MEANOOK MAGNETIC OBSERVATORY 1963

Geographic Latitude 54° 37' N

Geographic Longitude 113° 20' W

Officer-in-Charge: Anne B. Cook

Geomagnetic Latitude 61.8° N

Geomagnetic Longitude 301.0° E

Assistant: Glenn A. Brown

Introduction

Meanook magnetic observatory was established in July 1916 some 85 miles north of the city of Edmonton and 11 miles south of the town of Athabasca, Alberta. The observatory is controlled by the Division of Geomagnetism of the Dominion Observatory, Ottawa.

The Magnetic Equipment

The photographic recording equipment at Meanook consists of three sets; standard la Cour, low-sensitivity la Cour, and Ruska variometers. The la Cour variometers have been operating since the second Polar Year 1932-33. The Ruska variometers were installed in May 1961, in the basement of the old magnetic observatory. Since October 1st, 1963 they have been used as the Meanook standard recorders. Fibers of 40 microns diameter were installed in the Ruska horizontal and declination variometers. Variometer rooms were thermostatically controlled with no appreciable change in temperature. The chart speeds were 20 mm/hr for Ruska and 15 mm/hr for la Cour. All variometers were calibrated monthly. Telluric current apparatus was in operation during 1963. This report deals with magnetic observations only.

Scale Coefficients

Standard H 7.84 γ /mm Temp. 1 γ /degree C
D 1.00'/mm
Z 10.83 γ /mm

Ruska H 11.60 γ /mm
D 1.68'/mm
Z 11.86 γ /mm

Low H 22.56 γ /mm
D 2.40'/mm
Z 29.98 γ /mm

Stand-by Variometers

A three-component electrical Serson magnetometer was in operation with a chopper-bar type inked-output chart of 20 mm/hr. The scale sensitivity was 8.3 γ /mm corresponding to a full-scale sensitivity of 1000 γ in all components. By means of limit switches and a relay the sensitivity of the electrical magnetometer is halved whenever any one element goes off the scale, thus converting the instrument into a storm recorder.

Absolute Instruments

The absolute instrument used at Meanook during 1963 were Cooke magnetometer No. 15 for declination with IMS correction of $-0.3'$; quartz horizontal magnetometer No. 259 for horizontal intensity with IMS correction plus 0.00013H; Ruska earth inductor No. 6540 for determining inclination, and Dominion Observatory proton precession magnetometer* for determining total force; a transistorized fluxgate was used as a standby for determining declination, inclination and total force.

Absolute Observations of Base-line Values

Absolute observations were made on the average of twice a week. Simultaneous marks were placed on the la Cour and Ruska magnetograms to determine base-line values by measurement of the record ordinates and calculation of observed values. The r.m.s. values of the observed minus adopted for D, H, and Z were:

D; $\pm 3'$ H; $\pm 2\gamma$ Z; $\pm 3\gamma$

The Magnetic Reductions

The time used in 1963 was Universal Time (U.T.). The hourly values for D, H, and Z were obtained from the magnetograms by means of a ruled transparent scale. Each value represents the mean reading for 60 minutes centred on the half hour. The product of the ordinate and the scale value is added to the adopted base-line value and the sum obtained is the appropriate hourly value printed in the text. From the tabulated mean values for each calendar month the mean value for each hour for the day and the mean daily value for each day of the month were derived.

The tables for All Days, Internationally Quiet and Disturbed Days for D, H, and Z represent the mean values.

Magnetic Activity and Disturbance Indices

Maximum hourly ranges in all elements as well as disturbance indices and copies of magnetograms were sent upon request to geophysical prospecting agencies operating in Canada. Three-hour range indices from which planetary K-indices were derived were sent to De Bilt, Netherlands and Göttingen, Germany each month. K-indices and character figures were supplied to the International Association of Geomagnetism and Aeronomy Bulletins edited by Bartels, Romana and Veldkamp. Lower limit of K9 is 1500 γ .

*The value adopted for the gyromagnetic frequency for water is 4257.60 ± 0.03 cycles/second/oersted.
