FOREWORD

The *Bibliography of Seismology* will cease publication with this issue, Vol. 30, No. 6, September-December, 1964.

This bibliography has been issued by the Dominion Observatory since 1926, appearing initially in the *Bulletin of the Seismological Society of America* (Vol. 17, 150-182, 218-248; Vol. 18, 16-23, 110-125, 214-235, 267-283; Vol. 19, 206-227) and then in the *Publications of the Dominion Observatory*, Vols. 10, 12, 13, 14, 22, 30.

The International Seismological Research Centre, 6 South Oswald Road, Edinburgh 9, Scotland, intends to continue a seismological bibliography for 1965 onwards, the new bibliography using a key-word-in-context index. One of the problems in undertaking such work is the development of sufficient data flow in the form of reprints, pamphlets and so on. We therefore request that the users of this bibliography include the I.S.R.C. (Director, Dr. P. L. Willmore) in their distribution lists.

We intend to maintain our extensive and valuable file of seismological reprints in the Library of the Dominion Observatory, this file being available not only for staff scientists but also being frequently used by visiting scientists. We would therefore appreciate receiving reprints and pamphlets exactly as in the past. Seismological publications and contributions will, of course, be exchanged with institutions and others exactly as in the past.

This volume continues the policy initiated with Vol. 30, No. 1, January-April, 1963, in that each paper is listed only once and an author index, giving all authors, is included with this number. Similarly a subject index accompanies the issue.

The careful and devoted labour of the Chief Editor, Mrs. F. E. Langill has made possible the final volume in our series.
