# IRON AND STEEL.

## Introductory.

The actual quantity of iron ore derived from Canadian iron mines during 1918 was, with the exception of the year 1911, the lowest since 1900.

During the past 18 years the production has varied between a minimum of 122,000 tons and a maximum of 404,000 tons and for many years has not contributed more than 5 per cent of domestic requirements in iron.

The metallurgical industry based upon imported ores has continued to develop and in both pig-iron and steel attained its maximum output during 1918, but is still supplying but a fraction of Canada's requirements in manufactured iron and steel products.

The average annual production of pig-iron during the last seven years has been a little in excess of 1,000,000 tons, a large percentage of which has been converted into steel. The annual production of steel has nearly doubled since 1912 amounting during 1918 to 1,873,708 tons. Supplementing the domestic production of steel the annual imports of iron and steel products in so far as it is possible to determine the quantities has for a number of years considerably exceeded 1,000,000 tons.

Notwithstanding the country's heavy imports a considerable export was made during the war more particularly of ferro-alloys, billets, bars and rods, rails and wire.

## Summary of Iron and Steel Statistics, 1915-18.

## IRON ORE.

The total shipments of iron ores from Canadian mines show a further falling off in 1918, being only 211,608 short tons valued at \$885,893, or an average of \$4.18 per ton as compared with shipments in 1917 of 215,302 tons valued at \$758,621, or an average of \$3.52 per ton. The 1918 shipments included 8,159 tons from Quebec; 201,119 tons from mines in Ontario, and 2,200 tons mined in British Columbia. The ores comprised 171,312 tons of hematite and roasted hematite and siderite, 33,066 tons of magnetite, 6,330 tons of ilmenite and titaniferous ore, and 900 tons (dry) of bog ore.

The principal operations were as usual in Ontario at Helen and Magpie mines of the Algoma Steel Corporation, Ltd., all the ores mined being first roasted in the rotary kilns at Magpie before shipment. The magnetite properties at Sellwood were operated throughout the year by Moose Mountain, Limited, with an important production of briquettes from the milling and briquetting plant. The ore milled averaged about 33.8 per cent in iron, while the briquettes produced contained about 61.1 per cent iron. Shipments of 741 tons were made from three small properties in eastern Ontario.

In Quebec shipments of ilmenite were made from Ivry-on-the-Lake in Terrebonne county, and of titaniferous ore from St. Urbain on the north shore of the St. Lawrence. Some magnetite was also shipped from ore dumps at the old Forsyth mine in Hull township.

In British Columbia some magnetite was shipped from Texada Island and a small tonnage of bog ore from near Alta Lake on the Pacific Great Eastern Railway.

## Exports and Imports of Iron Ore.

Mine operators reported the quantity of iron ore sold for export to the United States during 1918 as 118,472 tons and the quantity shipped to Canadian furnaces 93,136 tons. In 1917 the quantity reported directly by operators as sold for export was 169,252 tons and that shipped to Canadian destinations 46,050 tons. These records differ slightly from those reported in the Trade Reports based on Customs Department statistics and shown in the accompanying table. The United States Department of Commerce record of imports from Canada is also given for comparison.

According to returns received from blast furnace operators the quantity of imported ores charged to blast furnaces during 1918 were 2,146,995 tons as against 2,084,231 tons in 1917. The imported ores charged in 1918 included 754,622 tons from Newfoundland and 1,392,373 tons from the United States "Lake District". In 1917 the imported ores charged included 874,134 tons from Wabana, Newfoundland, and 1,210,097 tons of United States "Lake Ores". The total quantity of imported ores charged to Canadian blast furnaces since 1886 has been 23,640,120 tons while the total quantity of iron ore shipped from Canadian mines during the same period was 6,186,387 tons.

\*Imports of iron ore separately stated in Customs Reports from April 1912 only.

## Production of Iron Ore in Newfoundland.

The iron ore deposits at Wabana, Newfoundland, are owned and operated by the two Canadian companies operating coal mines and steel plants at Sydney and Sydney Mines, Cape Breton. The shipments from Wabana mines during 1917 were 883,346 short tons, all of which went to Cape Breton. The total shipments from Wabana since the mines were first operated in 1895 have amounted to 18,269,616 short tons, of which 12,470,861 tons were sent to Nova Scotia, 2,078,197 tons to the United States, and 3,720,558 tons to Great Britain and Europe.

## IRON ORE PRICES.

The prices of Canadian iron ores are naturally based on prices current in the United States. "Lake Ores", that is, those originating in what is generally known as the Lake Superior iron region, and which contributed about 80 per cent of the iron and steel requirements of the United States are quoted per gross ton delivered at Lake Erie ports. Ore prices and freights are usually fixed at the beginning of each season, and the price of any individual ore then depends on its variation from the standard in iron and phosphorus content, etc.

## Annual Shipments of Iron Ore, from Wabana Mines, Newfoundland.

Calendar Year.	To Nova Scotia.	To United States	To Great Britain and Europe.	To Total Shipments.

1918.....	848,574			848,574
Total.....	12,470,861	2,078,197	3,720,558	18,269,616

Bessemer ores are quoted on the basis of 55 per cent iron natural and 0.045 per cent phosphorus dried at 212° F. The base for Non-Bessemer ores is 51.5 per cent iron natural.

Iron ore prices per gross ton during the past four years have been as follows:—

	1914 and 1915.	1916.	1917 to July 1st, 1918.	From July 1st, 1918, to Oct. 1st, 1918.	From Oct. 1st, 1918.	From April 28th, 1919.
Old Range Bessemer.....	\$ 3 75	\$ 4 45	\$ 5 95	\$ 6 40	\$ 6 65	\$ 6 45
Messabi Bessemer.....	3 50	4 20	5 70	6 15	6 40	6 20
Old Range Non-Bessemer.....	3 00	3 70	5 20	5 65	5 90	5 70
Messabi Non-Bessemer.....	2 85	3 55	5 05	5 50	5 75	5 55

Since 1900 the price of Old Range Bessemer ores has ranged between a minimum of \$3 in 1904 and a maximum of \$6.65 in 1918, Non-Bessemer ores being generally from 50 to 80 cents lower.

### Lake Freight Rates.

Lake freight rates on iron ore from upper lake ports to Lake Erie during the past four years have been as follows, in cents per ton:—

	1914.	1915.	1916.	1917.	1918.
From Escanaba, Mich..... cents.	35	25	35	75	
“ Marquette, Mich..... “	45	35	45	90	
“ the head of the Lakes..... “	50	40	50	100	

### Iron Ore Production in the United States.

The shipments of iron ore from the Lake Superior district during 1918 including both rail and water shipments were 59,779,794 gross tons as compared with 63,481,321 tons shipped in 1917. The shipments in 1916 were 66,658,466

gross tons; in 1915, 47,272,751 gross tons; in 1914, 32,729,726 gross tons and in 1913, 49,947,116 gross tons.

The total shipments of iron ore from all sources in the United States were in 1918 72,021,202 gross tons, as compared with 75,573,207 gross tons in 1917; 77,870,553 gross tons in 1916; 55,493,100 gross tons in 1915; 41,439,761 gross tons in 1914 and 61,980,437 gross tons in 1913.

During the past twenty years the Lake Superior district has supplied from 80 to 95 per cent of the total United States production.

### Pig-Iron.

The total production of pig-iron in Canada in 1918 excluding the production of ferro-alloys was 1,195,551 short tons (1,067,456 gross tons) having a value of \$33,495,171 as compared with a total production in 1917 of 1,170,480 short tons (1,045,071 gross tons) valued at \$25,025,960. Of the total production 1,163,520 short tons were made in blast furnaces and 32,031 tons were manufactured in electric furnaces from scrap steel, chiefly shell turnings. In 1917 the blast furnace production was 1,156,789 tons and the electric furnace production from scrap steel was 13,691 tons. Thus, although the total production of pig-iron was greater than in any previous year the blast furnace production was less in 1918 than the output of 1916. The recovery of high grade low phosphorus pig-iron in electric furnaces from steel turnings was in 1918 nearly two and one-half times the production in 1917, the first year that these operations were undertaken.

\*From the *Iron Age*, New York.

The production of blast furnace pig-iron in Nova Scotia in 1918 was 415,870 tons as against 472,147 tons in 1917 and with the exception of the year 1914 was the smallest production in this Province since 1911. In Ontario the production of blast furnace pig-iron was 747,650 tons as against 684,642 tons in 1917 and was the largest production made in this Province.

Pig-iron was made from scrap in electric furnaces in three provinces; 7,449 tons in Quebec and 24,582 tons in Ontario and British Columbia, the production in the latter Province being a little over 2,000 tons.

By grades the 1918 production included: Basic, 966,409 tons; Bessemer, 15,415 tons; foundry and malleable, etc., 181,696 tons; low phosphorus iron (electric furnace), 32,031 tons. The 1917 production included: Basic, 961,656 tons; Bessemer, 14,092 tons; foundry and malleable, 181,041 tons; low phosphorus (electric furnace), 13,691 tons.

The quantities of ores, fuels and flux charged to blast furnaces during the past ten years is shown in the following table. In 1918 about 95.6 per cent of the ore charged, 60.5 per cent of the coke, and a large proportion of the limestone, were imported. Previous to 1896 the entire Canadian pig-iron production was from Canadian ores but since that date increasing quantities of imported iron ore have been used.

The iron industry at Sydney and North Sydney has been built up on the basis of the Newfoundland Wabana ores and the local coal supply, while in recent years a portion of the limestone required has also been obtained from Port au Port, Newfoundland. In Nova Scotia, therefore, while the fuel is all domestic, the ore is practically all imported, though from a British colony.

In Ontario large quantities of United States "Lake ores" are used. All the fuel used, with the exception of a small quantity of charcoal is imported either as coke, or as coal for charging the by-product coke ovens at Sault Ste-Marie. A portion of the limestone flux is also obtained from quarries situated in the United States. In 1918, Ontario furnaces used 1,392,373 tons of imported ores and 96,745 tons Canadian ores, the percentage being 93.5 per cent imported and 6.5 per cent Canadian. In 1917, Ontario furnaces used 1,210,097 tons of imported ores and 92,065 tons of Canadian ores, the percentage being 93 per cent imported and 7 per cent Canadian. In 1916, 1,050,404 tons of imported ore, or 82.6 per cent of the total, and 221,273 tons of Canadian ores, or 17.4 per cent of the total, were charged. In 1915, 623,094 tons of imported ore, or 68 per cent of the total, and 293,305 tons or 32 per cent of Canadian ores were charged.

## Iron Ore, Fuel, and Flux charged to Blast Furnaces.

### Iron Blast Furnaces in Canada in 1918.

Of 20 furnaces, 15 were in blast in 1918 for varying periods of time. The total daily capacity of the 20 furnaces was about 4,890 gross tons. The operating companies, with numbers and capacities of furnaces, were as follows:—

Dominion Iron & Steel Co., Sydney, C.B.: Six completed furnaces; one of 350 tons capacity and five of 250 tons capacity each per day; three operated practically throughout the year; one for 337 days and one for 40 days; one furnace idle throughout the year.

Nova Scotia Steel & Coal Co., Ltd., New Glasgow, N.S.: Two stacks and one set of stoves at Sydney Mines, C.B., of 250 tons capacity; operated throughout the year.

Londonderry Iron & Mining Co., Ltd., Londonderry, N.S. (in liquidation): One furnace of 100 tons capacity idle throughout the year; not operated since 1908.

Midland Iron & Steel Co., Ltd., Midland, Ont.: Taking over Midland blast furnace plant of Canada Iron Foundries, Ltd., of Montreal, Que. One furnace of 130 tons capacity at Midland, Ont., operated 82 days.

Standard Iron Co., Ltd., Deseronto, Ont.: One furnace at Deseronto with a daily capacity of 55 tons, operated 312 days; one furnace of 65 tons at Parry Sound, idle throughout the year, not operated since 1913—sold to and being re-built by the Parry-Sound Iron Co., Ltd., Midland.

The Steel Company of Canada, Ltd., Hamilton, Ont.: Two furnaces, one of 260 tons capacity, operated for 313 days, a second furnace of 430 tons capacity operated 365 days.

Algoma Steel Corporation, Ltd., Sault Ste. Marie, Ont.: Four furnaces at Steelton, near Sault Ste. Marie, two of 300 tons capacity each; one of 500 tons and one of 400 tons. No. 1 in blast 365 days; No. 2, 309 days; No. 3, 281 days and No. 4, 278 days.

The Atikokan Iron Co., Ltd., Port Arthur, Ont.: One furnace of 175 tons capacity idle throughout the year, not operated since 1911.

The Canadian Furnace Co., Ltd., Port Colborne, Ont.: One furnace of 325 tons capacity operated 365 days in 1918.

## Electric Furnace Plants making Pig-Iron from Scrap Metal, Chiefly Steel Turnings.

Fraser, Brace & Co., Ltd.: Furnace plant at Shawinigan Falls, Que.: One single phase 6-ton non-tilting furnace.

Electro Foundries, Ltd., Orillia: One 6-ton three phase type non-tilting electric furnace.

Wm. Kennedy & Sons, Collingwood: One 4½-ton three phase non-tilting electric furnace.

Turnbull Electro Metals, Ltd., St. Catharines, Ont.: One 6-ton three phase non-tilting electric furnace.

British Forgings, Ltd., Toronto, Ont.: An electric steel furnace plant comprising two 6-ton Heroult furnaces some of which were used for the production of pig-iron during a portion of 1917 and 1918.

Tivani Electric Steel Co., Ltd., Belleville, Ont.: This electric steel plant which includes three small furnaces was operated for the production of ferro-molybdenum during 1917, but in March 1918, began the production of pig-iron.

Bowmanville Foundry Co., Ltd., Bowmanville, Ont.: One ½-ton Gronwall Dixon electric furnace.

Hull Iron & Steel Foundries, Hull, Que.: One 6-ton three phase tilting type electric furnace—first production in April 1918.

Electric Smelting Co. of Brantford, Ltd., Hull, Que.: One 4-ton electric furnace—first production in June 1918.

Columbia Iron & Steel Co., Ltd., Port Moody, B.C.: One 6-ton Heroult electric furnace—first production in May 1918.

Tudhope Electro-Metals, Ltd., Vancouver, B.C.: One 5-ton stationary three phase electric furnace, first operated Dec. 29, 1918.

## Ferro-Alloy Production.

The production of ferro-alloys in Canada in 1918, chiefly ferro-silicon but including also spiegeleisen, ferro-molybdenum, and ferro-phosphorus, all with the exception of the spiegeleisen being made in electric furnaces, reached a total of 44,704 tons valued at \$4,731,521. In 1917 the production was 43,465 tons, valued at \$3,549,814. The ferro-silicon production during the past two years includes a small tonnage of low grade ferro-silicon recovered as a by-product in the manufacture of abrasives from bauxite in electric furnaces.

The total production in 1916 which included only ferro-silicon, ferro-molybdenum and ferro-phosphorus made in electric furnaces, was 28,628 tons, valued at \$1,777,615, as against 10,794 tons, valued at \$753,404 in 1915; 7,524 tons, valued at \$478,355 in 1914, and 8,075 tons, valued at \$493,018 in 1913. In 1912 the production was 7,834 tons, valued at \$465,225 and in 1911, 7,507 tons, valued at \$376,404.

## Ferro-Alloy Plants in 1918.

Canadian Ferro-Alloys, Ltd., Shawinigan Falls, Que.: One 1½-ton stationary type electric furnace producing 50% ferro-silicon.

Leaside Munitions Company, Ltd., Beaupre, Que.: Three stationary type electric furnaces with capacity of 10 gross tons per 24 hours each producing 50% and 85% ferro-silicon.

Electro-Metals, Ltd., Welland, Ont.: Plant includes 8 electric furnaces producing ferro-silicon of 25%, 50%, 75%, and 85% grades.

Tivani Electric Steel Co., Ltd., Belleville, Ont.: Small electric furnaces comprising three units of two furnaces each making ferro-molybdenum in 1917 and for a few months only in 1918.

International Molybdenum Co., Ltd., Orillia, Ont.: Two small electric furnaces producing ferro-molybdenum in 1917 and for a few months only in 1918.

Algoma Steel Corporation, Sault Ste. Marie, Ont.: Producing spiegeleisen in blast furnace.

The following firms were also recovering low grade ferro-silicon as a by-product in the manufacture of artificial abrasives in electric furnaces from bauxite:—

D. A. Brebner, Ltd., Hamilton, Ont.

National Abrasive Co., Niagara Falls, Ont.

The Exolon Company, Thorold, Ont.

The Norton Company, Chippewa, Ont.

The Canadian Aloxite Co., Niagara Falls, Ont.

### Exports and Imports of Pig-Iron.

The exports of pig-iron during 1918 were reported as 2,130 tons valued at \$169,495, or an average of \$79.58 per ton as against exports during 1917 of 12,081 tons valued at \$423,814, or an average of \$35.08 per ton. The exports of ferro-alloys during 1918 were 23,781 tons valued at \$2,671,434, or an average of \$112.33 per ton as compared with exports during 1917 of 33,212 tons valued at \$2,616,924, or an average of \$78.79 per ton. The pig-iron exported during 1918 mainly comprised electric furnace production of low phosphorus iron.

The exports between 1905 and 1913 did not exceed 10,000 tons in any one year, and consisted largely, if not entirely, of ferro-alloys. During 1914, however, there was a small export of pig-iron, chiefly from Sydney to Philadelphia. The exports during the first three months of the year were 4,431 tons, which probably included about 4,000 tons of pig-iron. From the first of April the exports were separately classified and during the last nine months of the year included 9,767 tons of pig-iron valued at \$118,111, or an average of \$12.09 per ton, and 4,865 tons of ferro-alloys valued at \$285,221, or an average of \$58.63 per ton.

### Annual Exports of Pig-Iron and Ferro-alloys, 1915-18.

Calendar Year.	Pig-iron.			Ferro-alloys.		
	Short tons.	Value.	Average value.	Short tons.	Value.	Average value.
1915.....	17,307	\$ 231,551	13-38	9,238	\$ 537,081	58-14
1916.....	23,304	374,383	16-07	22,802	1,352,013	59-29
1917.....	12,081	423,814	35-08	33,212	2,616,924	78-79
1918.....	2,130	169,495	79-58	23,781	2,671,434	112-33

The imports of pig-iron during 1918 as shown by the Canadian Customs records, were 67,396 tons valued at \$2,102,406, or an average of \$31.19 per ton, and the imports of ferro-alloys were 35,284 tons valued at \$4,283,133 or an average of \$121.39 per ton, making a total of 102,680 tons valued at \$6,385,539.

Of the total imports of pig-iron in 1918, 67,385 tons valued at \$2,101,798 were derived from the United States, and of the total imports of ferro-alloys 25,168 tons valued at \$2,315,046 originated in the United States. The total imports of pig iron and ferro-alloys from the United States were thus 92,553 tons valued at \$4,416,844.

As against this record the United States Department of Commerce shows exports to Canada during the same period of pig-iron and ferro-alloys amounting to 122,325 gross tons (137,004 short tons) valued at \$5,661,228, a quantity considerably higher than the Canadian record.

The total imports of pig-iron and ferro-alloys during 1917 were 96,218 tons valued at \$4,793,492 of which amount 91,809 tons valued at \$4,206,265 were credited to the United States. The United States Department of Commerce trade records on the other hand show exports to Canada of the same products amounting to 171,147 short tons, valued at \$6,279,651.

Previous to 1907 the annual imports of pig-iron varied from less than 20,000 tons to nearly 100,000 tons per annum. In 1907, however, the imports exceeded 250,000 tons and during each of the years from 1910 to 1913 inclusive, the imports exceeded 200,000 tons.

The annual imports of ferro-alloys during the past few years have varied between 11,000 tons and 35,000 tons, having reached a maximum in 1918.

### Annual Imports of Pig-Iron showing Country of Origin.

	4,272.3	583,477	8,556.2	1,446,513	12,828.5	2,029,990

The total quantity of pig-iron and ferro-alloys used in Canada arrived at by adding to the production the excess of imports over exports amounted in 1918 to 1,316,025 tons, as against 1,264,870 tons, in 1917, and 1,224,686 tons in 1916. Of the total amount consumed in 1918, 942,234 tons are reported as having been used in steel furnaces, leaving 373,791 tons credited to foundry and other uses. The consumption in steel furnaces included 897,537 tons of pig-iron and 44,697 tons of ferro-alloys.

The annual consumption since 1910 compiled upon the same basis is shown in the following table.

### Consumption of Pig-Iron and Ferro-alloys.

Year.	Used in steel furnaces.		Credited to foundry and other uses.	Total consumption.* Short tons.
	Pig-iron.	Ferro-alloys.		
1910.....	690,913	8,143	361,914	1,060,970
1911.....	700,679	21,359	422,847	1,144,885
1912.....	735,559	24,237	548,024	1,307,820

1918.....	897,537	44,697	373,791	1,316,025

\* Production of pig-iron and ferro-alloys plus excess of imports over exports.

**BOUNTIES.**—A further attempt was made in 1918 to stimulate the production of pig-iron by means of bounty payments, though the assistance offered applies only to British Columbia.

The following Act received the sanction of the Provincial Government:—

“An Act respecting Bounties on Iron produced in the Province”, (Assented to 23rd April, 1918.)

“His Majesty, by and with the advice and consent of the Legislative Assembly of the Province of British Columbia enacts as follows:—

1. This Act may be cited as the “Iron Bounties Act”.
2. The Lieutenant-Governor in Council may enter into an agreement with any person, persons, or corporation whereby the Province will pay to such person, or persons, or corporation, out of the Consolidated Revenue Fund, bounties on pig-iron when manufactured within the Province, as follows:—

(a) In respect of pig-iron manufactured from ore, on the proportion produced from ore mined in the Province, a bounty not to exceed three dollars per ton of two thousand pounds:

(b) In respect of pig-iron manufactured from ore, on the proportion produced from ore mined outside the Province, a bounty not to exceed one dollar and fifty cents per ton of two thousand pounds.

3. Bounty, as on pig-iron under this Act, may be paid upon the molten iron from ore which in the electric furnace, Bessemer or other furnace enters into the manufacture of steel by the process employed in such furnace; the weight of such iron to be ascertained from the weight of the steel so manufactured.

4. The Minister of Mines shall be charged with the administration of this Act.

5. The Lieutenant-Governor in Council may make regulations to carry out the intent of this Act.

6. No bounty shall be paid under the provisions of this Act in respect of iron or steel manufactured after the thirty-first day of December, 1923."

No bounty on production was offered by the Dominion Government but because of the restriction on exports from the United States and the war necessity for an increased supply of pig-iron the War Trade Board was authorized by the Government under authority of Order-in-Council P.C. 1187 approved on the 18th of May, 1918. "To enter into communication with responsible parties for the rehabilitation of dormant blast furnaces and the construction of new undertakings for the production of pig-iron in Canada on the basis of a government guarantee for the purchase of their product for a series of years and at such reasonable prices as may be agreed upon and that a report thereon be made to the Government with the least possible delay".

Agreements were subsequently entered into with two firms for the re-building and operation of the dormant blast furnace plants at Midland and Parry Sound respectively. This form of assistance was, however, entirely a war measure and has been terminated in August of 1919.

Bounties were formerly paid by the Dominion Government during the years 1896 to 1912 inclusive, the total payments on account of iron and steel produced having been \$16,785,827 of which \$7,097,041 was paid on pig-iron; \$113,674 on puddled iron bars; \$6,706,990 on steel; and \$2,868,122 on manufactures of steel. The last bounty Acts were Chapter 24, Statutes of Canada 1907 and Chapter 33, Statutes of Canada 1910. (For copies see Annual Report on Mineral Production of Canada 1910).

## STEEL.

The production of steel during 1918 was reported from 27 separate plants (including 8 electric furnace plants) operated by 24 companies, being the same number of plants as were active in 1917.

The total production of steel ingots and direct steel castings during 1918 was 1,873,708 short tons (1,672,946 gross tons) as compared with 1,745,734 short tons (1,558,691 gross tons) in 1917. The 1918 production was more than double that of 1914.

The 1918 production included open-hearth steel 1,746,334 tons; electric steel 119,130; crucible and converter steels 8,244 tons. In 1917 the open-hearth production was 1,685,715 tons; electric steel 50,467 tons; crucible and converter steels 9,552 tons. In 1916 the open-hearth production was 1,400,883 tons; electric steel 19,639 tons; Bessemer, crucible, and other steels 7,727 tons.

The production of electric steel in 1915 was 5,625 tons, and in 1914 the first year for which a production was reported, 61 tons.

The total production of pig-iron, ferro-alloys, and steel in electric furnaces in 1918 was 191,869 tons as against a corresponding production in 1917 of 101,031 tons.

Statistics of the production of steel ingots and direct steel castings since 1894 are given in the following table. The figures for 1894 to 1906 inclusive have been collected and published by the American Iron and Steel Association, those for the years 1907 to 1918 have been collected by this Department.

## Annual Production of Steel Ingots and Castings.

(In short tons.)

Year.	Steel Ingots.				Steel Castings.			Total ingots and castings.
	Open-hearth.	Bessemer.	Electric and other steels.	Total ingots.	Open-hearth.	Electric and other steels.	Total castings.

**MATERIALS CHARGED TO STEEL FURNACES:**—The total quantity of pig-iron used in steel furnaces during 1918 was 897,537 tons of which 818,394 tons were produced by the firms reporting and 79,143 tons purchased. The quantity of ferro-alloys used was 44,697 tons, which included 8,720 tons of ferro-silicon and 35,977 tons of ferro-manganese and spiegeleisen. The total quantity of scrap iron and steel used was 1,068,434 tons of which 515,302 tons originated with the firms reporting and 553,132 tons were reported as purchased.

Ores used included 59 tons of manganese ore and 48,599 tons of iron ore, while 243,383 tons of limestone and dolomite were used and 17,307 tons of fluorspar.

In 1917 the quantity of pig-iron used, 1,112,082 tons included 993,805 tons produced by the firms reporting and 118,277 tons purchased. The scrap iron and steel used, 1,022,456 tons, included 527,400 tons originating with the firms reporting and 495,056 tons reported as purchased.

A record of materials used in steel furnaces covering the past nine years is shown in the following table:—

## Pig-Iron, Scrap Iron, and other Materials Charged to Steel Furnaces.

(In short tons.)

Year.	Pig-iron.	Ferro-alloys.	Scrap Iron and Steel.	Iron Ore.	Manganese Ore.	Fluorspar.	Limestone and Dolomite.
1910.....	690,913	8,143	211,453	39,332	1,317	7,461	144,110

*in steel furnaces  
used in which 993,805 (897,706) was used*

The tabulated statement shows the increasing quantities of scrap metal used in the production of steel. In 1918 much more than half the iron charged to the furnaces was in the form of scrap metal. For each 100 tons of pig-iron used in 1918 the quantity of scrap charged was 119 tons. In 1917 the quantity of scrap used was 91 tons to each 100 tons of pig-iron and in the two preceding years the ratios were 55.2 tons and 46.3 tons respectively.

The exports of scrap-iron and steel in 1918 are reported as 51,545 tons valued at \$853,097, or an average of \$16.55 per ton, as against exports in 1917 of 176,571 tons valued at \$2,300,022, or an average of \$13.02 per ton, and exports in 1916 of 114,300 tons valued at \$1,357,018, or an average of \$11.87 per ton.

From 1900 to 1912 the annual exports of scrap varied considerably, the lowest being 4,208 tons in 1911 and the highest 24,109 tons in 1905. During the past six years the exports have greatly increased.

The total imports of scrap-iron and scrap-steel in 1918 are reported as 57,189 tons valued at \$775,526, or an average of \$13.56, as against imports in 1917 of 20,654 tons valued at \$454,079, or an average of \$21.99 per ton, and imports in 1916 of 11,574 tons valued at \$179,751, or an average of \$15.53 per ton.

In 1913 the imports exceeded 100,000 tons and during the preceding 20 years' the imports varied from 8,000 tons to 70,000 tons per annum.

Tabulated records of the exports and imports of scrap-iron and steel were published in the report on production of iron and steel 1916.

\* Includes a few tons of iron rails.

**ROLLING MILL PRODUCTION:**—Statistics of the production of rolled iron and steel products have been received from all firms operating iron and steel rolling mills in Canada. The principal finished rolled products are steel rails, wire rods and merchant bars with an increasing production of structural shapes, plates and sheets. A large tonnage of rolled blooms and billets is used for forging purposes, while during the past two or three years there has been a small export of rolled slabs, blooms and billets.

The total production in 1918 of finished rolled products (including blooms, billets and axle blanks, rolled for forging purposes, and blooms, billets and slabs rolled for export sale) was 1,164,610 short tons, of which 104,328 tons were rolled iron and 1,060,282 tons rolled steel. The total production of rolled products included steel rails 162,747 net tons, wire rods 154,789 tons; merchant bars and rods and structural shapes 425,017 tons; plates and sheets 26,413 tons; rolled blooms and billets for forging purposes and rolled blooms, billets, or slabs sold for export 395,644 tons.

The annual production of rolling mills in so far as the record has been obtained by this Department is as follows:—

## Annual Production of Rolling Mills.

(In short tons.)

Year.	Steel Rails.	Wire Rods.	Bars and Plates.	Other Products.*
1908.....	300,935	41,420		
1909.....	377,642	81,762		
1910.....	399,762	88,456	128,940	28,354
1911.....	399,760	85,811	202,023	62,676
1912.....	471,422	68,174	267,797	36,441

1916.....	90,123	179,226	619,500	152,668
1917.....	46,645	195,392	631,389	87,155
1918.....	162,747	154,789	451,430	(a) 395,644

\* Includes forged products, angle splice bars, and rail fastenings.

(a) Products rolled for forging purposes only and blooms, billets or slabs sold for export. All other rolled iron and steel, except rails and wire rods, included with bars and plates.

The record of production of finished rolled iron and steel in Canada, collected and published by the American Iron and Steel Institute and the American Iron and Steel Association, which covers a longer period of time and is possibly more complete than that given above, is shown in the following tables quoted from the Annual Statistical Report of the American Iron and Steel Institute for 1918.

**STEEL BILLETS:**—Canadian steel billets were not quoted on the Montreal market during 1918. In Pittsburgh the fixed price of \$47.50 continued until November. December average was \$2 per ton less.

\*As compiled and published by *The Iron Age*, New York.

The exports of steel in the form of "billets, blooms and ingots" were in 1918, 61,782 tons valued at \$2,645,943, or an average of \$42.83 per ton, as against exports during the nine months ending December 1917, of 41,558 tons valued at \$1,831,917, or an average of \$44.08 per ton.

There has been a considerable annual importation, as shown in the accompanying tables, of iron and steel billets, and of iron and steel ingots, blooms, slabs, puddled bars, etc. The export records of the United States appear to show considerably larger exports of these products to Canada than is included in the Canadian record, a difference which may be due to the inclusion in the Canadian record, under a general item, of considerable quantities of material, free of duty, for the use of the Imperial Government.

According to the United States record<sup>1</sup>, there was exported from that country to Canada during the calendar year 1918, billets, ingots and blooms of steel, 247,332 gross tons (277,012 short tons) valued at \$19,787,779, or an average of \$80 per gross ton. In 1917 the corresponding exports to Canada were 150,533 gross tons (168,597 short tons) valued at \$11,962,280, or an average of \$70.95, per short ton and in 1916, 105,260 gross tons (117,891 short tons) valued at \$6,657,538, or an average of \$56.43 per short ton.

<sup>1</sup>Monthly Summary of Foreign Commerce of the United States, Department of Commerce, Washington, D.C.

## Imports of Iron and Steel Ingots, Blooms, Billets, etc.

Fiscal Year.	Iron and steel billets weighing not less than 60 pounds per lineal yard.			Iron or steel ingots, cogged ingots, blooms, slabs, puddled bars and loops, or other forms, n.o.p., less finished than iron or steel bars, but more ad- vanced than pig-iron, except castings.			Steel billets, n.o.p.			Total.

\*Import record not complete. See explanation in text.

The second table following shows for a number of years the exports of billets, ingots and blooms of steel from the United States to Canada. The principal difference between this and the Canadian record appears to be for the years 1916, 1917, and 1918. There is also shown in this table a record of the exports from the United States to Canada of steel rails, sheets and plates, structural iron and steel, tin plate, etc., wire and manufactures of wire, pipe and fittings and metal working machinery.

**STEEL RAILS:**—The production of steel rails in Canada during 1918 was 162,747 short tons, as against 46,645 short tons in 1917 and 90,123 short tons in 1916. The annual production from 1905 to 1915 varied between 200,000 tons and 560,000 tons per annum.

The exports of steel rails during 1918 were 12,952 tons valued at \$575,062, or an average of \$44.40 per ton, as against exports during the nine months ending December 1917, of 26,402 tons valued at \$1,605,742, or an average value per ton of \$60.82. The imports of steel rails as per Canadian Customs records were 7,787 tons valued at \$404,417, or an average of \$51.93 per ton, as against imports in 1917 of 18,160 tons valued at \$689,197, or an average of \$37.95 per ton. United States trade records show exports of steel rails to Canada during 1918 of 74,545 tons valued at \$3,163,301 or an average of \$42.43 per ton and during 1917 exports to Canada of 54,088 tons valued at \$1,815,768, or an average of \$33.57 per ton. (See preceding table.)

The annual imports of steel rails from 1895 to 1905 ranged between 50,000 tons and 212,000 tons averaging about 125,000 tons. From 1906 to date, however, or since the establishment of the rail mills at Sydney and Sault Ste. Marie, the imports have fallen to an annual average of about 60,000 tons, the variation being between a minimum of 10,420 tons in 1915 and a maximum of 177,041 tons in 1913.

**WIRE RODS:**—The production of wire rods in Canadian rolling mills in 1918 was 154,789 tons as compared with 195,392 tons in 1917 and 179,226 tons in 1916. From 1908 to 1914 inclusive the average annual production was about 70,000 tons. The imports of wire rods in the coil in 1918 were 42,838 tons valued at \$2,416,702, or an average of \$56.42 per ton, as compared with imports in 1917 of 55,314 tons valued at \$3,536,504, or an average of \$63.93 per ton. The annual imports have varied between rather wide limits, having been as high as 55,000 tons in 1902 and less than 10,000 tons in 1908 the highest import having been reached during the fiscal year of 1913 with a total of 91,919 tons.

\*As compiled and published by *The Iron Age*, New York.

The average monthly price of wire rods in Pittsburgh was fixed by Government order on October 11th, 1917, at \$57 per gross ton and this price remained in force throughout 1918.

**TIN PLATE:**—There has been as yet no production of tin plate in Canada. The imports during 1918 were 72,844 tons valued at \$11,403,887, or an average of \$156.55 per ton as compared with imports in 1917 of 66,676 tons valued at \$9,985,631; or an average of \$149.76 per ton. The imports during the past ten years have averaged about 42,500 tons per annum.

A development is now in progress which has as its object the establishment of a tin plate manufacturing industry in Canada. The electric steel furnace plant and buildings of the British Forgings, Ltd., at Toronto have been purchased by Baldwins Canadian Steel Corporation, Ltd., which firm has under construction a mill for the manufacture of steel sheets to include black sheets, galvanized sheets and tin plate. It is anticipated that this plant may be ready for operation toward the middle of 1920.

### Exports and Imports of Iron and Steel Goods.

Canada imports large quantities of iron and steel, much larger quantities than are manufactured in domestic steel mills. Reference has already been made to exports and imports of a few specific products; the following, however, is a general summary of the available records relating to exports and imports of iron and steel as compiled from the reports of the Customs Department. Mention has already been made of the fact that some of these records such as imports of billets, steel rails, and pig-iron, are apparently incomplete. It is assumed that considerable quantities of these products have been imported by and for the use of the Imperial Government as munitions of war and entered under a special item of the Custom classification to cover such imports instead of under the usual classification. This fact should be kept in mind in analysing the situation, since it may explain a number of apparent discrepancies between these records and those available from other sources, such, for instance, as the United States Department of Commerce records of Foreign Trade.

The exports of iron and steel from Canada have consisted chiefly of manufactured goods, such as agricultural implements, automobiles, bicycles, machinery, etc. During the past two years, however, there have been considerable exports of steel rails, billets, rods and wire products.

The total recorded value of iron and steel exported during the calendar year 1918, was \$54,764,742, as compared with a value of exports in 1917 of \$46,791,681.

The exports in 1918 included: pig-iron and ferro-alloys, 25,911 tons valued at \$2,840,929; scrap-iron and steel, 51,545 tons valued at \$853,097; wire and wire nails valued at \$6,294,195; billets, bars, rods and rails, 180,019 tons valued at \$13,533,662; agricultural implements valued at \$5,684,770; automobiles and bicycles, \$6,092,572; other manufactures of iron and steel, \$19,465,517.

The exports during 1917 included: pig-iron and ferro-alloys, 45,293 tons valued at \$3,040,738; scrap-iron and steel, 176,591 tons valued at \$2,300,022; wire and wire nails, 105,482 tons valued at \$9,823,700; billets, bars, rods and rails during the last nine months of the year, 109,281 tons valued at \$7,071,446;

agricultural implements valued at \$5,430,906; automobiles and bicycles, \$6,711,888; other manufactures of iron and steel, \$12,412,981.

The exports during 1916 included: pig-iron and ferro-alloys, 46,106 tons valued at \$1,726,396; scrap-iron and steel, 114,300 tons valued at \$1,357,018; wire and wire nails, 122,526 tons valued at \$8,597,320; agricultural implements valued at \$3,740,494; automobiles and bicycles, \$6,807,499; other manufactures of iron and steel, \$729,831.

**Annual Exports of Iron and Steel Products since 1909.**

Calendar Year.	Value.	Calendar Year.	Value.	Calendar Year.	Value.
1909*.....	\$ 7,172,413	1913.....	\$13,999,149	1917.....	\$ 46,791,681
1910.....	7,895,489	1914.....	14,391,746	1918.....	54,764,742
1911.....	9,907,281	1915.....	48,268,148		
1912.....	10,682,484	1916.....	63,958,558		

\*Agricultural implements, automobiles and bicycles included in 1909 and subsequent years.

Separate records covering a period of years, of the annual exports of pig-iron and ferro-alloys and of scrap iron and steel have already been given on previous pages.

The total value of the imports of iron and steel goods during the calendar year 1918, subject to the explanation already made in respect to certain products not recorded under the usual and regular classification and therefore omitted from this record was \$169,538,669; as compared with a value of \$187,191,534 imported during the calendar year 1917, and \$129,090,241 imported during the calendar year 1916.

Between 1895 and 1904 the imports of iron and steel increased from about \$8,600,000 to over \$40,000,000. During the next five years there was comparatively little change, but from 1909 to 1913 the increase was again very rapid. During the latter part of 1913 there was, however, a distinct check to imports with the heavy falling off shown in 1914 and 1915. These imports include all classes of manufactured iron and steel goods as well as those of cruder form. In many cases the values only of the imported goods are given, so that a total tonnage of imports cannot be stated. In the case of most of the cruder materials, however, the quantities are given and a compilation of these showing the importation of the cruder forms of iron and steel since 1909 is shown in the accompanying tables.

Thus, during the twelve months ending December 31, 1918, there were imported 786,097 tons of iron and steel valued at \$70,493,861 or an average of \$89.68 per ton, together with other iron and steel goods the quantities of which are not stated, valued at \$99,044,808.

During the twelve months ending December 31, 1917, there were imported 929,776 tons of iron and steel valued at \$84,448,580, or an average of \$90.83 per ton, together with other iron and steel goods, the quantities of which are not stated, valued at \$102,742,954.

During the twelve months ending December 31, 1916, there were imported 864,916 tons of iron and steel valued at \$52,114,258, or an average of \$60.25 per ton, together with other iron and steel goods of which the quantities are not stated, valued at \$76,975,990.

### Summary of Imports of Iron and Steel, 1917 and 1918.

Material.	1917.			1918.		
	Tons.	Value.	Average.	Tons.	Value.	Average.
Pig-iron and kentledge.....	83,416	\$ 2,764,165	\$ 33.14	67,397	\$ 2,102,435	\$ 31.19

Total.....	(b)929,776	\$4,448,580	90.83	(c)786,097	70,493,861	89.68
Other iron and steel products valued at.....		102,742,954			99,044,808	
Total value of imports of iron and steel.....		\$187,191,534			\$169,538,669	

(a) There are additional imports of pipe and wire included under "other iron and steel products."

(b) This figure should be increased by nearly 150,000 tons and the value in proportion, because of the imports of steel billets entered under a general classification. See explanation under steel billets, page No.

(c) For the same reason as indicated under note (b) this item should perhaps be increased by about 277,000 tons and a value over \$19,000,000.

## Summary of Tonnage of Iron and Steel Imported during Calendar Years 1913-1917.

(In short tons.)
