## RECOMMENDED CITATION

Geological Survey of Canada, 2022. Surficial geology, Cornwall Island, Nunavut, parts of NTS 59-C and 69-D; Geological Survey of Canada, Canadian Geoscience Map 398 (Surficial Data Model v. 2.3.14 conversion of Open File 541), scale 1:125 000.  
<https://doi.org/10.4095/314740>

## **ABSTRACT**

This new surficial geology map product represents the conversion of the parts of Open File 541 covering Cornwall Island (Edlund and Hodgson, 1978) and its legend, using the Geological Survey of Canada's Surficial Data Model (SDM version 2.3.14) (Deblonde et al., 2018). All geoscience knowledge and information from Open File 541 that conformed to the current SDM were maintained during the conversion process. The purpose of converting legacy map data to a common science language and common legend is to enable and facilitate the efficient digital compilation, interpretation, management, and dissemination of geological map information in a structured and consistent manner. This provides an effective knowledge-management tool designed around a geodatabase which can expand following the type of information to appear on new surficial geology maps.

## **RÉSUMÉ**

Ce nouveau produit cartographique de la géologie des formations superficielles correspond à la conversion de la partie de la carte couvrant l'île Cornwall du Dossier public 541 (Edlund et Hodgson, 1978) et de sa légende, en se servant du Modèle de données pour les formations superficielles (MDFS version 2.3.14) de la Commission géologique du Canada (Deblonde et al., 2018). Toutes les connaissances et l'information de nature géoscientifique du Dossier public 541 qui sont en conformité avec le modèle de données ont été conservées pendant le processus de conversion. Le but de la conversion de cartes publiées antérieurement suivant un langage scientifique commun et une légende commune est de permettre et de faciliter la compilation, l'interprétation, la gestion et la diffusion efficaces de l'information géologique cartographique en mode numérique de façon structurée et cohérente. Cette façon de faire offre un outil efficace de gestion des connaissances élaboré à l'aide d'une géodatabase qui pourra évoluer suivant le type d'information à paraître sur les nouvelles cartes de la géologie des formations superficielles.

# **SHEET 1 OF 1, SURFICIAL GEOLOGY**

## **GENERAL INFORMATION**

Author: Geological Survey of Canada

Geology by D.A. Hodgson, 1978, from field work in 1977, and air photo interpretation in 1977 and 1978

Geological compilation by D.A. Hodgson, 1978

Geology conforms to Surficial Data Model v. 2.3.14 (Deblonde et al., 2018).

Geological data conversion by D.E. Kerr, 2018

Geology has been spatially adjusted to fit the updated base.

Geomatics by C.D. Stevens

Cartography by A. De Silva

Scientific editing by L. Ewert

Initiative of the Geological Survey of Canada, conducted under the auspices of the Information Management Project as part of Natural Resources Canada's Geo-mapping for Energy and Minerals (GEM) program

Map projection Universal Transverse Mercator, zone 15  
North American Datum 1983

Base map at the scale of 1:250 000 from Natural Resources Canada, with modifications  
Elevations in metres above mean sea level

Proximity to the North Magnetic Pole causes the magnetic compass to be useless in this area.

This map is not to be used for navigational purposes.

The Geological Survey of Canada welcomes corrections or additional information from users ([gscpublications-cgcpublications@nrcan-rncan.gc.ca](mailto:gscpublications-cgcpublications@nrcan-rncan.gc.ca)).

Data may include additional observations not portrayed on this map. See map info document accompanying the downloaded data for more information about this publication.

This publication is available for free download through GEOSCAN  
(<https://geoscan.nrcan.gc.ca/>).

## **MAP VIEWING FILES**

The published map is distributed as a Portable Document File (PDF), and may contain a subset of the overall geological data for legibility reasons at the publication scale.

## **COORDINATE SYSTEM**

Projection: Universal Transverse Mercator  
Units: metres  
Zone: 15  
Horizontal Datum: NAD83  
Vertical Datum: mean sea level

## **BOUNDING COORDINATES**

Western longitude: 96°30'00"W  
Eastern longitude: 93°00'00"W  
Northern latitude: 77°51'00"N  
Southern latitude: 77°25'00"N

## **SOFTWARE VERSION**

Data has been originally compiled and formatted for use with ArcGIS™ desktop version 10.7.1 developed by ESRI®.

## **DATA MODEL INFORMATION**

### **Surficial**

The Geological Survey of Canada (GSC) through the Geo-mapping for Energy and Minerals Program (GEM) has undertaken the Geological Map Flow to develop protocols for the collection, management (compilation, interpretation), and dissemination of

surficial and bedrock geology data and map information. To this end, a data model has been created.

The Surficial Data Model (SDM) was designed using ESRI geodatabase architecture. The XML workspace document provided can be imported into a geodatabase, and the geodatabase will then be populated with the feature datasets, feature classes, tables, relationship classes, subtypes, and domains.

Shapefile and table (.dbf) versions of the data are included within the data. Column names have been simplified and the text values have been maintained within the shapefile attributes. The direction columns are numerical, to display rotation for points, and the symbol fields will hold the correct values to be matched to the appropriate style file.

For a more in depth description of the data model please refer to the official publication:
