CANADA

DEPARTMENT OF MINES

HON. SIR JAMES A. LOUGHEED, MINISTER; CHARLES CAMSELL, ACTING DEPUTY MINISTER.

MINES BRANCH

EUGENE HAANEL, PH.D., DIRECTOR.

ANNUAL REPORT

ON THE

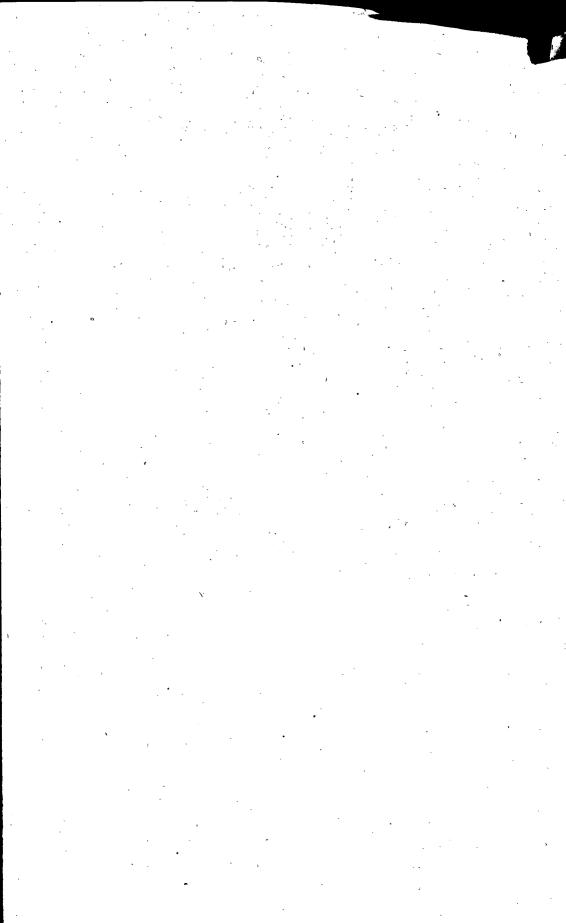

MINERAL PRODUCTION OF CANADA

During the Calendar Year

1919

OTTAWA
THOMAS MULVEY
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1920

LETTER OF TRANSMITTAL.

Dr. Lugene Hannel,
Director of Mines Branch,
Department of Mines,
Ottawa.

SIR,—I beg to hand you, herewith, in abbreviated form the Annual Report on the Mineral Production of Canada, giving revised statistical information descriptive of the mining and metallurgical production in Canada during the calendar year 1919.

A preliminary report on the mineral production during 1919 was sent to press February 28, 1920, and issued within the following week.

The present report, as did the corresponding issue for 1918, presents a general summary only of the mineral production and will be supplemented by separate and detailed reports on "The Production of Coal and Coke in Canada, 1919"; "The Production of Iron and Steel in Canada, 1919"; and "The Production of Copper, Gold, Lead, Nickel, Silver, Zinc and other Metals in Canada during 1919."

That section of this report dealing with metals and metalliferous ores, except iron and steel, has been prepared by Mr. A. Buisson; and the entire section dealing with non-metalliferous products, including structural materials, has been prepared by Mr. John Casey.

The co-operation of Canadian mine and smelter operators who have, almost without exception, cheerfully furnished the department with statistics and information regarding their operations is gratefully acknowledged. Thanks are due also to railway and other transportation companies and to smelter operators outside of Canada for data furnished.

(Signed) JOHN McLEISH.

Division of Mineral Resources and Statistics, November 12, 1920. . ર્

EXPLANATORY NOTES.

The term "ton" used throughout this report signifies a ton of 2,000 pounds; while the year referred to means calendar year, unless otherwise stated. The Government fiscal year formerly ended on the 30th June; but now terminates on the 31st March. This change took place in 1907, hence the fiscal period ending March 31, 1907, covers only nine months.

Statistics of exports and imports given throughout this report are compiled from the reports of the Trade of Canada, collected by the Customs Department and published by the Department of Trade and Commerce.

The term "production" used throughout this report may in general be interpreted as meaning the quantity sold or shipped. Mineral products mined or manufactured, but not sold or shipped at the end of the year, are not included as "production." An exception to this usage will be found in reference to pig-iron, in which case the statistics of production represent the quantities made.

The value of the metallic minerals produced, whether refined in Canada or not, is calculated on the basis of the average price of the metal in some recognized market. New York prices have usually been taken as the standard, except in the case of lead, for which the Montreal price is now used. The value of non-metallic products is given as at the mine or point of shipment.

THE

MINERAL PRODUCTION OF CANADA

During the Calendar Year

1919

A preliminary report on the mineral production of Canada in 1919 was published on February 28, 1920, the statistical record being at that time partially estimated and therefore subject to revision.

According to the revised statement now presented the total value¹ in 1919 was \$176,686,390, about three and a half million dollars in excess of the total value estimated in the preliminary report.

Compared with the total value of the production in 1918, which was \$211,301,897, that of 1919 shows a decrease of 16.38 per cent.

The detailed comparative statement here presented shows the production of each important product during the past two years, the proportion which each contributes of the total production, and the increase or decrease as the case may be of the production in 1919 as compared with that of 1918.

The total value of the metallic production in 1919 was \$73,262,793, as against a value of \$114,549,152 in 1918 and \$106,465,147 in 1917, showing a decrease of \$41,286,359 or over 36 per cent in 1919 as compared with the previous year.

The total value of the production of non-metallic products in 1919 was \$103,423,597, as against \$96,752,745 in 1918 and \$83,191,674 in 1917. The value of non-metallic products in 1919 was greater than that of any previous year. Much of this increase is to be credited to higher prices realized for most of these products though on the other hand important increases have been made in the quantities of products produced including asbestos and the various classes of structural material.

The total value of the production in 1886 was \$10,221,255, or about \$2.23 per capita. In ten years the value had increased to \$22,474,256, or \$4.38 per capita, more than twice the total in 1886, and nearly twice the production per capita. The next ten years witnessed an increase to \$79,286,697 in 1906, or \$12.81 per capita, about three and a half times the production in 1896. The total in 1919 was more than double that of 1906.

The record of annual mineral production in Canada since 1886 and the total annual production of metallic and non-metallic products since 1907 are shown in the following tables:—

In presenting a total valuation of the mineral production as is here given, it should be explained that the production of the metals, copper, gold, lead, silver, and zinc, is given as far as possible on the basis of the quantities of metals recovered in smelters, and the total quantities in each case are valued at the average market price of the refined metal in a recognized market. There is thus included, in some cases, the values that have accrued in the smelting or refining of metals outside of Canada.

Annual Mineral Production in Canada since 1886.

(a) Total includes \$300,000 allowed for products not reported.

The production of pig-iron given in the general table includes only that proportion of the output of Canadian blast furnaces credited to Canadian ores. There is an important production of pig-iron from imported ores (shown in the footnotes to the general table and in the chapter on iron and steel) and the total value thereof in 1918 was exceeded only by the production of coal and nickel. There is also a large production of aluminium from imported ores for which no value is included, in the general table of production.

*Short tons throughout. (a) The metals, copper, lead, nickel, silver and zinc as also cobalt oxides are for statistical and comparative purposes valued at the final average value of the refined metal. Pig-iron is valued at the furnace or spot, and non-metallic products at the mine or point of shipment. (b) Copper content of smelter products and estimated recoveries from ores exported, at 18-691 cents per pound in 1919, and 24-628 cents per pound in 1918. (c) The total production of blast furnace pig-iron in Canada in 1919 was 910,080 tons valued at \$24,245,792, of which, it is estimated, 871,623 tons valued at \$23,346,386 should be credited to imported ores; in 1918 the total production was 1,163,520 tons valued at \$31,776,257 of which 1,116,076 tons valued at \$30,571,554 are credited to imported ores; (d) Pig-lead produced in Canada and estimated recoveries from lead ores exported at 6-966 cents per pound in 1919, and 9-250 cents in 1918, the average prices in Montreal. (e) Nickel content of matte produced and nickel recovered from silver cobalt-nickel ores valued at 40 cents in 1919 and 1918. (f) Silver recovered in bullion and recoverable from ores and smelter products exported at 111-122 cents per ounce in 1919 and at 90-772 cents in 1918. (g) Gross returns of sale of gas as furnished by well operators. (k) Sold for export as reported by the mine operators. (p) This record includes only the reported recovery of platinum from alluvial deposits. Important quantities of platinum are being recovered, chiefly in refineries outside of Canada, from the nickel-copper mattes of the Sudbury district. Only a partial record of this recovery is available.

The record of production of cobalt for the year 1918 as given in this table has been revised because of duplication caused by the inclusion of material retreated. The corrected production is 737,157 pounds, valued at \$1,842,893. The decrease in production will thereby be corrected to 236,786 pounds or 28.0 per cent; and the decrease in value to \$516.965 or 28.0 per cent.

EXPORTS AND IMPORTS.

A very large portion of the mineral production of Canada is exported for consumption or refining outside of Canada. On the other hand considerable quantities of mine products, chiefly those which have been refined or subject to partial treatment, or in the form of manufactured goods ready for consumption, are imported.

The total value of the exports of products of the mine, including direct mine products and manufactures thereof, in 1919 was \$182,698,777, compared with \$174,558,546 in 1918, according to records compiled from the Monthly Reports of the Trade of Canada published by the Department of Trade and Commerce. The classification is that used in the Trade reports.

A revision of the classification makes comparison in detail with previous records difficult. Of the total exports in 1919, about \$58,000,000 can be attributed to metals either in crude or refined metallic form or contained in ores or some form of metallurgical product exported for further refining. About \$26,000,000 is attributed to asbestos, coal, mica, and various other non-metallic minerals. About \$10,000,000 is attributed to chemical products such as cyanamid, calcium carbide, ammonium sulphate, etc. The balance, over \$88,000,000, is made up largely of manufactured products, chiefly manufactures of iron and steel, such as agricultural implements, machinery, boilers and locomotives, rolling-mill products, wire, etc.

A great variety of mineral products, chiefly in the manufactured or semi-manufactured condition, are annually imported into Canada. These imports increased in value with great rapidity during the ten years preceding 1913. During the next two years, however, there was a falling off, but in 1916 the imports again increased to a value almost equal to that of 1913. The total value of these imports during the calendar year 1919 amounted to \$324,263,177, as compared with a value of \$356,990,627 in 1918; \$354,313,551 in 1917; \$256,346,726 in 1916; \$146,465,510 in 1915; \$181,675,667 in 1914; and \$259,299,745 in 1913.

It is perhaps significant that of the total value of these imports in 1919 over one-half consisted of iron and steel goods and about 29 per cent of coal, coke and petroleum.

PRODUCTION BY PROVINCES.

Summaries of the mineral production by provinces in 1918 and 1919 are shown in the accompanying tables. The first shows the total production in the several provinces and the percentages of each for the past three years.

In comparing the relative production of the various provinces it should be remembered that Nova Scotia is not credited with the large production of pig-iron and steel at Sydney and Sydney Mines, which is made almost entirely from imported iron ores and is not naturally credited as Canadian mine product. Similarly a large proportion of the pig-iron production in Ontario is excluded from the total value, because it is derived from imported ores. The province of Quebec, also, is not credited with the production of aluminium at Shawinigan Falls, which is made from imported bauxite.

Mineral Production by Provinces, 1917, 1918, and 1919.

^{*}Includes a small production from Prince Edward Island.

MINE PRODUCTION.

The statistics of mineral production presented in the preceding tables are based, as already explained, in so far as metalliferous ores are concerned, on the actual or probable recovery of refined metals from the ores treated. An endeavour has been made to compile another series of records eliminating as far as possible the metallurgical operations, and to include only the actual quantities of ores or concentrates shipped from mines and the net value of the same. It has not been found feasible, however, to eliminate entirely the metallurgical operations in certain eases, such as the recovery of bullion in placer operations, the recovery of gold bullion from milling ores and of silver bullion by those plants carrying on milling operations as well as mining, there being no commercial basis on which a separation of values could be made.

A record of mine production compiled on this basis is shown in the following tables and includes a record of the tonnage and value of ores, or minerals mined, treated and shipped, the quantities of metals contained in ores shipped and records of labour employed and wages paid. It should be noted that these records cover only active shipping mines and do not include any record of the labour employed in the smelting and refining of ores, nor in blast furnace operations, with the exceptions noted. Previous to 1917 no record was obtained of the labour employed in connection with the production of petroleum, and similar returns in respect to placer mining were not sufficiently complete to be included in the tables. The values of the ores given are in general those furnished by the operators. In certain cases, however, where such values have not been furnished, estimates have been made.

The tables showing the quantities of metals contained in the ores shipped give the total quantities of metals contained without any deductions or allowances being made for smelter or treatment losses.

METALLIC PRODUCTS.

ALUMINIUM.

No commercial ores of aluminium have as yet been found in Canada. Aluminium is, however, made in extensive works at Shawinigan Falls, Quebec, from imported ores by the Northern Aluminium Company.

The imports of alumina including bauxite, were in 1919, 29,302 tons, valued at

\$1,565,264, as against 93,221 tons, valued at \$2,071,060, in 1918.

The imports of aluminium in ingots, bars, tubes, etc., were in 1919, 379.5 tons, valued at \$247,565, besides manufactures of aluminium valued at \$347,129, as against 143.5 tons, valued at \$109,411, besides manufactures of aluminium valued at \$274,574, in 1918.

The exports of aluminium in ingots, bars, tubes, etc., in 1919 amounted to 7,288 tons, valued at \$4,455,031, together with manufactures of aluminium valued at \$59,339, as against 10,808 tons, valued at \$7,223,570, and manufactures valued at \$197,670, in 1918.

The restrictions on the price of aluminium were raised by the United States War Industries Board in February, 1919, but there was very little fluctuation throughout the year, the average being 32.14 cents per pound.

ANTIMONY.

Shipments of antimony ore and concentrates and of refined antimony were made intermittently during the last ten years. There has been no reported shipment of antimony in any form during the last two years.

The imports of antimony as regulus, salts, etc., were in 1919, 520.9 tons, valued

at \$89,805, as against 341.9 tons, valued at \$111,664, in 1918.

The Customs Department records show an export of antimony ore in 1919, amounting to 56 tons, valued at \$8,420, as against 26 tons, valued at \$1,430, in 1918.

The New York price of antimony averaged in 1919, 8-19 cents per pound. Due to an abundant supply early in the year, the price declined to a minimum of $6\frac{1}{2}$ cents in April, then strengthened and rose to 9 cents in July and closed the year at $9\frac{1}{2}$ cents per pound.

COBALT.

The Cobalt district of Ontario has been for several years the principal source of the world's supply of cobalt. The recovery of cobalt in Canada is in the form of metallic cobalt, cobalt oxide, cobalt salts, unseparated oxides and stellite, which are produced from the treatment of the cobalt ores and residues in eastern Ontario smelters.

The total production of cobalt contained in smelter products shipped and in cobalt residues exported during 1919 amounted to 530,371 pounds (265.2 tons) valued at \$1,325,928 (\$2.50 per pound), as against 737,157 pounds (368.6 tons), valued at \$1,842,893 (\$2.50 per pound), in 1918.

The 1919 production included: (a) 113,943 pounds of metallic cobalt, valued by the producers at \$220,676; (b) 429,359 pounds of cobalt oxides, valued at \$611,909; (c) other cobalt compounds such as stellite and cobalt sulphate amounting to 60,437 pounds, valued at \$34,308; and (d) cobalt ores and residues exported amounting to \$42 tons, valued at \$133,294; making a total valuation by the producers of \$900,187.

The 1918 production included: (a) 294,476 pounds of metallic cobalt, valued by the operators at \$713,072; (b) 476,053 pounds of cobalt oxides, valued at \$760,121; and (c) other cobalt compounds such as stellite and cobalt hydroxide amounting to 191,304 pounds, valued at \$936,139; making a total valuation of \$2,409,332.

The total cobalt ores and residues treated in 1919 were 9,084 tons with a cobalt content of 1,070,826 pounds, as against 8,354 tons with a cobalt content of 972,679 pounds in 1918.

No price quotations for cobalt are available for 1918 and 1919, but the metal as produced in the refineries of Ontario obtained a price of around \$2.50 per pound.

⁽b) The record of cobalt production for 1918 as published in the Annual Report for that year have been revised because of duplication caused by the inclusion of materials re-treated.

COPPER.

The total production of copper in 1919 amounted to 37,526.8 tons, valued at \$14,028,265, as against 59,384.7 tons, valued at \$29,250,536 in 1918.

The production in 1919 included: 3,467 tons of refined copper; 11,583.5 tons contained in blister copper exported for refining; 12,098.7 tons contained in nickel-copper matte partly exported and partly refined in Canada; 20.7 tons contained in copper sulphate; and 10,356.8 tons, the estimated recoveries from ores exported for smelting and refining.

The 1918 production included: 3,808·7 tons of refined copper, 18,848·3 tons contained in blister copper; 23,482·3 tons contained in nickel-copper matte exported for refining; 22·1 tons contained in copper sulphate; and 13,223·2 tons, the estimated recoveries from ores exported for smelting and refining.

Refined copper was produced in Canada commercially for the first time in 1916

at the Trail refinery of the Consolidated Mining and Smelting Company.

British Columbia contributed 59.3 per cent of the total production for Canada in 1919, while Ontario produced 32.5 per cent, Quebec 3.6 per cent, Manitoba 4.4 per cent, and the Yukon 0.2 per cent.

The imports of copper in 1919 were valued at \$3,599,297 and included: crude and manufactured copper, 7,474.7 tons, valued at \$3,074,368; copper sulphate, 937.4 tons, valued at \$150,388; and manufactures of copper valued at \$374,541.

The imports in 1918 were valued at \$6,373,361 and included: crude and manufactured copper, 11,162 tons, valued at \$5,879,007; copper sulphate, 1,375.7 tons, valued at \$240,775; and manufactures of copper valued at \$253,579.

The imports of brass in 1919 were valued at \$3,964,339 and included: brass in crude and manufactured form 1,653.8 tons, valued at \$697,996 and containing approximately 1,157.6 tons of copper, and also manufactures of brass valued at \$3,266,343.

The imports of brass in 1918 were valued at \$4,647,872 and included: 1,994 3 tons of brass in crude and manufactured form, valued at \$993,574, and containing 1,396 tons of copper; and manufactures of brass valued at \$3,654,298.

The exports of copper in 1919 were valued at \$14,654,640 and included: copper in ore, matte, etc., 20,425.7 tons, valued at \$5,316,151; blister copper 9,978 tons, valued at \$3,747,355; copper, black or coarse, and in pigs, etc., 9,096.1 tons, valued at \$4,186,549; copper "old and scrap," 1,558.5 tons, valued at \$537,225; and copper wire and cable valued at \$867,360.

The exports of copper in 1918 were valued at \$20,772,109 and included: copper in ore, matte, etc., 36,698·2 tons, valued at \$9,221,681; copper, black or coarse, and in pigs, etc., 23,390·3 tons, valued at \$11,378,440; and "old and scrap," 447·7 tons, valued at \$171,988.

The price of copper fluctuated very much during 1919, but there was no real active market until towards the end of the year which closed with copper at 18½ cents per pound.

Summary of Copper Statistics.

⁽a) Does not include the nickel-copper ores. See nickel.

⁽b) Includes manufactures of copper for which no quantities are given; in 1916, \$234,421; in 1917, \$316,190; in 1918, \$253,579, and in 1919, \$374,541.
(c) Includes in 1917 small quantities from New Brunswick and Alberta.

GOLD.

The production of gold in 1919 amounted to 766,764 fine ounces, valued at \$15,850,423, and included: (a) alluvial gold, 104,495 ounces, or 13.6 per cent of the total; (b) gold obtained from the crushing of free-milling quartz ore, 529,296 ounces, or 69.1 per cent; (c) gold obtained from ores treated at the Canadian copper and lead smelters, 67,636 ounces, or 8.8 per cent; and (d) the estimated gold recoveries from ores exported, 65,337 ounces, or 8.5 per cent of the total production.

The production in 1918 amounted to 699,681 fine ounces, valued at \$14,463,689, and included: (a) alluvial gold, 16·7 per cent of the total; (b) gold from free-milling quartz, 63·1 per cent; (c) gold recovered in Canadian smelters, 12·1 per cent; and (d) the estimated recoveries from ores exported, 8·1 per cent.

There are two refineries producing fine gold in Canada, that of the Royal Mint at Ottawa, and that of the Consolidated Mining and Smelting Company of Canada, at Trail, B.C.

The production of gold by provinces is as follows: Nova Scotia, 0.1 per cent of the total; Quebec, 0.2 per cent; Ontario, 05.9 per cent; Manitoba, 0.1 per cent; British Columbia, 21.8 per cent, and the Yukon, 11.9 per cent.

The imports of gold in the form of fringe, and manufactures of gold and silver, were valued in 1919 at \$477,412. The Customs Department does not report any imports of gold bullion or gold coin after March 31, 1918. The imports in 1918 of gold in the form of bullion, coins, fringe and manufactures of gold and silver were valued at \$1,831,795.

The exports of gold in the form of dust, nuggets, etc., in 1919, were valued at \$5,037,123, as against \$10,040,813 in 1918. Much of the bullion formerly exported was marketed at the Royal Mint during 1919.

⁽a) Includes gold from copper ores and lead-zinc ores.

IRON AND STEEL.

Iron Ore.—The shipments of iron ore from Canadian mines were in 1919 the lowest that have been recorded in nineteen years and amounted to a total of 197,170 tons, valued at \$693,386, as compared with 211,608 tons, valued at \$885,893, shipped in 1918. The shipments in 1919 included 321 tons of titaniferous ore mined some years previously at Baie St. Paul, on the north shore of the St. Lawrence, several carloads from properties in Palmerston township, Frontenac county, and Bastard

township, Leeds county, Ontario; 1,200 tons of magnetite shipped from Dean channel, B.C., to Seattle, Wash., and the balance from the Moose Mountain magnetite mines and the Magpie siderite mine.

The Magpie siderite mine in the Michipicoten district of Ontario was operated throughout the year by the Algoma Steel Corporation, the siderite ore being roasted as usual in the rotary kiln plant at the mine. About 189,962 tons of roasted ore were produced and shipped to the blast furnace plant at Sault Ste. Marie. The raw ore averages about 34.3 per cent and the roasted ore about 50 per cent metallic iron.

Messrs. Moose Mountain, Limited, operating at Sellwood, Ont., were actively engaged throughout the year in the development of the milling and briquetting processes which are being employed in the treatment of these low grade magnetites. The raw ore averaged about 33.8 per cent iron, while the briquettes produced averaged about 63.8 per cent iron. Over 100,000 tons of raw ore were milled during the year, but only a comparatively small quantity, 5,483 short tons, of briquettes were marketed.

About 25 tons of magnetite were shipped by the British Columbia Department of Mines to Vancouver for an experiment in electric smelting by the Fleet process. In Bella Coola district several iron claims have been staked on Dean Channel by Filip Jacobson. About 1,200 tons were mined and shipped by the Smelters Steel Company of Seattle to an electric furnace plant which the company has erected near that point.

In the Great Lakes region ore prices from the 1st October, 1918, were: Old Range Bessemer, \$6.65 per gross ton (basis 55 per cent iron); Messabi Bessemer, \$6.40; Old Range Non-Bessemer, \$5.90 (basis 51.5 per cent iron); Messabi Non-Bessemer, \$5.75. From April 28, 1919, these prices were reduced by 20 cents per ton.

Of the total shipments in 1919 mine operators reported 7,083 tons as exported to the United States, and 190,087 tons shipped to Canadian blast furnaces. The Customs Department records show exports of iron ores to the United States during the year of 14,480 tons, valued at \$78,490, and imports of iron ore amounting to 1,783,098 tons, valued at \$4,706,440.

The quantity of iron ore charged to blast furnaces in 1919 was 1,752,585 tons, of which 78,391 tons were of domestic origin and 1,674,194 tons imported. The imported ore included 519,722 tons of Newfoundland ore and 1,154,472 tons of "Lake ore." Shipments of iron ore from Wabana Mines, Newfoundland, in 1919 by the two Canadian companies operating there were 499,972 short tons, as against 848,574 tons in 1918, all of which went to Sydney and North Sydney, in Cape Breton.

Pig-iron.—The total production of pig-iron in Canada in 1919, excluding the production of ferro-alloys, was 917,781 short tons (819,447 gross tons), having a value of \$24,577,589, as compared with a total production in 1918 of 1,195,551 short tons (1,067,456 gross tons), valued at \$33,495,171, showing a falling off of 277,770 tons, or 23 per cent. Of the 1919 total, 910,080 tons were made in blast furnaces and 7,701 tons were made in electric furnaces from scrap metal, chiefly shell turnings. In 1918 the blast furnace production was 1,163,510 tons and the electric furnace production from scrap steel was 32,031 tons.

The production of blast furnace pig-iron in Nova Scotia in 1919 was 285,087 tons, as against 415,870 tons in 1919, and with the exception of 1914 was the smallest production in that province since 1905. In Ontario the production of blast furnace pig-iron was 624,993 tons, as against 747,650 tons in 1918. Although less by 16 per cent than in the previous year, the 1919 production in Ontario was exceeded in only four previous years.

Less than one-quarter as much pig-iron was made from electric furnaces from scrap steel as in the previous year, the output being derived from six furnace plants in 1919 as compared with ten plants operated in 1918.

By grades the 1919 production included: Basic, 580,426 tons; Bessemer, 7,637 tons; foundry and malleable, etc., 322,017 tons; low phosphorus iron (electric furnace), 7,701 tons. The 1918 production included: Basic, 966,409 tons; Bessemer, 15,415 tons; foundry and malleable, etc., 181,696 tons; low phosphorus iron (electric furnace), 32,031 tons.

The blast furnace plants operated included those of the Dominion Iron and Steel Company at Sydney, N.S.; the Nova Scotia Steel and Coal Company at North Sydney; the Standard Iron Company at Deseronto, Ont.; the Steel Company of Canada at Hamilton, Ont.; the Canadian Furnace Company at Port Colborne, Ont.; the Algoma Steel Corporation, Limited, at Sault Ste. Marie, Ont.; the Midland Iron and Steel Company at Midland, Ont.; and the Parry Sound Iron Company, Limited, at Parry Sound, Ont.

Electric furnaces were operated for the production of pig-iron from scrap at Hull and Shawinigan Falls in Quebec, at Collingwood, Belleville and Welland in Ontario, and at Vancouver, British Columbia.

The production of ferro-alloys in Canada in 1919, including ferro-silicon, silico spiegel, spiegeleisen and ferro-phosphorus, all with the exception of the spiegeleisen being made in electric furnaces, was about 48,601 tons, valued at \$2,000,809. In 1918 the production was 44,704 tons, valued at \$4,731,521. Over one-half the tonnage made in 1919 was spiegeleisen made by the Algoma Steel Corporation for the company's own use.

The exports of pig-iron during 1919 were 63,605 tons, valued at \$1,820,260, or an average of \$28.62 per ton, and of ferro-alloys 22,449 tons, valued at \$1,229,341, or an average of \$54.76 per ton. The exports of pig-iron included 57,845 tons to the United States, 783 tons to Chili, 7 tons to Japan, and 4,970 tons to other countries. The ferro-alloys exports included 2,564 tons to United Kingdom, 15,371 tons to the United States, and 4,514 tons to other countries.

The imports during 1919 included 35,800 tons of pig-iron, valued at \$1,022,871, or an average of \$28.80 per ton, and 16,222 tons of ferro-alloys, valued at \$901,678, or an average of \$55.58 per ton, making a total import of pig-iron and ferro-alloys of 52,022 tons, valued at \$1,924,549. The United States trade records show exports to Canada during 1919 of pig-iron and ferro-alloys amounting to 33,751 gross tons (37,801 short tons), valued at \$1,052,103.

Steel.—The total production of steel ingots and direct steel castings in 1919 was 1,030,342 short tons (919,948 long tons), of which 993,039 tons were ingots and 37,303 tons direct steel castings.

The total production in 1918 was 1,873,708 short tons (1,672,946 long tons), of which 1,800,171 tons were ingots and 73,537 tons were castings.

The 1919 production included: open-hearth steel, 1,007,495 tons; electric steel, 15,502 tons; crucible and converter steels, 7,345 tons. The 1918 production included: open-hearth steel, 1,746,334 tons; electric steel, 119,130 tons; crucible and converter steels, 8,244 tons.

The total production of electric furnace steel in 1917 was 50,467 tons and in 1916, 19,639 tons.

The total production of pig-iron, ferro-alloys and steel in electric furnaces was about 41,683 tons in 1919, as compared with 191,869 tons in 1918, and 101,031 tons in 1917.

The exports of steel during 1919, as per Customs Department records, included billets, blooms and ingots, 28,087 tons, valued at \$1,731,529, or an average of \$61.65 per ton; bars and rods, 52,191 tons, valued at \$3,394,894, or an average of 65.05 per ton; steel rails, 30,737 tons, valued at \$1,297,836, or an average of \$42.22 per ton; whe and wire nails valued at \$5,745,773; structural steel, 5,515 tons, valued at \$465,989, or an average of \$84.49 per ton; scrap iron and steel, 245,214 tons, valued at \$3,779,179,

or an average of \$15.41 per ton, together with a large quantity of manufactured iron and steel goods.

The production of rolled iron and steel products in 1919 (including blooms, billets and axle blanks rolled for forging purposes, and blooms, billets and slabs rolled for export sale) was 804,407 tons, of which 62,136 tons were rolled iron and 742,271 tons rolled steel. The total production of rolled products included: steel rails, 316,304 short tons; plates and sheets, 25,408 short tons; wire rods, 153,723 short tons; merchant bars and structural shapes, 205,643 short tons; rolled blooms and billets for forging purposes and rolled blooms, billets or slabs sold for export, 25,090 tons. The total production in 1918 of finished rolled products was 1,146,610 short tons, which included steel rails, 162,747 tons; wire rods, 154,789 tons; merchant bars and rods and structural shapes, 415,017 tons; plates and sheets, 26,413 tons; rolled blooms and billets for forging purposes and rolled blooms, billets, or slabs sold for export, 395,644 tons.

LEAD.

The production of lead in 1919 amounted to 21,914 tons, valued at \$3,053,037, as compared with a production of 25,699 tons, valued at \$4,754,315, in 1918, and is mainly derived from the lead-zinc mines of British Columbia.

The production in 1919 included: (a) 17,165.5 tons of refined lead produced at Trail, B.C., and pig-lead produced at Galetta, Ont., from Canadian ores; (b) 4,724 tons the estimated recovery from lead ores exported to the United States; and (c) 24.3 tons the estimated recoveries from the gold and silver ores of Ontario exported to the United States.

The 1918 production included: (a) 16,391 tons of lead in bullion produced at the smelters at Trail, B.C., and the pig-lead produced at Galetta, Ont., from Canadian ores; (b) 9,298 tons the estimated recovery from lead ores exported; and (c) 10 tons the estimated recovery from the gold and silver ores of Ontario, also exported to the United States.

The total shipments of lead ore and concentrates as reported by the operators were in 1919, 54,508 tons valued at \$3,044,839, and containing 16,074 tons of lead, as against 75,256 tons valued at \$4,705,573, and containing 23,422 tons of lead in 1918.

The total refined lead produced in Canada, including that produced from foreign ores and the pig-lead produced in Ontario smelters, amounted in 1919 to 17,165 tons, as against 15,786 tons in 1918.

The imports of lead, including the lead in pigments, salts, etc., in 1919 were 7,044 tons, valued at \$883,536, with also manufactures of lead valued at \$138,729.

The imports in 1918 were 7,853 tons, valued at \$1,240,247, besides manufactures of lead valued at \$110,442.

The exports of lead in ores, concentrates, etc., and as pig, amounted in 1919 to 12,235 tons, valued at \$1,389,012, as against 15,073 tons, valued at \$1,990,697, in 1918

The average price of lead at Montreal, the main Canadian market, in 1919, was 6.966 cents per pound, as against 9.250 cents in 1918.

(a) Does not include zinc ore shipments—See "Zinc."
(b) Includes manufactures of lead for which no quantities are given; in 1916, \$124,833; in 1917, \$165,764; in 1918, \$110,442; and in 1919, \$138,729.

MERCURY.

There has been no production of mercury recorded since 1897, although the Kerr Lake Mines, Ltd., of Cobalt, Ont., in their report to shareholders mention a small recovery for 1918 and 1919.

The imports of mercury in 1919 were 26,465 pounds, valued at \$31,573, as against 56,936 pounds, valued at \$68,703, in 1918.

The average price of mercury in New York in 1919 was \$92.15 per flask of 75 pounds, as against \$123.47 in 1918.

MOLYBDENUM.

The total production in 1919 representing the quantity of molybdenite (MoS₂) contents of the concentrates shipped for which payment was made, amounted to 83,002 pounds, valued at \$69,203, as against 378,029 pounds, valued at \$434,733, in 1918.

The total shipments of concentrates were in 1919, 46 tons, valued at \$69,203, as against 461.3 tons, valued at \$428,807, in 1918.

All the ore produced was concentrated in Canadian mills which treated 6,783 tons in 1919, as against 33,935 tons in 1918.

The exports of molybdenite in 1919 as shown by customs records were 113,500 pounds, valued at \$84,226, or an average of 74 cents per pound, as against 351,600 pounds, valued at \$402,435, or an average of \$1.14 per pound, in 1918.

NICKEL.

The production of nickel in 1919 amounted to 22,272.4 tons, valued at \$17,817,953, as against 46,253.6 tons, valued at \$37,002,917, in 1918.

The nickel production of Canada includes: The nickel in the matte produced from the treatment of the Ontario nickel-copper ores partly refined in Canada at Port Colborne, Ont., and partly exported for refining; the refined nickel and the estimated contents of the nickel oxides and nickel salts produced from the treatment of the silver-cobalt-nickel ores of Cobalt district.

The refined nickel produced in 1919 amounted to 5,064 tons, as against 1,504.5 tons in 1918. The large increase is due to the production of the new refinery at Port Colborne.

The imports of nickel in ingots, bars, sheets, etc., were in 1919, 195.5 tons, valued at \$135,959, besides manufactures of nickel valued at \$343,063, as against 319.1 tons, valued at \$238,895, and manufactures valued at \$204,208, in 1918.

The exports of nickel in ore and matte and of nickel fine in 1919 amounted to 20,508.2 tons, valued at \$8,077,593, as against 43,739.2 tons, valued at \$11,263,246, in 1918.

The price of refined nickel in New York was around 45 cents per pound throughout 1919.

PLATINUM AND ALLIED METALS.

The most important sources of the metals of the platinum group in Canada are those of the nickel-copper ores, but no attempt to recover them in Canada has been made previous to 1919.

These metals have been recovered for several years past in the refineries in the United States and England. No data is available as to the recoveries in England and those reported in the United States are believed to be derived mostly from the treatment of the Canadian nickel-copper matte.

A small recovery is reported every year from the treatment of the alluvial sands of British Columbia.

The Royal Mint at Ottawa has also recovered a few ounces of platinum and palladium during the last few years from the treatment of the residues obtained in its refinery.

The Port Colborne refinery of the International Nickel Company of Canada reported for the first time in 1919 a production of metals of the platinum group in an impure state.

The production from alluvial sands in 1919 was 25 crude ounces of platinum, valued at \$2,150, as against 39 ounces, valued at \$2,560, in 1918.

The production at Port Colborne in 1919 was 87 crude ounces of platinum and palladium valued at \$4,981.

The recovery at the Ottawa Royal Mint in 1919 was: platinum, 114.474 ounces, valued at \$8,055.27, and palladium, 0.696 ounces, valued at \$87 (also 20.782 ounces of iridium from treatment of South African gold bullion); the recovery in 1918 was: platinum, 15.936 ounces, valued at \$1,455.66 (also 49.775 ounces of iridium from treatment of foreign bullion).

The total recovery of the metals of the platinum group at the New Jersey plant of the International Nickel Company, was 1,683 ounces, with an estimated value of \$214,000. Gold and silver were also recovered from this source as well as the metals of the platinum group.

The recovery of platinum alone was in 1919, 616 716 ounces, as against 649 737 ounces in 1918.

The imports of platinum in 1919 were valued at \$160,885, as against \$31,140 in 1918.

The exports of platinum in concentrates, etc., and as "old and scrap" in 1919 amounted to 671 ounces, valued at \$62,629, as against 197 ounces valued at \$20,892 in 1918.

^{*}Other residues have occasionally been treated along with those derived from the Sudbury mattes but it is believed that the greater part of these recoveries may be credited to the Canadian source.

SILVER.

The silver production of Canada in 1919 amounted to 16,020,657 fine onnees valued at \$17,802,474, as against 21,383,979 fine ounces valued at \$20,693,704, in 1918, and included refined silver, or silver contained in silver and gold bullion, silver contained in blister copper and copper matte, and the silver estimated as recoverable from ores exported.

In 1919 Ontario produced 75.7 per cent of the total production; British Columbia, 23.1 per cent, and the balance of 2.2 per cent was derived from Quebec, Manitoba, and the Yukon.

The imports of silver in 1919 were: silver bullion valued at \$3,458,097, as against \$368,889 in 1918; and silver sterling and in coin valued at \$131,766, as against \$68,381 in 1918.

The exports of silver in 1919 were 15,405,161 fine ounces valued at \$16,410,797, as against 19,357,076 onnces valued at \$18,382,902 in 1918, and included silver as bullion and contained in ores, etc.

The average price of silver in 1919 was $111 \cdot 122$ cents per ounce, as against $96 \cdot 772$ cents in 1918.

⁽a) Includes silver from silver ores of Cobalt district, with also that derived from the treatment of the lead, zinc, gold, and copper ores.

TTN

Tin ores have not yet been found in sufficient quantities in Canada to be of economic importance.

The imports of tin in 1919 were valued at \$3,367,900, as against \$4,204,532 in 1918, and included tin in blocks, pigs, etc., tin foil, bichloride of tin, tin ware and tin crystals.

There are also large imports of tin plates and sheets, the quantity in 1919 being 43,407 tons, valued at \$6,436,047, as against 72,844 tons, valued at \$11,403,887, in 1918.

TUNGSTEN.

There was no production of tungsten ore reported in 1919. The production in 1918 amounted to 13½ tons, valued at \$11,700, with a metallic content of 19,915 pounds of WO₃. In 1917 only small test shipments were made, amounting in all to 580 pounds, running 69 41 per cent WO₃ and netting \$234. Most of the 1918 production was from the property of Acadia Tungsten Mines, Ltd., operating at Burnt Hill, N.B.

The only important production previous to 1918 was that of 1912, being 14 tons of concentrates produced by the Scheelite Mines, Ltd., of Moose River, N.S.

ZINC.

The zinc production in Canada, including the actual recoveries of refined zinc at Trail, B.C., and the estimated recoveries from ores and concentrates shipped to American smelters amounted to 16,097.4 tons, valued at \$2,862,448, as against 17,541.6 tons, valued at \$2,862,436, in 1918.

The total shipments of zinc ores and concentrates from the mines were in 1919, 135,535 tons, valued at \$1,049,493, and containing 59,959,709 pounds of zinc, as against 121,200 tons valued at \$1,228,195 and containing 64,655,713 pounds in 1918.

The refined zinc which is produced at Trail, B.C., amounted in 1919 to 12,326 tons, as against 12,574 tons in 1918, 9,985 tons in 1917, and 2,974 tons in 1916, the first year production was reported.

The imports of zinc in 1919 amounted to 11,903 tons, valued at \$1,822,376, with also manufactures valued at \$43,155, as against 15,654 6 tons, valued at \$2,718,850, with also manufactures valued at \$85,177, in 1918.

The imports of brass which alloy contains about 30 per cent zinc, were valued in 1919 at \$697,996, besides manufactures of brass, valued at \$3,266,343, as against imports of brass valued at \$993,574 and manufactures of brass valued at \$3,654,298 in 1918.

The exports in 1919 were: zinc ores, 6,630 tons, valued at \$296,212; and metallic zinc, 3,847 tons, valued at \$701,249; while in 1918 the exports are given as ores only and amounted to 10,545 tons, valued at \$476,791.

The average price of spelter in New York in 1919 was 7.338 cents per pound, as against 8.159 cents in 1918.

NON-METALLIC PRODUCTS.

ABRASIVE MATERIALS.

Corundum.—There were no sales of grain corundum reported in 1919 from Canadian corundum ores.

Twenty-six tons of grain corundum were recovered in 1919 from 1,300 tons of rock or old mill tailings treated. In the earlier days of the industry from 6 to 10 per cent of the rock milled was recovered in the form of grain corundum. During recent years a much lower grade of rock has been milled.

Corundum is found in an area embracing several townships in Renfrew and Hastings counties, in the province of Ontario. The industry made its appearance there in 1900, the production reaching a maximum in 1906. From 1907 to 1913 the yearly production was smaller, but fairly uniform. Operations were indefinitely suspended during August, 1918, but were renewed again in 1919, when the old Craig mine was reopened in June by Corundum, Limited, of Craigmont, Ont. The principal work done was in rebuilding and construction.

Grindstones, Pulpstones, etc.—The total production of grindstones, pulpstones, and scythestones in 1919 was 2,020 tons, valued at \$60,516, as against a production in 1918 of 3,072 tons, valued at \$83,005.

The production of abrasives has been a long-established industry in Nova Scotia and New Brunswick and in so far as output is concerned has remained practically stationary for many years.

The grindstones are shipped chiefly in a finished condition and are marketed in Canada, Newfoundland, and the United States, the prices ranging in 1919 from \$30 to \$50 per ton.

A number of pulpstones are usually made each year. Scythestones, both finished and in the rough, are also shipped, as well as occasionally small quantities of grit for marble polishing.

The greater proportion of the Canadian production of grindstones is exported. The value of the finished grindstones so exported during 1919 was \$38,682.

To meet Canadian requirements, in Ontario and Quebec chiefly, there were imported during 1919 grindstones to the value of \$281,066; burrstones, 1,106, valued

at \$3,421; emery, \$38,106; manufactures of emery, \$316,322; pumice stone, \$29,910; sandpaper, \$362,069; iron sand for glass, or polishing, or for sawing stone, \$10,247; artificial abrasives, valued at \$82,866, or a total value of \$1,124,007.

(f) Iron sand or globules for polishing glass or granite, or for sawing stone. Duty free. (g) Sandpaper, glass, flint, and emery paper or emery cloth. (m) 1st three months. (n) last nine months.

Tripolite (diatomaceous or infusorial earth).—The shipments of tripolite in 1919 were reported as 565 tons, valued at \$11,300, as compared with shipments in 1918 of 500 tons, valued at \$12,500.

The shipments from year to year have varied considerably and in some seasons the producing companies shipped from stock only, as was the case in 1919.

Since 1902 Nova Scotia has been the only province from which shipments of tripolite have been made. At the present time the principal operator is the Oxford Tripoli Company, operating in Colchester county. The crude product is dried and treated in a small mill.

A brief review of the uses of tripolite, together with a list of the principal known Canadian occurrences, was published in the Annual Report on Mineral Production for 1914.

ACTINOLITE.

No mining operations were earried on during 1919; shipments from stock were reported as 80 tons, valued at \$880—the value of the material after having been milled and prepared for market.

Production of actinolite in Canada has been confined to Elzevir and Kaladar townships, in Hastings and Addington counties, province of Ontario, the centre of the industry being Actinolite. The earliest operations date back to about 1883. For a time deposits were worked only at intervals long apart, when sufficient rock was broken to meet the demand for several subsequent years.

Actinolite is used as an ingredient for a coal-tar roofing compound, the grinding of the crude material being done in such a way so as not to destroy the fibre.

The only shipper in recent years is the Actinolite Mining Company, of Bloomfield, New Jersey, U.S.A., which owns the deposits noted, and also a grinding mill at Actinolite.

ARSENIC.

The demand for arsenie has been particularly strong. The Canadian production includes arsenious oxide refined and crude produced in the smelting of the arsenical silver-cobalt-nickel ores of the Cobalt district; in addition to which arsenic has been recovered at Tacoma, Wash., from the arsenical gold concentrates shipped from the Hedley gold mine at Hedley, B.C.

The total production in 1919 was 2,859 tons of arsenious oxide and approximately 530 tons of arsenic in concentrates, having a total valuation of \$509,924. The production in 1918 was 2,482 tons of arsenious oxide and approximately 1,078 tons of arsenic in concentrates, having a total valuation of \$563,639.

The exports of white arsenic in 1919 were 2,506 tons, valued at \$355,654. The imports of white arsenic were 4,706 pounds, valued at \$1,325; imports of sulphide of arsenic, 304,694 pounds, valued at \$26,613; and imports of arseniate, and stannate of soda, 5,566 pounds, valued at \$1,661.

ASBESTOS.

As usual the production has all been derived from Black Lake, Thetford, Robert-sonville, Coleraine, East Broughton and Danville, in the Eastern Townships, province of Quebec.

There was a falling off in 1919 in the output but an increase in the sales of crude asbestos. The shipments of mill stock were slightly less than in 1919.

The total value of the shipments of asbestos and asbestic in 1919 was \$10,975,369, as against \$8,970,797 in 1918.

The average number of men employed in mining was 2,060 and in milling 1,507, or a total of 3,567, and the total wages paid were \$3,954,407. The tonnage of rock mined and quarried was 3,082,384 and the tonnage milled 2,636,783.

Exports of asbestos during 1919 were 119,122 tons, valued at \$9,625,695, or an average of \$80.81 per ton, and of asbestic sand and waste, 25,306 tons, valued at \$260,775, or an average of \$10.30 per ton. There was also an export of manufactures of asbestos valued at \$232,501. In 1919 there were 10,500 tons, valued at \$942,796, exported to Great Britain; 95,176 tons, valued at \$7,232,744, to United States; 2,932 tons, valued at \$413,580, to France; 1,529 tons, valued at \$245,210, to Italy; 8,985 tons, valued at \$791,365, to other countries.

The imports of asbestos and manufactures of asbestos in 1919 were valued at \$656,037.

BARYTES.

Shipments of ground barytes in 1919 were 468 tons, valued at \$8,154, as compared with 640 tons, valued at \$10,165, in 1918.

During recent years the only barytes deposit worked in Canada has been that at Lake Ainslie, Inverness county, N.S. In the province of Ontario, however, a deposit located in Langmuir township, south of Porcupine, has been under development during the past few years by the Premier Langmuir Mines, Ltd.

Imports of barytes are not separately shown in the Trade classification. The imports of barium peroxide for the manufacture of hydrogen peroxide amounted to 52 tons, valued at \$23,788, in 1919, as compared with 53 tons, valued at \$27,893, in 1918. There is also a small import of artificial sulphate of barium known as blanc fixé, the imports being included with satin white. These imports in 1919 were 3,718 tons, valued at \$114,732.

Blanc fixé (barium sulphate) is artificially prepared by treating a solution of barium salt, generally the chloride with sulphuric acid, or aluminium sulphate. It is used for coating papers.

Satin white is an artificially prepared mineral for coating paper, consisting of precipitated calcium sulphate and alumina, prepared by grinding together the necessary proportions of alum and slaked lime with sufficient water.

CHROMITE.

The total shipments in 1919 of ores and concentrates, all from the Eastern Townships, Quebec, were 8,541 short tons, valued at \$228,898, or an average of \$26.80 per ton, the total content of Cr₂O₃, being 3,764 tons.

The 1919 shipments included: Crude ore, 3,376 short tons, valued at \$69,894, or an average of \$20.70 per ton and with an average Cr_2O_3 content of 35·3 per cent; concentrates, 5,165 short tons, valued at \$159,004, or an average of \$30.78 per ton, and with an average Cr_2O_3 content of 49·8 per cent. The crude ore shipped included 371 tons sold for consumption in Canada and 3,005 tons sold for export. The concentrates with the exception of about 2 tons were sold for export.

The exports of chromite in 1919 as per Trade reports were 9,078 tons, valued at \$198,733, or an average of \$21.89 per ton, as compared with exports in 1918 of 15,831 tons, valued at \$353,616, or an average of \$22.32 per ton.

Ferro-chrome has been imported into Canada, but there is no separate record of the quantities thereof. The imports of bichromate of soda in 1919 were 1,003,836 pounds, valued at \$113,478; and imports of bichromate of potash 58,072 pounds, valued at \$19,525.

a Shipments as reported directly by operators in 1916 were 27,517 tons, valued at \$311,460; and in 1917, 36,725 tons valued at \$499,682.

COAL AND COKE.

Coal.—The total production of marketable coal during 1919 (comprising sales, colliery consumption, and coal used in making coke, or used otherwise by colliery operators) was 13,681,218 short tons, valued at \$54,413,349, or an average of \$3.98 per ton.

The production in 1918 was 14,977,926 short tons, valued at \$55,192,896, compared with which the 1919 production shows a decrease of 1,296,708 tons, or 8.66 per cent in quantity and \$779,547, or 1.41 per cent in total value.

The total output of coal including waste and unmarketable slack in 1919 was 14,080,655 tons, as against 15,460,385 tons in 1918.

The 1919 production included 111,324 tons of anthracite, all from one mine in Alberta; 10,642,902 tons of bituminous coal and 2,926,992 tons of lignite.

Every province, with the exception of Saskatchewan, shows a decrease. The Nova Scotia production fell off 98,189 tons, as compared with 1918; New Brunswick, 89,104 tons; Saskatchewan increased by 33,322 tons; Alberta decreased 1,008,281 tons; British Columbia decreased 132,656 tons; and Yukon decreased 1,800 tons.

Coke.—The accompanying statistics cover only the production of coke in by-product and Bechive coke oven plants and do not include retort coke recovered by gas companies.

Both domestic and imported coal are used in the manufacture of coke in Cana-

dian coke-oven plants.

The total output during 1919 was 1,160,470 short tons made from 1,880,541 tons of coal, of which 854,835 tons were of domestic origin and 1,025,706 tons imported. The output thus averaged 0.617 ton of coke per ton of coal charged. The total coke used, or sold by producers during the year was 1,133,680 tons, valued at \$9,720,387; or an average of \$8.58 per ton.

By provinces the output was: Nova Scotia, 394,744 tons; Ontario, 667,081 tons;

and British Columbia, 98,645 tons.

The ovens operated during the year were those at Sydney, and Sydney Mines, N.S.; Sault Ste. Marie, and Hamilton, Ont.; and Fernie, Michel, Union Bay, and Anyox, B.C.

At the close of the year 587 ovens were in operation.

The exports of coke in 1919 were 14,709 tons, valued at \$129,703, or an average of \$8.82 per ton, as against exports in 1918 of 29,612 tons, valued at \$223,629, or an average of \$7.55 per ton. The imports of coke in 1919 were 383,374 tons, valued at \$2,405,740, or an average of \$6.27 per ton, as against imports in 1918 of 1,165,590 tons, valued at \$8,975,445, or an average of \$7.70 per ton.

The estimated consumption of oven coke in 1919 was 1,502,345 tons, as compared with 2,386,722 tons in 1918.

Of the total output of coke 1,036,229 tons, or 89 per cent were made in by-product recovery ovens and the recovery of by-products included: Animonium sulphate, 11,765 tons, and tar, 12,394,249 gallons, as against 10,825 tons of ammonium sulphate and 8,009,327 gallons of tar in 1918.

FELDSPAR.

The shipments of feldspar in 1919 were 14,679 tons, valued at \$86,231, or an average of \$5.87 per ton, as compared with shipments in 1918 of 18,782 tons, valued at \$112,728, or an average of \$6 per ton.

The greater part of the feldspar shipped from Canadian mines is marketed with the pottery manufacturers in the United States. The production comes chiefly from the counties of Frontenac and Lanark in Ontario and the counties of Ottawa and Labelle in Quebec.

The exports of feldspar during the year were valued at \$104,285.

⁽a) Not separately stated prior to April, 1917. (b) Last 9 months' exports were 15,469 tons valued at \$77,270.

FLUORSPAR.

The production of fluorspar shows a substantial decrease. The smaller production from Madoc, Ont., was supplemented by increased shipments from the recently opened deposit in Yale district of British Columbia.

The total shipments during 1919 were 5,063 tons, valued at \$97,837, as compared with 7,362 tons, valued at \$156,029, in 1918.

Only three companies in the Madoc district reported shipments during the year at an average value of \$17.31, as compared with an average of \$20.97 in 1918. Prices varied with the grade of the product from \$16 to \$27 per ton.

The Consolidated Mining and Smelting Company is operating the "Rock Candy" fluorspar deposit on Kennedy Creek, Kettle river, near Grand Forks, B.C. The company reports very favourable indications for a large tonnage in excess of their own requirements, for export.

Canadian steel companies use from 10,000 tons to 15,000 tons per annum.

GRAPHITE.

The production of graphite in 1919 showed a considerable falling off. The total shipments included 1,340 tons, valued at \$99,821, from Ontario, and a small shipment of 20 tons, valued at \$400, from Quebec.

By grades the shipments included 95 tons of No. 1 flake, valued at \$22,100, or an average of \$232.63 per ton; 103 tons of No. 2 flake, valued at \$14,853, or an average of \$144.20 per ton; and 1,162 tons of No. 3, and dusts, valued at \$63,268, or an average of \$54.45 per ton.

In 1918, Ontario contributed 2,934 tons, valued at \$208,852, and Quebec and Baffin Land, 180 tons, valued at \$40,018.

The quantity of ore milled during the year was 7,076 tons, from which were produced 1,648 tons of milled, or refined graphite.

The total quantity of ore milled during 1918 was 11,358 tons, from which were produced 3,225 tons of refined, or milled graphite. The Black Donald (Calabogie, Ont.) ore consists largely of amorphous graphite, from which a large mill recovery is made.

Graphite operators reported that of the total shipments 1,317 tons, valued at \$95,357, were sold for export. Trade records show exports of graphite or plumbago, crude and refined, 1,003 tons, valued at \$72,917, and manufactures of plumbago (probably chiefly refined graphite), valued at \$23,970, a total export of \$96,887. The Customs export classification was revised as from April 1, 1919, the class "plumbago, crude and concentrates" being replaced by "graphite, or plumbago, crude and refined."

Artificial Graphite.—Artificial graphite is manufactured in electric furnaces at Niagara Falls, Ont., by the International Acheson Graphite Company. The annual production has been as follows:—

Calendar Year.	Pounds.	Calendar Year.	Pounds.	Calendar Year.	Pounds.
1908 1909	407,779 428,540 513,436	1912 1913	2,302,625 2,184,472 1,234,239	1916 1917 1918 1919	1,096,172 1,808,698

GYPSUM.

The total quantity of gypsum rock quarried in 1919 was 303,998 tons, of which 121,496 tons were calcined. The shipments of all grades totalled 299,063 tons, valued at \$1,215,287, and included: lump gypsum, 172,781 tons, valued at \$206,858; crushed, 27,939 tons, valued at \$68,002; fine ground, 3,842 tons, valued at \$18,901, and calcined, 94,501 tons, valued at \$921,526. By provinces the shipments were: Nova Scotia, 163,852 tons, valued at \$250,174; New Brunswick, 42,409 tons, valued at \$315,656; Ontario, 59,899 tons, valued at \$278,120; Manitoba, 32,903 tons, valued at \$371,337.

The average number of men employed in 1919 was 725 and wages paid \$380,105,

as compared with 435 men employed and \$275,312 paid in wages in 1918.

Exports of crude gypsum were 148,394 tons, valued at \$199,857; and of gypsum ground valued at \$140,235.

The imports of gypsum of all grades during 1919 were valued at \$47,455 and included: crude gypsum, 1,238 tons, valued at \$22,556; ground gypsum, 85 tons, valued at \$2,695, and plaster of Paris, 1,525 tons valued at \$22,204.

MAGNESITE.

The production of magnesite obtained from the deposits in Argenteuil county, Quebec, is marketed as crude magnesite, calcined, and dead burnt clinker (the latter being sintered in rotary kilns after mixture with about 5 per cent of iron ore in the form of magnetite). The total shipments in 1919 were 11,278 tons, valued at \$328,465, as compared with shipments in 1918 of 39,365 tons, valued at \$1,016,765.

There were marketed about 1,638 tons of crude magnesite, valued at \$14,664, averaging about \$8.95 per ton. Calcined material sold at from \$20 to \$22 per ton and dead burnt clinker averaged \$35 per ton.

In 1919 about 14,952 tons of magnesite rock were quarried and about 12,214 tons were calcined in lime kilns, or sintered in rotary cement kilns. The sintering was done at the plants of the Canada Cement Company at Hull and Montreal.

Exports of magnesite in 1919 were valued at \$425,892. During the last nine months this included 5,638 tons, valued at \$170,797.

Metallic Magnesium,-The manufacture in Canada of metallic magnesium was carried on for a few years during the war by the Shawinigan Electro Metals Company, Limited, at Shawinigan Falls, Que., the metal being made from imported magnesium chloride salts.

Magnesium Sulphate.—Sulphate of magnesium, epsomite, or crude Epsom salt has been found in several localities in southern British Columbia.

Commercial shipments were made during the past few years from a deposit near Kruger mountain, Osoyoos division, B.C., where the mineral is found in a flat depression known as Spotted lake, which is a partially dried-up lake containing alternate circles of water and dry places. The Stewart-Calvert Company, Inc., of Oroville, Washington, has been operating this deposit. The crude magnesium sulphate salt is hauled to the company's works at Oroville, where the crude salt is refined and prepared for the market. Shipments in 1916 were reported as 250 tons, and in 1915 about 300 tons. In addition to the Spotted Lake deposit the same company also made shipments during 1918 from a deposit near Clinton, in Lillooet, B.C.

Several lakes containing these salts have been observed on the Basque ranch, near Ashcroft. Following investigations of their probable commercial value shipments were made in 1919 by the Basque Chemical Production Company, Limited.

The greater part of the refined salt is used for industrial purposes, the tanning industry taking the largest proportion, though considerable amounts are also used in the textile industries and in the manufacture of dyes. About 20 per cent of the total shipments go to the drug trade.

MANGANESE ORE.

The production of manganese ore in Canada has been small and irregular. During 1919 operations were renewed at New Ross, in Nova Scotia, and shipments again reported from Kaslo, B.C. The bulk of the reported shipments for the year were, however, made from the Hill 60 group of claims near the village of Cowichan Lake, Vancouver island.

The manganese ores which have been mined in eastern Canada are pyrolusite, manganite, psilomelane, and bog manganese. These were mostly ores with a high manganese content, and fairly free from deleterious constituents. The largest part of the production was consequently put to those uses, where a high grade raw material is desired, e.g., as an oxidizing agent in the manufacture of chlorine, bromine, manganates, and permanganates; as a decolorizer of glass, porcelain, and enamels; as a colouring material in dyeing and pottery and paint manufacture; as a drier in paints and varnishes, and in the manufacture of dry and Leclanehe cells, etc.

The first shipments of manganese ore from British Columbia were made in 1918

from deposits near Kaslo. These consist mainly of wad or bog manganese.

At the Cowichan Lake deposits, Vancouver island, "Manganese ore of merchantable value is found as a mixture of secondary oxides, principally pyrolusite, psilomelane, and magnetite, derived from the alteration of rhodonite, the silicate of manganese, which occurs in strong outcrops throughout the manganiferous area. On Hill 60 claim oxidation of the silicate has taken place on a considerably larger scale than on some of the other claims, resulting in outcrops of hard and massive oxides containing from 15 to 57 per cent metallic manganese."

Shipments from both these deposits have been made to the Bilrowe Alloys Com-

pany of Tacoma, Wash., U.S.A.

No separate record of imports of manganese ore is kept in the Trade classification but statistics of oxide of manganese are given. In 1919 these imports were 2,082 tons, valued at \$89,314. Imports of ferro-silicon, spiegeleisen and ferro-manganese in 1919 were 16,221 tons, valued at \$901,678. The exports of manganese ore in 1919 were 603 tons, valued at \$13,401.

MICA.

The total shipments of mica by mine operators in 1919 were 2,754 tons, valued at \$273,788. By provinces the production was: from Quebec, 2,429 tons, valued at \$218,437 (of this 2,158 tons, valued at \$52,728, was rough-culled and scrap); Ontario, 325 tons, valued at \$55,351, or an average of \$170.31 per ton.

The statistics as to the value of production should be considered with due regard to the conditions under which the industry is conducted. The condition in which mica is shipped from the mines varies greatly; one operator may ship his output cleaned and trimmed, while the output of another is in a rough cobbed state, with consequent noteworthy difference in prices realized. And, further, companies operating trimming shops as well as mines may place only a nominal value on shipments from mines to trimming shops.

Canada's production of mica has come exclusively from two fields: one in the province of Quebec, a short distance north of the city of Ottawa, and the other embracing parts of the counties of Lanark, Leeds, and Frontenac, in the province of Ontario. The city of Ottawa (and the adjacent city of Hull), lying between these two fields, is the centre to which almost all the production of the various mines and numerous small prospects is shipped for trimming, grading, and marketing. In preparation for the market a considerable proportion of the tonnage received is cobbed out and the mica split, trimmed and otherwise manufactured, with the result that the exports, though of smaller tonnage than the shipments from the mines, usually exceed them in total value.

According to Trade records the exports of mica in 1919 were 2,741 tons, valued at \$641,962.

MINERAL PIGMENTS (IRON OXIDES).

For many years there has been an annual production in the province of Quebec of iron oxide from deposits situated between Champlain and Three Rivers, a short distance from the St. Lawrence river.

These oxides are marketed after calcining, as paint materials, and are also sold crude for use in the purification of illuminating gas. The mineral paint is calcined, washed, and fine ground before shipment.

There was a small production included in the totals for 1917 and 1919 of zinc oxide for use as a pigment, the production being obtained at the oxide plant of the Canadian Zinc Products Company, Limited, at Notre-Dame-des-Anges.

The total production of iron oxides in 1919 was 11,862 tons, valued at \$113,427.

The exports of mineral pigments, iron oxides, ochres, etc., in 1919 are reported as 767 tons, valued at \$25,229.

Imports of mineral pigments are included under two classifications: (1) ochres and ochrey earths, siennas and umbers, duty 20 per cent, and (2) oxides, roughstuffs, fillers, fireproofs and colours, dry, n.e.s., duty 25 per cent. During 1919 imports under the first classification were 1,297 tons, valued at \$65,744, and under the second classification 3,378 tons, valued at \$518,780, or a total import of 4,675 tons, valued at \$584.524.

MINERAL WATER.

The statistics of production given herewith represent as usual, as closely as can be ascertained, the value of mineral water shipped from mineral springs in bottles, barrels, or other containers, and do not include any estimate of the value of mineral water used at springs for drinking or bathing purposes; nor are the natural pure spring waters included, of which a considerable quantity is sold in bottled form.

The value of the production in 1919 was \$71,015, as compared with \$154,468 in 1918; of the 1919 production, Quebec is credited with \$13,257; Ontario, \$55,958; and British Columbia, \$1,800.

The imports of mineral and aerated waters during the calendar year 1919 were valued at \$113,743, being 1,026 gallons of natural mineral water, valued at \$430; and aerated water valued at \$113,313. The exports of mineral water during the same year were valued at \$59,669, of which 122 gallons, valued at \$89, were for natural mineral water and \$59,580 for bottled aerated water.

	19	016.	19	1917.		1918.		19.
		Value.		Value.		Value.		Value.
Production		130,933		108,444		\$ 154,468 105,967 20,214		\$ 71,015 113,743 59,669

NATURAL GAS.

The total production of natural gas in Canada in 1919 was 19,937,769 thousand cubic feet, valued at \$4,176,037, of which Ontario contributed 11,024,041 thousand cubic feet, valued at \$2,690,400; Alberta, \$,230,838 thousand cubic feet, valued at \$1,365,127; and New Brunswick, 682,890 thousand cubic feet, valued at \$120,510.

The value of the gas, as reported by producers, varies from 5 cents to 30 cents per thousand feet, but these prices do not represent what the consumer has to pay.

In some cases the producer also owns the distribution pipe line and receives the full price paid by the consumer. In other cases the producer may sell to a pipe line company who either sells directly to consumers, or may in turn resell to other pipe line companies for retail distribution; in such cases as these the producer receives only a fraction of the amount paid by the consumer, but he is saved the expense of distribution. The statistics given herewith represent, as far as possible, the value received by the producer, or owner, of the gas well, whether such producer be the owner of the distribution line or not.

Natural Gas Production, 1916-17-18.

PEAT.

During the year two bogs were operated, one at Garneau, Que., and the other at Alfred, Ont. About 2,500 tons were manufactured, while shipments were reported as 986 tons, valued at \$6,561.

These were the first shipments of peat since 1916. During the latter year about 300 tons, valued at \$1,500, were shipped from a bog in Middlesex county, Ontario. In 1915 shipments were made from the Alfred bog, Prescott county, amounting to 300 tons, valued at \$1,500.

PETROLEUM.

A bounty of 1½ cents per gallon is paid on the marketed production of crude oil from Canadian oil-fields, the administration of the "Petroleum Bounty Act" being under the Department of Trade and Commerce. According to the bounty record the production in 1919 in Ontario was 219,804 barrels (7,693,141 imperial gallons), which at the average price per barrel of \$2.845 was worth \$625,342. The New Brunswick production was 4,225 barrels, worth about \$13,141, or an average value of \$3.11. For five years there has been a small but growing production of crude petroleum in Alberta, the greater part of which, however, does not earn the bounty because of its lightness, or low specific gravity. The approximate production in 1919 was 16,437 barrels, valued at \$97,841.

The total production in Canada from all sources was therefore 240,466 barrels (8,416,310 imperial gallons), valued at \$736,324.

The price of crude oil at Petrolia was quoted at \$2.78 on July 10, 1918, to September 8, 1919. Prices on this date were advanced ten cents per barrel and were in force to November 21, when they further advanced to \$3.13 per barrel. On December 22, they were increased to \$3.38 per barrel, remaining at this price to the end of the year. The average monthly price was, therefore, \$2.845, as compared with \$2.69\frac{1}{2}\$ in 1918, \$2.33\frac{1}{2}\$ in 1917, and \$1.98\$ in 1916.

The production (in barrels) of the various fields in the province of Ontario, as kindly furnished by the Supervisor of Petroleum Bounties at Petrolia, was as follows: Petrolia and Enniskillen, 70,087; Oil Springs, 45,245; Moore township, 4,029; Sarnia township, 4,259; Plympton township, 560; Bothwell, 29,425; Tilbury 18,365; Dutton, 1,272; Onondaga, 197; Mosa township, 45,860; Thamesville 801.

The production in New Brunswick is all obtained in the Stoney Creek district, Albert county. The Alberta production was obtained from six wells situated in the Turner Valley field, near Black Diamond, and about 35 miles southwest of Calgary.

In 1919 ten oil refineries in Canada used 299,986,199 gallons of crude oil, of which 292,281,146 gallons were imported, and 7,705,053 gallons were obtained from Canadian wells. The production of refined oils and petroleum products included: Gasoline and motor oils, 87,248,413 gallons; benzoline, benzene, and other light oils, 4,516,783 gallons; illuminating oils, 55,360,322 gallons; lubricating oils, 16,113,694 gallons; gas and fuel oils and tar, 95,216,183 gallons; wax and candles, 11,271,993 pounds; petroleum coke 113,514,982 pounds. There was also a production of asphalt and other products amounting to \$901,029. The total value of the products of refineries was \$42,856,074.

According to inspection returns of the Inland Revenue Department the total quantity of illuminating oils inspected during the calendar year 1919 was 63,480,214 gallons, and the quantity of naphtha or gasoline and other light oils was 97,519,950 gallons.

Exports of petroleum entered as crude mineral oil in 1919 were 603,748 gallons, valued at \$40,648, and of refined oil 2,846,293 gallons, valued at \$287,170. There was also an export of naphtha or gasoline of 1,566,707 gallons, valued at \$428,754.

The total value of the imports of petroleum and petroleum products in 1919 was \$29,560,023, as against a value of \$30,749,570 in 1918.

The total quantity of petroleum oils, crude and refined, imported in 1919 was 451,261,646 gallons, as compared with 420,728,933 gallons in 1918. A detailed record will be found in the accompanying tables.

PHOSPHATE.

The small production of phosphate, or apatite, which has been obtained in Canada since 1896 has been produced almost altogether as a by-product in connection with the mining of mica. Shipments during 1919 totalled 24 tons, valued at \$331.

Phosphate is used at Buckingham, Que., in the manufacture of phosphorus and ferro-phosphorus, and the main supply of ore is obtained from Florida.

PYRITES.

The shipments of pyrites as sulphur ore from Canadian mines were considerably smaller than in the previous year. The total shipments were 176,487 tons, valued at \$522,704, and included 52,746 tons, valued at \$203,222, from the province of Quebec; 117,011 tons, valued at \$285,832, from the province of Ontario; and 6,730 tons, valued at \$33,650, from the province of British Columbia. The total sulphur content of shipments was 65,674 tons, or an average of 37.2 per cent.

The principal shipments were obtained from the same sources as in the previous year with only half the tonnage. In Quebec, cupriferous ores were shipped from the Eustis and Weedon mines, in the Eastern Townships. In Ontario the largest shippers for export were the mines at Goudreau, on the Algoma Central railway, in Michipicoten district, and at North Pines, on the Canadian National railway, northwest of Port Arthur. Mines shipping for domestic consumption were the Helen, in Michipicoten, the Sulphide, the Queensboro, and the Clyde Lake. In British Columbia shipments were made from the Sullivan mine at Kimberley to the sulphuric acid plant at Trail, and from Anyox to the acid plant at Barnet, B.C.

Customs records show exports of pyrites during 1919 as 89,089 tons, valued at \$388,508. These figures are much less than those reported directly by the operators, and it is possible that some of the exports from Quebec may be entered as a copper ore. The imports of brimstone, or sulphur in roll or flour were 56,062 tons, valued at \$1,015,223.

Sulphuric Acid.—Sulphuric acid is manufactured in different grades or strengths, and in recording statistics of production it is desirable for purposes of comparison that the quantities of the several grades should be reduced as far as possible to a uniform standard.

Production records have been obtained in terms of the standard grades 50° Bé., 60° Bé., 66° Bé., and stronger acids. The quantities of the first two grades have, however, in the following statistics been reduced to their equivalent in 66° Bé., acid.

The total production of sulphuric acid in Canada during the twelve months ending December 31, 1919, derived from seven producing plants expressed in terms of 66° Bé, acid was 63,596 short tons. The production during the first six months of 1919 was 30,030 tons and during the last six months of the year 33,566 tons.

The ores used in the manufacture of sulphuric acid in 1919 included 2,245 tons of imported sulphur, or brimstone, and 54,879 tons of pyrites, chiefly from Canadian mines but including 1,266 tons imported.

The production during the first six months of 1920 was 38,891 tons from seven plants, the quantity of imported sulphur used being 4,848′ tons, and of Canadian pyrites 24,458 tons, averaging 37·3 per cent sulphur.

Exports of sulphuric acid during 1919 were 10,894,200 pounds, valued at \$108,392. Imports of sulphuric acid in 1919 were 1,437 tons, valued at \$38,759.

^{*}Record includes a small production of oleum and other grades, the strength of which is not specified. An approximate estimate of production in terms of 50° acid will be obtained by increasing these figures by 50 per cent.

†Tons of 66° Bé acid.

QUARTZ (SILICA).

The statistics of quartz, or silica production given in the tabulated statement herewith include chiefly the quartz or quartzite used in the smelting of nickel and copper ores, in the manufacture of ferro-silicon, and in the manufacture of sanitary ware, or earthenware. Production of silica in the form of infusorial earth has already been included under tripolite, and a small production of silica in the form of crushed sandstone used in the manufacture of glass and for foundry work in steel plants is included in the statistics of sandstone production.

The total shipments of quartz, or quartzite, in 1919 was 94,991 tons, valued at \$527,635.

Imports of silex, a finely ground quartz, in 1919 were 641 tons, valued at \$13,825, and the imports of flint were 5,411 tons, valued at \$100,902.

SALT

The total sales of salt in 1919, including the salt equivalent of brine used for chemical manufacturing, were 148,301 tons, valued at \$1,397,929. These values as far as possible exclude the value of packages which amounted to \$573,795. By grades the production included: table and dairy, 34,396 tons; common fine, 47,571 tons; common coarse, 64,426 tons; and land salt, 1,908 tons.

The number of men employed in 1919 was 329; wages paid, \$350,141.

The Canadian production was obtained almost entirely from the salt field in southern Ontario. Some years ago there was a small production from brines near Sussex, New Brunswick, and at lake Winnipegosis in Manitoba. The deposit of rock salt opened up in the neighbourhood of Malagash, Cumberland county, Nova Scotia, continued development work during 1917 and shipped about 174 tons in 1919. This is the first known discovery of rock salt in the Maritime Provinces, and the first in Canada to be discovered at a depth sufficiently shallow to allow it to be won economically by actual mining. A small shipment was also reported from Senlac, Sask.

The exports of salt in 1919 were 617 tons, valued at \$14,573. The imports of salt were 147,406 tons, valued at \$1,310,129, and included: 51,941 tons of fine salt in bulk, valued at \$289,109; 33,173 tons of salt in packages, valued at \$467,581; and 62,292 tons of salt imported from Great Britain, or any British possession for the use of fisheries, valued at \$553,439.

The calculated consumption of salt in 1919 was 295,090 tons, valued at \$2,693,485 (the value of the imported salt being that at point of origin.)

Caustic soda and chloride of lime are manufactured by the Canadian Salt Company at their chemical works at Sandwich, Ont. The Brunner-Mond Canada, Ltd., Amherstburg, Ont., manufacture soda ash.

The imports of salt cake (sodium sulphate) in 1919 were 23,953 tons, valued at \$343,007; soda ash (sodium carbonate) 31,319 tons, valued at \$1,305,348; sal soda, 5,439 tons, valued at \$164,259, and chloride and hypochloride of lime, 8,909 tons, valued at \$304,691.

TALC.

The total shipment of crude and ground tale by mine operators during 1919 were 18,642 tons, valued at \$116,295. A considerable portion of the shipment of crude mineral included above is ground at Madoc, and the total shipments of ground tale during 1919 were 15,927 tons of varying grades having an average value of about \$14.75 per ton, as compared with 15,903 tons averaging about \$14 in 1918. Crude tale sold at from \$4 to \$5 per ton.

The Henderson mine has been operated for some years, the greater part of the output being sold to Geo. H. Gillespie & Co., who operate a grinding mill at Madoc, the balance being exported to United States. The Connolly Mine, of the Anglo-American Tale Corporation, was also operating, as well as the Eldorado mine of the Eldorado Mining & Milling Co. Small shipments of tale were reported from British Columbia in 1916, 1917, and 1919.

Exports of talc for the twelve months ending December 31, 1919, were valued at \$210,150, being: crude talc, 805 tons, valued at \$4,740; refined talc, 9,624 tons, valued at \$158,863, for the last nine months of the year; crude and refined for the first three months were valued at \$46,547.

Imports of tale have not been separately recorded since 1915.

STRUCTURAL MATERIALS AND CLAY PRODUCTS.

INTRODUCTORY.

The subjects included under this heading comprise cement, clay products of various kinds, such as brick, sewerpipe and tile, pottery, etc., lime, sand-lime brick, sand and gravel, slate, and stone for building and other purposes, including granite, marble, limestone, sandstone, etc.

The total value of the production of these structural products in 1919 was \$27,-421,510, as compared with \$19,130,799 in 1918, \$19,837,311 in 1917, and \$17,467,186 in 1916, the increase in 1919 being \$8,290,711, or 43.3 per cent, as compared with the provious year.

The total value of this class of imports in 1919 was \$6,691,291, as against \$8,117,394 in 1918, \$7,901,398 in 1917, and \$5,562,220 in 1916.

The total exports were valued at \$944,273, as against \$608,886 in 1918, \$647,369 in 1917, and \$681,239 in 1916.

The apparent total consumption based upon the record of production, imports and exports, was, therefore, in 1919, valued at \$33,168,528, as compared with \$26,639,307 in 1918, \$27,091,340 in 1917; and \$22,348,167 in 1916, the increase in value of consumption in 1919 being \$6,529,221.

A summary of the production, imports, exports, and consumption of structural materials and clay products in 1919 follows.

Structural Materials, Calendar Year 1919.

	Production:	Imports.	Exports.	Consumption.
Cement, portland	7,906,366 2,310,607 484,854 2,680,460 10,853	5,269,328 53,190 200,428 142,977	164, 254 128, 810 131, 140	13,011,440 2,234,987 484,854 2,749,748 153,830
	27, 421, 510	6,691,291	944, 273	33, 168, 528

CEMENT.

The total quantity of cement sold from Canadian cement mills in 1919 was 4,995,257 barrels, valued at \$9,802,433, or an average of \$1.96 per barrel—an increase in quantity sold of 1,403,776 barrels, or 39 per cent, and an increase in total value of \$2,725,930 or 381 per cent.

Sales of cement from mills in Quebec in 1919 were 2,260,422 barrels, valued at \$4,340,010; in Ontario, 2,023,280 barrels, valued at \$3,650,585; and from Manitoba, Alberta, and British Columbia, 711,555 barrels valued at \$1,811,838.

The total quantity of cement made in 1919 was 4,613,588 barrels, as compared with 3,417,600 barrels in 1918, an increase of 1,195,928 barrels, or 35 per cent.

Stocks of cement on hand January 1, 1919, were 1,471,865, and at the end of December had been reduced to 1,089,970 barrels.

The total imports of cement in 1919 were 49,232 hundredweight, equivalent to 14,066 barrels of 350 pounds each, valued at \$51,314, or an average of \$3.65 per barrel.

The total consumption of cement, therefore, was 4,831,817 barrels, an increase of 1,234,423 barrels, or 34.3 per cent.

CLAYS AND CLAY PRODUCTS.

For a number of years a small quantity of fireclay has been produced and sold as such, and during the past few years there has been a small production of kaolin, or china-clay, from a deposit in the province of Quebec. With these exceptions, the clay production in Canada consists almost altogether of the manufactured product.

The clay products made in Canada comprise brick of various kinds, including common and pressed, ornamental and fancy building brick, paving brick, firebrick, porous fireproofing brick and blocks, sewerpipe and drain tile, pottery and sanitary ware, the last two products chiefly from imported clays.

The total value of the clay products sold or marketed in 1919 was \$7,906,366, as compared with a value of \$4,583,489 in 1918, \$4,779,038 in 1917, and \$4,120,805 in 1916. The value of the production in 1919 shows an increase of \$3,322,877 as compared with the previous year.

The average number of men employed in 1919 was 4,613, as compared with 3,423 in the previous year, and the total wages paid were \$3,356,464, as against \$2,131,614.

Of the total value of the sales in 1919, building brick and fireproofing contributed \$5,627,138, or about 71.2 per cent. Sewerpipe and tile production, \$1,690,656, or 21.3 per cent. The total value of the production of pottery was \$890,320, of which \$185,474 only is estimated as attributable to Canadian clays, the balance being credited to imported clays.

The value of the production of fireclays and firebrick from domestic clays was \$389,354, and the production of kaolin was 759 tons, valued at \$13,744.

Detailed statistics of production of the several classes of clay products by provinces in 1919, are shown in the following table:—

⁽a) There was also a production of \$704,846 from imported clays. (b) There was also a production of \$64,133 from imported clays. (c) of which \$40,527 is credited to terra-cotta.

Clay Paving Brick.—Paving brick has been made in Canada, chiefly at West-Toronto, Ont., from shale obtained from the banks of the Humber river, and more recently during the years 1915 and 1916 there was a small production reported from Clayburn, B.C. There was no production reported for the past three years. The annual production for a number of years varied from 3,000,000 to over 5,000,000 per season.

Drain Tile.—The total sales of drain tile in Canada as reported to this branch were 20,078 thousand, valued at \$616,510. The greater part of this production is from Ontario, the sales in this province as reported by the producers being 19,047 thousand, valued at \$553,184.

Kaolin.—The shipments of kaolin in 1919 were 759 tons, valued at \$13,744, as compared with 863 tons, valued at \$19,299, in 1918.

The production was obtained from the deposits in the township of Amherst, Ottawa county, Quebec, operated by the Canadian China Clay Company, of Toronto.

The plant for refining the clay is situated 2 miles from St. Remi d'Amherst, and 7 miles from Huberdeau, the terminus of the Montfort branch of the Canadian National Railway, 46 miles northwest of Montreal.

Pottery.—Sanitary porcelain is made at St. Johns, Que., and electrical porcelain is made at Hamilton and Peterborough, Ont. These are the only firms in Canada at present making white wares. The raw materials, including clays, ground quartz and feldspar are all imported.

Stoneware pottery, such as crocks, jars, churns, and jardinieres, is made at Medicine Hat, Alta., from Saskatchewan clay; at Hamilton, Ont., from imported clays; and at St. John, N.B., partly from Nova Scotia clay.

Flower pots are made at a few localities from the red burning and tile clays of the vicinity.

Refractories.—The total value of the sales of fireclay, firebrick, fireclay brick and magnesite brick in 1919 was \$389,354. There was in addition a production of fireclay products, valued at \$64,133, reported as being made from imported clays. The production in 1919 included: Fireclay, or refractory clay sold as such, 4,600 tons, valued at \$24,163; firebrick, including silica brick and magnesite brick in addition to fireclay brick, 5,610 thousand, valued at \$268,756; and other fireclay products valued at \$96,435.

Sewerpipe.—The total sales of sewerpipe in 1919 were 62,821 tons, valued at \$1,074,146. About 56.7 per cent of the value of the production is credited to Ontario.

LIME.

The production of lime in 1919 is reported as 7,147,504 bushels, valued at \$2,310,607, or an average of 32.3 cents per bushel. Fifty-eight firms reported with 868 men employed, and wages \$829,459.

The average price per bushel of lime sold in 1919 varied from a minimum of 20 cents in Nova Scotia to a maximum of 53½ cents in British Columbia. About 87 per cent of the total reduction was derived from Ontario, Quebec, and the Maritime Provinces. The production of hydrated lime was 27,950 tons, valued at \$295,164.

The exports during 1919 were 9,654 tons, valued at \$128,810, while the imports were 3,977 tons, valued at \$53,190.

SAND-LIME BRICK.

The first record of the production of sand-lime brick in Canada was obtained for the year 1907, when there was a production by ten firms amounting to 16,492,971 brick, valued at \$167,795.

In 1919 the sales were reported at 33,553,699 brick, valued at \$484,854, or an average of \$14.75 per thousand, as compared with sales in 1918 of 14,589,324 brick, valued at \$186,066.

SAND AND GRAVEL.

The total sales of sand and gravel produced in Canada during 1919 amounted to 10,364,481 tons, valued at \$2,680,460. This production included: building sand and gravel for concrete and road building, 1,100,827 tons, valued at \$602,138; gravel, including sand and gravel and crushed gravel, 1,039,104 tons, valued at \$606,486; railway ballast, 8,119,387 tons, valued at \$1,373,704; moulding sand, 55,451 tons, valued at \$71,249; and other sands, core sands, engine sands, etc., 49,712 tons, valued at \$26,883.

SLATE.

There is a small annual production of slate in Canada, obtained from the New Rockland quarries, Melbourne township, Richmond county, Quebec, operated by the New Rockland Slate Co., Ltd.

The production in 1919 was 1,632 squares, valued at \$10,853, as compared with the production in 1918 of 933 squares, valued at \$5,124.

Exports have not been reported since 1909. The imports of slate during the past twelve years have ranged in value from \$90,000 to over \$200,000 per annum. During the calendar year 1919, they were valued at \$142,977.

STONE.

Statistics of stone production given herewith include the sales of all classes of stone used for building, monumental, and ornamental purposes, stone for paving purposes, curbstone and flagstone, rubble, riprap and crushed stone, limestone for furnace flux, sugar factories, etc., but stone used for burning lime or manufacturing cement is not included.

The kinds of stone quarried have been classed as granite (including trap rock, syenite, and other igneous rocks), limestone, sandstone, and marble.

The records are practically confined to quarry operations, and to the production of sawn or polished stone when these operations are carried on by quarry operators. In addition to this production of stone by regular operators, there is no doubt a large stone production by individuals, such as farmers and others, for house or barn foundations, concrete work, etc., of which it would be impracticable to obtain any satisfactory record. Much stone is also used in railway construction work and in road building, of which the record is probably very incomplete.

The total value of the production of stone during 1919, according to returns received, was \$4,225,937, as compared with a value of \$3,036,574 in 1918, showing an increase of \$1,189,363.

The number of active firms reporting in 1919 was 159, the total number of men employed 2,099, and total wages paid \$2,060,870.
