# AERODYNAMIC SERIES OF THE EARTH PHYSICS BRANCH

BULLETIN NO. 64

## PZT observations of time and latitude ottawa and calgary, 1972

NOV 7 1975

GEODRICAL SURVEY  
DEPARTMENT OF ENERGY, MINES AND RESOURCES

J. POPELAR, S. B. SIM and M. O. WHEELER

DEPARTMENT OF ENERGY, MINES AND RESOURCES

OTTAWA, CANADA 1974

## **FOREWORD**

This publication is a continuation of the Time and Latitude Bulletins published by the Positional Astronomy Group. It presents in summary form the results of time and latitude observations made by the two Photographic Zenith Tubes (PZT) of the Earth Physics Branch which are located near Ottawa, Ontario, and Calgary, Alberta.

The delay in publication of this issue, No. 64, of the Geodynamics Series of the Earth Physics Branch is due to changes in personnel and organization that took place towards the end of 1972 and in the first half of 1973. As of July 1, 1973, responsibility for the PZT program was transferred to the newly organized Geodynamics Section of the Gravity Division where it became part of the Polar Motion Group.

Gravity Division**

# PZT observations of time and latitude ottawa and calgary, 1972

J. POPELAR, S. B. SIM and M. O. WHEELER

This bulletin presents the results of time and latitude observations made with the Ottawa and Calgary photographic zenith tubes (PZT) in 1972, in continuation of Bulletin No. 63.

**Ottawa PZT** has been located at Shirleys Bay near Ottawa since December 30, 1970. The adopted BIH co-ordinates for the instrument are:

5<sup>h</sup> 03<sup>m</sup> 40<sup>s</sup>.8500      45° 24' 0."800 N.

The observational program is based on the revised 1972 star catalogue described in detail in Bulletin No. 63. Nightly operation of the PZT is pre-programmed and fully automated. The instrument provided consistent data of high quality throughout the year. Altogether 198 photographic plates were obtained from which 4,049 transits of program stars were processed. For time comparisons the CHU and WWV time signals were used regularly.

**Calgary PZT** at Priddis near Calgary is located on the same parallel as the Herstmonceux PZT of the Royal Greenwich Observatory and has been in operation since June 1968. The adopted BIH co-ordinates are:

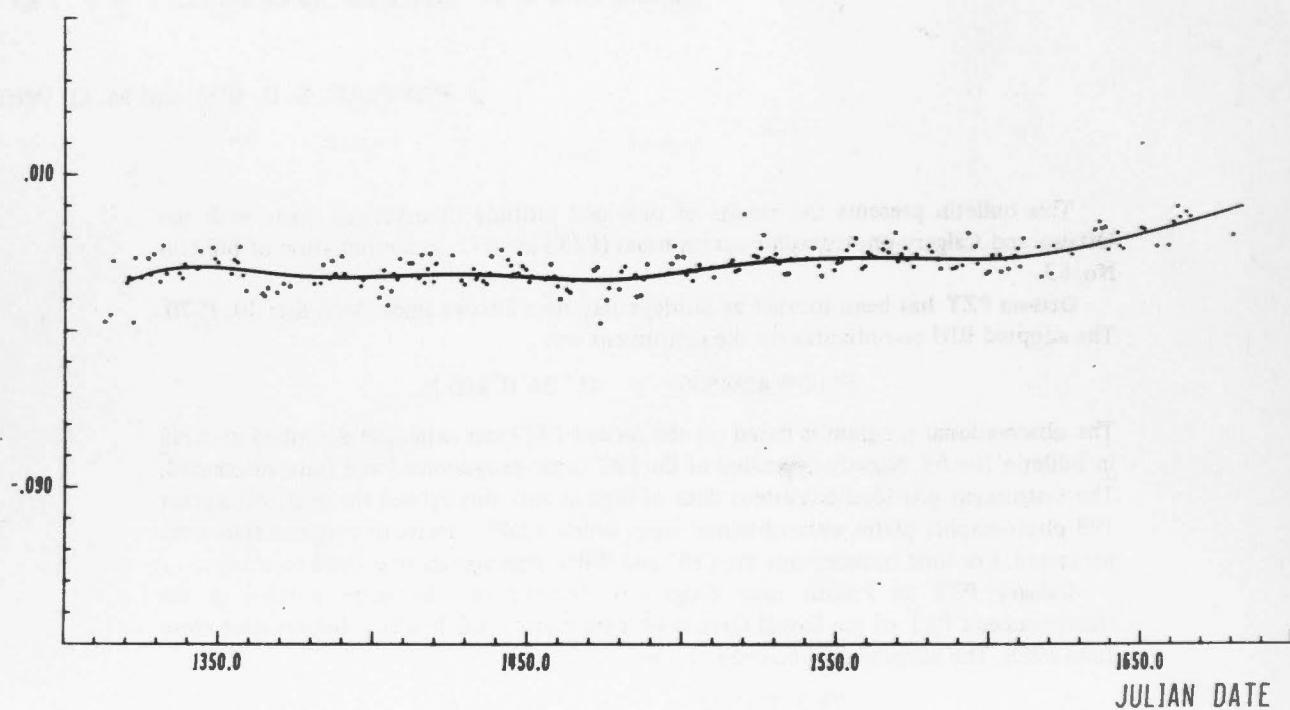

7<sup>h</sup> 37<sup>m</sup> 9<sup>s</sup>.5000      50° 52' 22".500 N.

The observational program is based on the Herstmonceux PZT star catalogue published in Royal Observatory Bulletin No. 113 and revised in April 1971 (Greenwich Time Report, 1971, April-June). The increased scatter of time and latitude observations in 1972 was apparently caused by a radial flaw in the crown component of the objective, reported in the last Bulletin No. 63, and by some mechanical problems of the ageing instrument. Late in December 1972 the old PZT No. 1 was dismantled and replaced by a new instrument of the same construction as the Ottawa PZT. All the data for the Calgary PZT presented in this bulletin were obtained with the old instrument. In 1972, 205 photographic plates were obtained from which 4,168 transits of program stars were processed. For time comparisons the WWV time signals were used predominantly as the reception of the CHU time signals was not always satisfactory.

In comparison with the previous bulletins only minor changes have been made in presentation of the time and latitude data. In accordance with modern practice the results are now given to 4 decimals of a second of time and 3 decimals of a second of arc. The technique suggested by Vondrak (Bull. Astr. Inst. of Czechoslovakia, Vol. 20, No. 6, 1969) and recommended in the BIH Annual Report for 1971 has been applied for smoothing. The smoothing was performed on plate means using weights which were proportional to the number of observed stars. Step adjustments of UTC were removed before smoothing and the value of 10<sup>-7</sup> was chosen as the coefficient of roughness for all curves. The smoothed time and latitude curves with the plate means are shown in Figures 1 and 2.

UT2-UTC + 3.2MS/DAY

OTTAWA PZT TIME OBSERVATIONS

OTTAWA PZT LATITUDE OBSERVATIONS

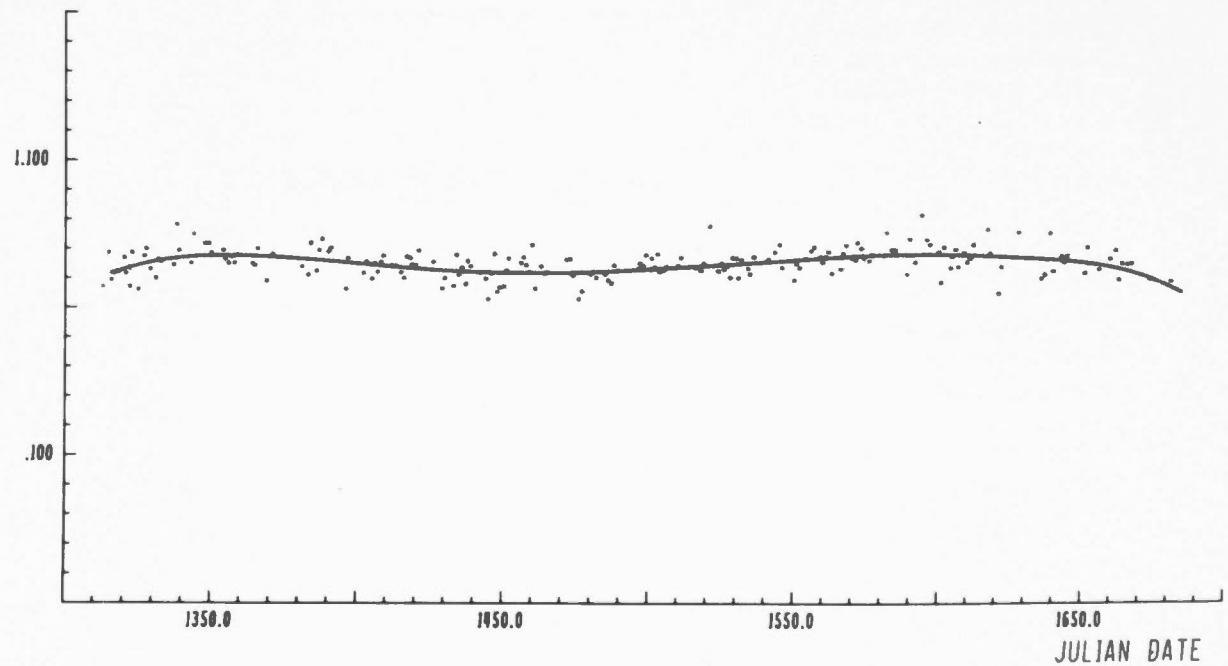

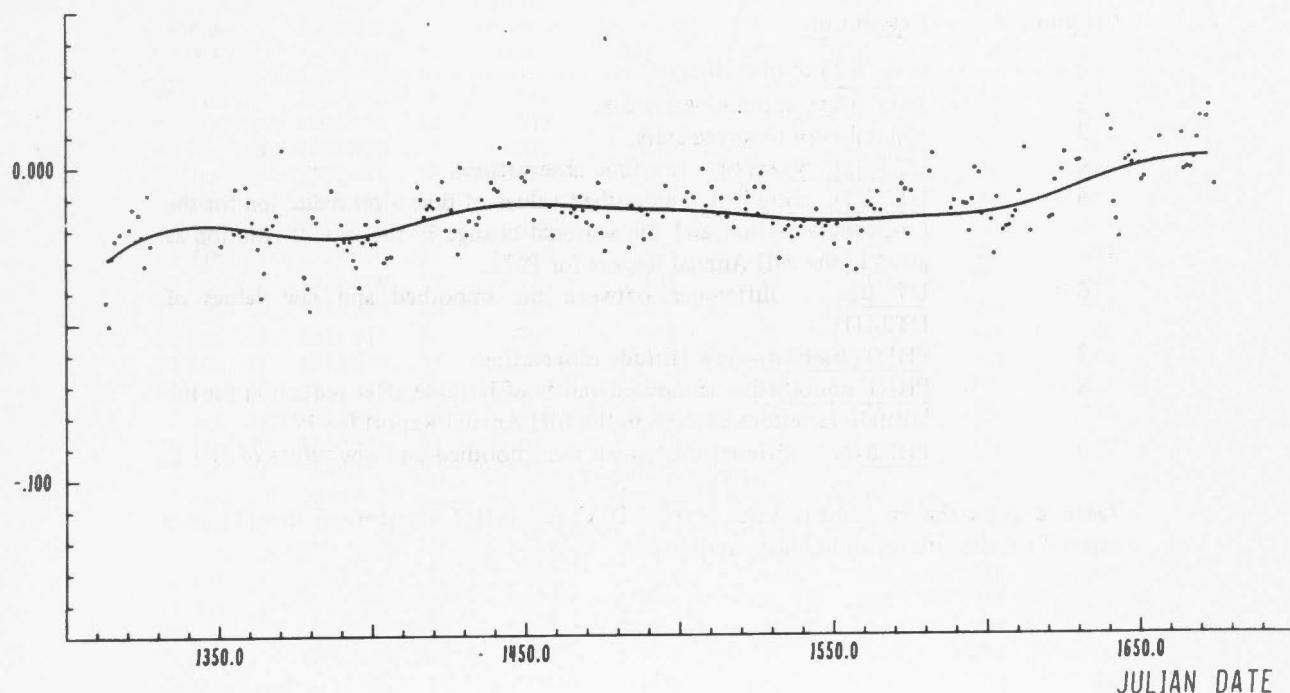

Figure 1. Individual night observations with the Ottawa PZT and the smoothed curves for UT2-UTC + 3.2 ms/day\* (STD 4.1 ms) and PHI 1 (STD 0.038).

\*The UTC step adjustments have been removed.

UT2-UTC + 3.2MS/DAY

## CALGARY PZT TIME OBSERVATIONS

PHI 1

## CALGARY PZT LATITUDE OBSERVATIONS

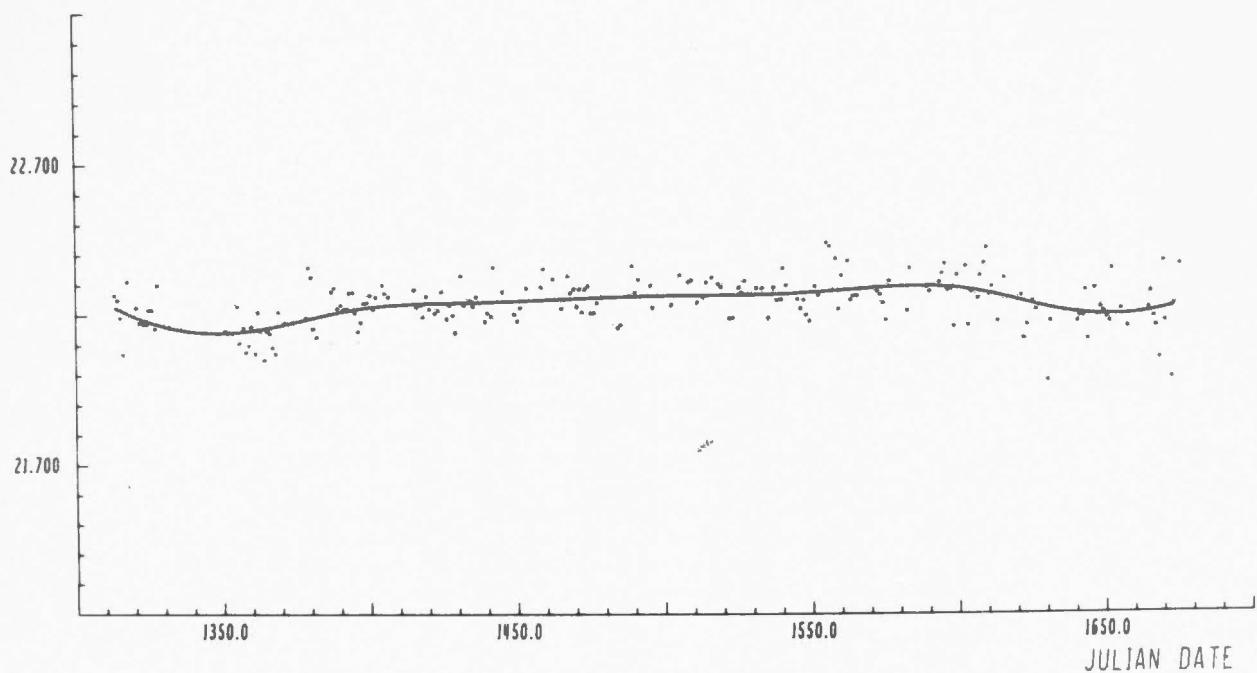

Figure 2. Individual night observations with the Calgary PZT and the smoothed curves for UT2-UTC + 3.2 ms/day\* (STD 7.4 ms) and PHI 1 (STD 0."059).

\*The UTC step adjustments have been removed.

**Table 1** presents the results of time and latitude observations arranged by nights (plates) separately for the Ottawa and Calgary stations.

<u>Column</u>	<u>Description</u>
1	<u>Date (UT)</u> of mid-observation.
2	<u>Julian Date</u> of mid-observation.
3	<u>N</u> number of observed stars.
4	<u>UT0-UTC observed</u> — raw time observations.
5	<u>UT2-UTC smoothed</u> — smoothed values of time after reduction for the longitude variation and the seasonal change in the rate of rotation as given in the BIH Annual Report for 1972.
6	<u>UT Res.</u> — difference between the smoothed and raw values of UT2-UTC.
7	<u>PHI 0 observed</u> — raw latitude observations.
8	<u>PHI 1 smoothed</u> — smoothed values of latitude after reduction for the latitude variations as given in the BIH Annual Report for 1972.
9	<u>PHI Res.</u> — difference between the smoothed and raw values of PHI 1.

**Table 2** gives the smoothed values of UT2-UTC and PHI 1 at standard five (5) days interval for the Ottawa and Calgary stations.
