

OPEN FILE 1636 (REV. 1989)

Results of reanalysis for gold in lake sediment samples from NTS mapsheet 13N and anomalous samples throughout the entire survey area are present in this revised edition of Open File 1636. Statistics are also included not in the original open file. The parts of Open File 1636 affected by the revisions are the 1:250 000 scale gold value map, the 11x14 symbol-trend map for gold and the text. These original components should be replaced by the new revised materials and discarded.

Owners of the IBM-PC compatible 5 1/4 inch diskette with the digital data for Open File 1636 should notify GSC Publications Distribution to receive a replacement copy of the diskette.
