Greenwood, B.C.

The total quantity of ores and concentrates treated in these works during 1913 was 3,037,391 tons, as compared with 3,005,410 tons in 1912. The largest proportion of the total tonnage about 70 per cent in 1913 consists of the copper-gold-silver ores of British Columbia, chiefly from the Boundary, (Phoenix and Greenwood), Rossland, and Coast (Britannia and Texada Island) districts. The nickel-copper ores of the Sudbury district, Ontario, contributed about 27 per cent of the tonnage, the balance being lead ores and other ores treated in lead furnaces and the silver-cobalt ores of Ontario.

The quantities of these several classes of ores smelted during the past six years have been as follows:—

Year.	Nickel-copper ores.	Silver-cobalt ores.	Lead ores.	Copper-gold silver ores.	Totals
1908	360,180	7,182	53,545	1,797,488	2,218,395
1909	462,336	8,384	54,539	1,850,889	2,376,148
1910	628,947	9,466	57,549	1,987,752	2,683,714
1911	610,834	9,330	55,408	1,517,981	2,193,553
1912	725,065	8,097	59,932	2,212,316	3,005,410
1913	823,403	6,124	88,110	2,119,754	3,037,391

The products obtained in Canada from the treatment of these ores include: pig lead produced at Kingston, Ont., refined pig lead and lead pipe produced at Trail, B.C.; and fine gold, fine silver, copper sulphate, and

antimony produced from the residues of the Trail lead refinery; silver bullion, white arsenic, nickel oxide, and cobalt oxide produced in Ontario, from the Cobalt District ores. Refined antimony was produced in New Brunswick in 1909. In addition to these refined products, blister copper, copper matte, nickel-copper matte, cobalt material or mixed nickel and cobalt oxides are produced and exported for refining outside of Canada.

The aggregate results of smelting and refining operations may be summarized as shown in the next table. Unfortunately the figures cannot be taken to represent the total production from smelting ores mined in Canada, since considerable quantities of copper and silver ores are still shipped to other smelters outside of Canada for smelting.

It should also be explained that the figures include the results of the treatment in British Columbia of a small quantity of imported ores.

Smelter and Refinery Production in Canada.

Matte, blister copper, and other smelter products obtained and exported for refining.	1909.	1910.	1911.	1912.	1913.

(2) Copper matte " " "
(3) Bessemer nickel-copper carrying small gold and silver values as well as metals, of the platinum group.
(4) Unrefined lead bullion carrying silver values.
(5) Cobalt material carrying nickel and silver values.

Nickel-Copper Ores.—These ores of the Sudbury district, together with a small tonnage from the Alexo mine in the district of Nipissing, Ontario, are treated in the smelters of the Canadian Copper Company at Copper Cliff, and the Mond Nickel Company at Coniston, formerly at Victoria Mines. In addition to the nickel and copper which will probably average slightly over 3 per cent nickel, and 2 per cent copper, these ores of the Sudbury district contain small amounts of gold, silver, platinum, and palladium. The present metallurgical practice involves the following processes:—

I. Roasting the ores in open heaps, to remove part of the sulphur.

II. Smelting in water-jacketed blast furnaces, to produce a low grade matte, containing 33 per cent copper-nickel and nearly all the precious metals.

III. Converting the furnace matte in Bessemer basic converters, to make a matte containing about 80 per cent copper-nickel.

IV. Refining the converter matte, separating the nickel, copper, and precious metals.

At the present time the first three processes only are carried on in Canada. The converter matte is shipped to the United States and to England for final treatment.

The total quantity of nickel-copper ore mined during 1913 was 784,697 tons and the quantity smelted 823,403 tons. There were produced 47,150 tons of Bessemer matte, containing 12,938 tons of copper and 24,838 tons of nickel. This is the largest production since the beginning of operations in 1886. In 1912 there were smelted 725,065 tons of ore, from which was produced 41,925 tons of Bessemer matte, containing 11,116 tons of copper and 22,421 tons of nickel.

Statistics of smelter production from these ores since the commencement of this industry are shown in the following table:

Smelter Production of the Nickel-Copper Ores of the Sudbury District.

Calendar Year.	Ore mined.	Ore smelted.	Matte shipped.	Value matte.	Nickel content of matte.	Copper content of matte.

Silver-Copper-Nickel-Arsenic Ores.—The first shipments of silver ores from the Cobalt district were made in 1904, and in 1906 the first works for the treatment of these ores in Canada were established by the Canadian Copper Company, at Copper Cliff, Ont. This plant was closed down however in 1913 because of the extended treatment of these ores in cyanide plants at the mines. Operations were continued at the plants of the Coniagas Reduction Company, at Thorold, and the Deloro Mining and Reduction Company, at Deloro, Ont., but that of the Canada Refining and Smelting Company, at Orillia, was not operated during 1913. At each of these plants when in operation, nickel and cobalt oxide are recovered in addition to silver bullion and white arsenic. Other smaller plants have been established at Kingston, North Bay, and Welland.

A large proportion of the ore tonnage shipped from the Cobalt district still sent to smelters in the United States, although during the past three

years there has been a considerable increase in the treatment of these ores by cyanidation and the recovery of silver at the mine in the form of bullion. Thus we find a further falling off, during 1913, in the recovery of silver at Ontario smelters and an increased amount of bullion produced at the mines.

The treatment of these ores in Ontario smelters during the past four years has given the following results:

—	1910.	1911.	1912.	1913.
Ore treated..... Tons.	9,466	9,330	8,097	6,124

†Fine ounces contained in silver bullion, fineness ranging from 850 to 998.

In his annual report on the mining industry tributary to the Temiskaming and Northern Ontario Railway, Mr. A. A. Cole, has published the following records of production at the three most prominent silver smelters.

Canadian Copper Company.

"In the autumn of 1912 the Canadian Copper Company decided to close up and abandon its Cobalt plant and since that time has accepted no cobalt ores."

"The following statement shows the ore treated and the production of the Cobalt plant of the Canadian Copper Company from the commencement of operations to their close in 1913."

Year.	Ore treated.	Silver fine.	Metallic.		White arsenic.
			Cobalt.	Nickel.	
	Pounds.	Ounces.	Pounds.	Pounds.	Pounds.

1912	2,288·77	4,824,632	129·0	50·7	636·7
1913	2,509·8	4,977,012	250·6	115·6	319·4
	11,021·02	21,077,455	500·3	198·3	2,393·4

Deloro Mining and Reduction Company, Ltd., Deloro, Ont.

"In order to increase the output of this company's plant at Deloro and at the same time effect certain economies in production extensive additions are under construction. The principal extensions consist firstly in the installation of a blast furnace of double the capacity of the present one."

"This, in conjunction with an increased capacity in the roasting plant will enable the company to handle from 300 to 400 tons of silver-cobalt ore per month. It is planned to balance the whole plant in proportion to this. Already various changes and additions have been made in the oxide plant which have materially increased the capacity of that section. With further additions which are now going on, the capacity will be still further increased in a comparatively short time, and as this means more work for the silver plant, on account of the increased quantity of revert, etc., the actual capacity of the silver plant for ore will be governed to some extent by the output of the oxide plant, hence the wide range in the smelting capacity quoted above."

"This plant treats both high grade ore and concentrates, as well as a limited quantity of those table concentrates which are highly silicious."

"It is expected to have extensions completed and the plant working to full capacity early in the spring of 1914. Already contracts have been closed covering the entire output of the oxide plant for a year ahead."

Production of Deloro Smelter, 1908 to 31st December, 1913.

	Ore treated.	Silver, fine.	Cobalt and mixed oxides.	Refined arsenic.
	Tons.	Ounces.	Tons.	Tons.
Previous to 1913	11,065	20,339,860	500	3,275
During 1913	2,920	6,350,500	190	893
	13,985	26,690,360	690	4,168

Lead Ores.—Two lead smelting plants were in operation during 1913. The small plant at Kingston, Ontario, built by the North American Smelting Company, and completed in 1912, was operated in 1913, chiefly on British Columbia and imported ores and lead waste. The lead smelter and refinery at Trail, B.C., owned by the Consolidated Mining and Smelting Company, treated practically all the lead ore mined in southern British Columbia with the exception of the small tonnage that went to Kingston.

In the lead refinery at Trail, the bullion from the smelter is cast into anodes and re-deposited electrolytically upon cathode sheets of refined lead. The refined lead is cast into pigs or manufactured into lead pipe. The slimes from the tank room carry gold, silver, antimony, arsenic, and copper.

The first two are recovered as fine metals, and the copper as copper sulphate. Antimony is also recovered, though not regularly, and bearing metal is manufactured.

The annual production of refined lead, fine gold and silver, and copper sulphate has been as follows:—

Calendar Year.	Refined lead.	Fine gold.	Fine silver.	Copper sulphate.
	Lbs.	Ozs.	Ozs.	Lbs.
1904	7,519,440	4,336	551,450	56,000
1905	15,804,509	8,602	1,088,328	77,175
1906	20,471,314	9,993	1,263,809	143,135
1907	26,607,461	10,395	1,631,422	97,751
1908	36,549,274	15,346	1,956,039	203,379
1909	41,833,614	18,241	2,003,003	51,405
1910	32,987,508	13,298	1,798,960	163,228
1911	23,525,050	15,270	1,325,601	197,187
1912	35,254,790	12,118	1,896,999	87,110
1913	36,218,784	11,977	2,433,002	130, 533

"At Trail the principal improvements have been alterations in the machine and blacksmith shops, and the transfer of machinery for these

shops from the old Le Roi plant; the re-building of one of the copper furnaces and increasing its length to thirty-five feet; preparation for installation of a new lead furnace, and for re-building the lead furnaces; preparations for the installment of a new blower and of cranes for handling material in the blast furnace building; re-building of the Heberlein plant to reduce costs of operation and to take care of increased tonnage of lead ores; including the installation of a crane for handling the Heberlein pots, and of a 24 x 36 jaw crusher and grab bucket for handling sinter, and the purchase of additional Heberlein pots; the purchase of additional electric locomotives; of two Wedge roasters to take care of increased tonnage of lead ores; the installation of a gas-producer for the Dwight and Lloyd roasters, to replace firing with gasoline."

Gold-Silver-Copper Ores of British Columbia.—Three copper smelters were active in British Columbia during 1913. These were the Trail copper furnace of the Consolidated Mining and Smelting Company, treating the ores of the Rossland camp and other ores of the district; the Grand Forks plant of the Granby Consolidated Mining, Smelting and Power Co., and the Greenwood plant of the British Columbia Copper Company, treating chiefly the low grade ores of the Boundary district.

On the Coast the Tyee Copper Company's furnace at Ladysmith was idle throughout the year. Construction was continued by the Granby Company on their new furnace at Anyox, Observatory inlet, Portland canal, which was completed and blown in on March 16, 1914.

The aggregate production of British Columbia copper smelters during the past five years including the foreign ores treated, was as follows:

—		1910.	1911.	1912.	1913.
Ore smelted	Tons.	1,987,752	1,517,981	2,212,316	2,119,754

Granby and Anyox Smelters.—The Granby smelter is situated at Grand Forks in the Boundary district, and the Anyox smelter at Observatory inlet, Portland canal; both are owned by the Granby Consolidated Mining, Smelting and Power Company. The ores treated at Grand Forks are those from the Company's mines at Phoenix together with a small tonnage of custom ore; while the Anyox smelter will treat the ores from the Hidden Creek properties.

The smelter at Anyox, which was not blown in until March of 1914, was described in the Engineering and Mining Journal, of January 3, 1914, from which the following extracts have been taken.

"The Hidden Creek reduction works of the Granby Consolidated Mining, Smelting & Power Co., Ltd., is rapidly approaching completion, and early in 1914 is expected to be ready for blowing in on ores from the company's mines nearby, in which some 8,000,000 tons of ore containing more than 20 per cent copper have been developed; and incidentally a much larger tonnage of lower-grade ore. Because of the higher tenor of the Hidden Creek ores, the new works of 2,000 tons daily capacity will produce as much copper as the older plant at Grand Forks, B.C., which smelts more than double this tonnage."

"The works are on Granby Bay, formerly called Goose Bay, an indenture in the western shore of Hastings Arm, which, with Alice Arm, merges into Observatory Inlet."

"The furnaces, of which there are three, are 50 inches wide by 30 feet long, and are the regular type of retangular water-jacketed matting furnace made by the Traylor Engineering & Mfg. Co. The furnaces are provided with 4½ inch tuyerers at 10 inch centers. The slag tap is at the side. The

converter room is in one end of the main smelter building, in which are three converter stands. The converters of the Great Falls type are 12 feet in diameter."

"The downtakes from the furnaces, and the flue from the converter hoods, lead into a large dust chamber by the side of the main smelter building. From the center of the chamber the main flue leads up the hill to the reinforced-concrete stack 22 feet in diameter by 153 feet high, the top of which is about 300 feet above the furnaces."

"The Granby Company has secured from the British Columbia government the right to reclaim a large area of ground by filling in a shallow-water area in Granby Bay directly in front of the smelter site with slag. Thus is a convenient dumping ground for the slag obtained, and as the dump grows, the area of the company's new-made land will gradually increase."

"Power will be generated at a hydro-electric plant, on Granby Bay, just below the smelter site. The water of Falls Creek will be impounded by a crib and rock-filled dam, one mile back of the smelter. A 6 foot wooden-stave pipe will convey the water from the reservoir to the Pelton wheels in the power house, at an available head of 400 feet."

"The company will, for the present, secure coke and such coal as is needed, from the Crow's Nest Pass mines, in southwestern Alberta and also from mines near Tacoma, Wash. Limestone for flux will come from a deposit on the Portland Canal, 25 miles below Stewart."

The Phoenix ores are of particular interest because of the low tenor of their metal values, their self-fluxing character, and the large tonnage treated. The percentage of metals contained has been decreasing and the recovery of metals during the year ending June 30, 1913, as shown in the Company's annual report was: copper 17·68 pounds; silver 0·208 ounces, and gold 0·0326 ounces per ton of ore smelted.

The first furnace of 300 tons capacity was completed in 1900, and since that date the capacity of the plant has been increased from time to time until at present there are eight furnaces with a total capacity of about 4,500 tons per day. The converter plant was first installed in 1902, and enlarged in 1909.

The quantities of ores smelted and the total production of metals shown in the accompanying table, are compiled from the Company's annual published reports.

The blast furnace department was operated throughout the year and handled:—

Granby ore	1,264,690	tons.
Foreign ore	15,179	"
Converter slag and matte	48,078	"
Flue dust	4,422	"

Average per cent of coke used per ton of ore 13·36.

The tonnage of ore smelted during the year was 1,279,869, as against 739,519 in 1912, and 984,346 in 1911.

The average smelting cost for the year was $1.214, as against $1.256 in 1912.

The converting department produced 22,683,181 lbs. of copper in 1913, as against 13,226,360 lbs. in 1912, and 17,858,860 lbs. in 1911. The converters in 1913 handled 34,500 tons of 32·9 per cent matte.

Greenwood Smelter.—The plant of the British Columbia Copper Company, at Greenwood, B.C., includes three large furnaces, having a total daily capacity of from 2,400 to 2,500 tons, and a converter plant.

The last annual published report of the Company covering the year ending December 31, 1913, contains the following references to smelting operations:—

"Six hundred and twelve thousand nine hundred and seven (612,907) tons of ore were treated at the company's smelter, being:

353,422 tons of British Columbia Copper Co.'s ore, and
259,485 tons of custom ore.

"There were produced—

8,296,902 lbs. of fine copper;
137,051·72 ozs. of silver;
26,640·629 ozs. of gold;

the proceeds of which, with miscellaneous earnings, amounted to $1,904,694.52."

"Owing to shortage of ore, the smelter was unable to operate at more than 82 per cent of actual capacity. During a period covering about four months, at two different times, it was attempted to run three furnaces; the balance of the year the two large furnaces were in operation. As against this the individual furnace efficiency was the highest ever attained at this plant. The slags showed lower metal losses than for any previous year."

"Costs were higher for several reasons: shortage of ore; extra labour on coke stock pile, occasioned by various periods of coke shortage; many expensive renewals and repairs to plant and machinery, which were taken up in operation expenses; same overhead expenses as when running full capacity."

General Operating Cost—

"The yield in gold, copper, and silver from the company ores was less than ever before. A comparative table is shown below as against the results for 1912."

——	1912.	1913.
Yield of copper per ton of B.C. Copper Co.'s copper-bearing ores.....Lbs.	13,600	12,175
Yield of gold and silver in B.C. Copper Co.'s ores.....	$0·762	$0·573
Average price realized for copper.....	16·664c.	15·071c.
Cost of producing copper from B.C. Copper Co.'s ores, crediting expenditure with gold and silver contents of ore; per lb. of fine copper.....	12·855 c.	17·903c.
Cost per ton of handling ore, including all expenses from ' ore in place' to sale of the contained metals.....	$2·4596	$2·8108
