FOREWORD

This publication series, "Seismological Series of the Earth Physics Branch", is a continuation of the series entitled "Seismological Series of the Dominion Observatory" with the same purpose. It provides an inexpensive medium for the publication and distribution at irregular intervals of seismological material and results of particular Canadian interest. The series developed from the new form of Seismological Bulletin first published for the year 1954. In 1960, an issue code was adopted after which the first issue in any year was designated -1, the second -2, and so on. Because of historical precedent, the first issue in any year was reserved for the seismological bulletin.

Because of changing procedures in the bulletin preparation, the increasing use of the series for the publication of summary information on Canadian seismicity and material relevant to the Canadian Standard Seismic Network, serial numbering of the series is now preferred. On April 1, 1970, the astronomical functions of the Observatories Branch were transferred to the National Research Council of Canada, and the geophysical functions reorganized within an Earth Physics Branch of the Department of Energy, Mines and Resources.

Accordingly, with the new title for the publication, serial numbering is adopted commencing with No. 59. A list follows of the numbers published or in press in the series to date. A small number of reprints of earlier issues is available on request to the Division of Seismology: an asterisk indicates that the reprint supply is exhausted.

K. Whitham
Chief, Division of Seismology
Earth Physics Branch

SEISMOLOGICAL BULLETIN

JANUARY - DECEMBER, 1969

This report lists the P-phase recordings obtained at the seismological stations maintained by the Seismological Service of Canada. All earthquakes reported by station operators are included except for local earthquakes with an estimated magnitude less than 3. The association of many of the station readings with USCGS-determined earthquakes is not listed, and epicentral and instrumental data on local earthquakes not included. However, a separate bulletin containing full information on Canadian earthquakes during 1969 will be issued as soon as possible. The seismological stations are divided into two divisions.

EASTERN DIVISION

Alert, N. W. T. - station code, ALE

Owned and operated by the Earth Physics Branch. Station seismologist during 1969 was H. von Hacht, succeeded by W. T. Piché.

Baker Lake, N. W. T. - station code, BLC

Owned and operated by the Earth Physics Branch. Station seismologist in 1969 was O. J. Jensen.

Coppermine, N. W. T. - station code, CMC

Owned by the Earth Physics Branch. Operated under contract for the Earth Physics Branch by the Radiosonde Division, Meteorological Branch, Department of Transport, until closure on Nov. 26, 1969.

Edmonton, Alberta - station code, EDM

Owned by the University of Alberta. Operated under contract for the Earth Physics Branch by the University of Alberta.

Flin Flon, Manitoba - station code, FFC

Owned by the Earth Physics Branch. Operated by the Canadian Armed Forces, Department of National Defence.

Fort Churchill, Manitoba - station code, FCC

Owned by the Earth Physics Branch. Operated under contract for the Earth Physics Branch by the Radiosonde Division, Meteorological Branch, Department of Transport.

Frobisher, N. W. T. - station code, FBC

Owned by the Earth Physics Branch. Operated under contract for the Earth Physics Branch by the Radiosonde Division, Meteorological Branch, Department of Transport.

Great Whale River, Poste de la Baleine, Quebec - station code, GWC

Owned and operated by the Earth Physics Branch. Station seismologist in 1969 was G. B. Nordman, succeeded by W. Shannon.

EASTERN DIVISION (cont.)

Halifax, Nova Scotia - station code, HAL

Owned by the Earth Physics Branch. Operated under contract for the Earth Physics Branch by Dalhousie University.

Inuvik, N. W. T. - station code, INK

Owned by the Earth Physics Branch. Operated under contract for the Earth Physics Branch by the Radiosonde Division, Meteorological Branch, Department of Transport.

Montreal, Quebec - station code, MNT

Owned and operated by Jean-de-Brébeuf College with contract support from the Earth Physics Branch (courtesy M. Buist, S. J., Director).

Mould Bay, N. W. T. - station code, MBC

Owned and operated by the Earth Physics Branch. Station seismologist during 1969 was W. T. Piché, succeeded by R. B. Horner.

Ottawa, Ontario - station code, OTT

Owned and operated by the Earth Physics Branch.

Resolute, N. W. T. - station code, RES

Owned and operated by the Earth Physics Branch. Station seismologist during 1969 was A. G. Blair, succeeded by R. E. Simmons.

St. John's, Newfoundland - station code, STJ

Owned by the Earth Physics Branch. Operated under contract for the Earth Physics Branch by Memorial University.

Scarborough, Ontario - station code, SCB

Owned by the Earth Physics Branch. Operated under contract for the Earth Physics Branch by the Radiosonde Division, Meteorological Branch, Department of Transport.

Schefferville, Quebec - station code, SCH

Owned by the Earth Physics Branch. Operated under contract for the Earth Physics Branch by McGill University Sub-Arctic Research Laboratory.

Sept-Iles, Quebec - station code, SIC

Owned and operated by the North Shore and Labrador Railway Company, Sept-Iles, P. Q., with contract support from the Earth Physics Branch.

Seven Falls, Quebec - station code, SFA

Owned and operated by the Earth Physics Branch. Station seismologist during 1969 was J. B. Racine.

Sudbury, Ontario - station code, SUD

Instrumented by the Earth Physics Branch. Operated under contract for the Earth Physics Branch by Laurentian University.

EASTERN DIVISION (cont.)

Thunder Bay, Ontario - station code, LHC

Owned by the Earth Physics Branch. Operated under contract for the Earth Physics Branch by Lakehead University. This location was originally called Lakehead, before the official change in name of the twin cities of Port Arthur and Fort William.

Yellowknife, N. W. T. - station code, YKC

Owned and operated by the Earth Physics Branch. Station seismologists during 1969 were M. M. Kuntz (O.I. C.), C. Huibers and L. G. Dussault.

WESTERN DIVISION

Alberni, British Columbia - station code, ALB

Instrumented by the Earth Physics Branch. Operated under contract for the Earth Physics Branch by W. N. Burgess.

Fort St. James, British Columbia - station code, FSJ

Owned and operated by the Earth Physics Branch. Station seismologist during 1969 was T. S. Browne.

Mica Creek, British Columbia - station code, MCC

Vault owned and operated by B. C. Power & Hydro Authority, but instrumented by the Earth Physics Branch.

Penticton, British Columbia - station code, PNT

Owned and operated by the Earth Physics Branch. Station seismologist during 1969 was M. Wilde.

Port Hardy, British Columbia - station code, PHC

Owned by the Earth Physics Branch. Operated under contract for the Earth Physics Branch by the Radiosonde Division, Meteorological Branch, Department of Transport.

Suffield, Alberta - station code, SES

Owned by the Earth Physics Branch. Operated for the Earth Physics Branch by Defence Research Board, Department of National Defence.

Victoria, British Columbia - station code, VIC

Owned and operated by the Earth Physics Branch. The operating centre of the western division is the Victoria Geophysical Observatory, Department of Energy, Mines and Resources, R. R. #7, Victoria, B. C.

A first-order standard station was commissioned during 1968 at Inuvik on September 25. Because of staff shortage, the Department of Transport did not commence daily seismic operations until late February 1969. The Thunder Bay observatory at Lakehead was commissioned on February 26, 1969.

Records for all stations of the Seismological Service are stored on 35 mm microfilm in Ottawa. Positive microfilm copies of records prior to July 1, 1966, are available to co-operating institutions on request to the Chief of the Division of Seismology, Earth Physics Branch, 3 Observatory Crescent, Ottawa 3, Ontario, Canada. From July 1, 1966 until December 31, 1967, all records from the Canadian Standard Seismograph Network were sent to the Seismological Data Center, National Weather Records Center,

Federal Building, Asheville, North Carolina, 28801, U.S.A., for microfilming with the American WWSSN (World Wide Seismic Station Network) records. This service was discontinued December 31, 1967, and microfilming for 1968 and 1969 was done in Ottawa with copies of all 35 mm negative microfilm sent to Asheville. Requests for microfilm or full-scale prints of Canadian seismograms may therefore still be obtained from the Asheville centre, from which a schedule of charges is available. This new procedure will continue to make copies of Canadian seismograms more readily available than has been possible in the past.

Magnification curves for all the various seismographs operated at the stations are found on the following pages. The curves are obtained by application of the Willmore bridge method on site. Earlier bulletins have given an explanation of these curves: the magnification and acceleration sensitivity of any instrument is simply determined by multiplying the velocity sensitivity by $2\pi/T$ or $T/2\pi$, respectively. The magnification curves show the periods of the seismometers and the galvanometers, and summary information on the co-ordinates, altitude, foundation material and date of calibration is included.

The phase response as a function of period of the various seismographs has been calculated in Ottawa, whenever useful, by using a digital computer. Such information is available on request.

Following the calibration curves, computer listings are given of the P phases recorded at the stations of the Network. This information is identical to that supplied immediately from certain selected stations to the United States Coast and Geodetic Survey for preliminary epicentral determinations, and from all stations with a time lag of several months to the International Seismological Centre and elsewhere for the definitive epicentral catalogues. The station three-letter code is followed by the day of the month, the P onset in hours, minutes and seconds (tenths of seconds if the direction of first motion is definite) and either emergent (EP) or impulsive (IP) phase character. Wherever possible, the direction of first motion of the short period vertical seismograph is indicated by either a C for compression or a D for dilatation. Period of P in seconds (T) and ground amplitude in millimicrons (A_g) are given by several selected stations for those earthquake P arrivals that have, within the first five seconds of the P arrival, a peak-to-peak trace amplitude of four or more millimetres. In some cases these measurements cannot be made because of non-uniform wave cycles and also because of faint traces. The listing from the station data supplied on punched cards or digital tape to international organizations has been machine-sorted into chronological order for each month of the year.

Mr. R. J. Halliday continued as seismologist-in-charge of quality control of the seismic network, assisted by Mr. A. Houle, and Mr. F. Lombardo as the senior technical officer for station maintenance, calibration and installation. Dr. F. Kollar was in charge of the central seismological laboratory in Ottawa supporting and servicing the network.

Kenneth Whitham
Chief, Division of Seismology

1969 BULLETIN NOTES

ALBERNI

From November 7, 1969, until late 1970, the polarity of the seismograph was reversed.

BAKER LAKE

On May 14, 1969, the short-period north-south galvanometer was replaced. The calibration curve for this seismograph, printed in this Bulletin, is a theoretical one arrived at by calibration of the galvanometer in Ottawa.

COPPERMINE

Because of a misadjustment of the long-period vertical galvanometer, the period was found to be sixty (60) seconds, rather than ninety (90) seconds as previously published. This change was verified by calibration of the galvanometer at the station. Between April 12 and April 15, 1969, the six station seismographs were calibrated "as found". At this time the long-period seismometers were set to fifteen (15) seconds period and the calibrations repeated. During the same interval, the short-period seismographs were checked and recalibrated. On November 26, 1969, the standard seismograph station was permanently closed down and the equipment returned to Ottawa. At this time individual galvanometer and seismometer checks were made for period and damping. Calibration curves for the "as found" and final settings are included in this Bulletin.

HALIFAX

The galvanometer of the long-period vertical seismograph was broken and replaced on June 4, 1969. With the aid of a galvanometer calibration performed at the station, a theoretical calibration for the seismograph was performed in Ottawa. The variation between the old and new calibrations was found to be less than five (5) per cent, hence no new calibration curve will be published at this time.

MICA CREEK

On September 16, 1969, an "as found" calibration was performed on the visual short-period vertical seismograph. Also, at this time a new seismometer was installed and the calibration was repeated. On November 12, 1969, a new power unit and recorder were installed. The amplifier gain was set to a level of -18 db and the filter bandpass of 0.5 to 3 Hz. The pen drive amplifier was operating at a factor of 2 higher than the original unit. In addition, because of improper loading of the amplifier, the seismometer was highly underdamped. On November 25, 1969, the gain was lowered from -18 db to -24 db. The system operated under these conditions until February 12, 1970, at which time the seismometer damping was corrected. The calibration curves depicting these five conditions of operation are included in this Bulletin. From November 11, 1969, until September 3, 1970, the polarity of the seismograph was reversed.

MONTREAL

During the interval November 24 to December 2, 1969 "as found" calibrations were performed on the three component short-period Benioff seismographs and the three long-period Columbia seismographs. After setting the long-period seismometer periods to fifteen (15) seconds, the calibrations were repeated. The short-period seismometers had their secondary coils shunted with 500 ohms, after removal of the secondary galvanometers from the system. Calibrations for the short-period seismographs were also repeated.

OTTAWA

The three short-period seismographs using Willmore seismometers were calibrated "as found" on March 17 and 18, 1969. After overhauling the instruments and making changes in the instrument damping, new calibrations were performed on March 24 and 25, 1969. On June 20, the long-period vertical seismograph which was installed during I. G. Y. was calibrated "as found" and the instrument operation was discontinued. The long-period seismographs with Columbia type seismometers operating at thirty (30) seconds were calibrated "as found" between July 9 and 18, 1969. The Columbia long-period seismometers were then adjusted to fifteen (15) seconds period and the calibration of the seismographs were repeated. Calibration curves for all instruments will be found in the following pages of this Bulletin.

PENTICTON

Because of the erratic behaviour of the long-period seismograph attenuators, new units were installed on March 17, 1969. The attenuators were adjusted to the settings established during the last calibration period. During the re-calibration period, May 28 to 31, 1970, an error was discovered in the 1965 calibration for the short-period vertical Willmore seismograph. The published curve was a factor of two (2) lower than the actual value. As a result of this error all A_g figures in this Bulletin given for Penticton will be a factor of two (2) high. A new copy of this calibration will be found in this publication.

PORT HARDY

The figures for the magnification at thirty (30) seconds as shown on the long-period seismograms are wrong from March 1965 until April 1970. The calibration curves as shown in the Bulletin are correct.

SCARBOROUGH

As of June 23, 1969, the short-period vertical seismograph was lowered from 15 per cent transmission to 10 per cent. The gains of both short-period horizontal seismographs were lowered to 5 per cent at this time as well. This change was necessary because of the continuous high microseismic level which resulted in a very disturbed looking set of records. New curves for the conditions described above are included in this Bulletin.

SEVEN FALLS

The transmission values for the two short-period horizontal seismographs were raised from 15 per cent to 35 per cent for the north-south and from 15 per cent to 40 per cent for the east-west, as of February 17, 1969. The new curves will be found in this Bulletin.

SEPT-ILES

The station was not in operation from March 26 to April 18, as the power lines were broken down.

ST. JOHN'S

Calibration curves published are for full gain, while all instruments are operating at half gain.

SUDBURY

During the relocating of the visual recording short-period vertical Willmore seismograph, the polarity was reversed. This condition continued from June 3 to October 11, 1969.

THUNDER BAY

A standard six-component Canadian Seismograph Station was commissioned on February 26, 1969. The instrumentation consists of a three-component, short-period seismograph using Willmore seismometers and a three-component long-period system using Columbia type seismometers. All six seismographs were calibrated to comply with the standards previously established for the other network stations. Copies of the final calibration curves will be found in this Bulletin.

VICTORIA

The long-period east-west galvanometer was broken November 4 and replaced November 13. A theoretical calibration was performed in Ottawa and found to be within 10 per cent of the existing curve. As a result, no new curve was drawn and the existing curve is the one being published at this time.

YELLOWKNIFE

From April 15 to 18 the station was temporarily closed down. "As found" calibrations were performed and all instruments checked. The long-period Columbia seismometers had their period set to twenty-five (25) seconds and the short-period Willmores to one (1) second free period. New calibrations were performed and will be included in this publication.

Special Notes:

In May of this year all the network stations had period and polarity checks made of their instruments. The errors found in the period settings were found to be no greater than two (2) per cent for all instruments. In November the period and polarity checks were repeated and all showed good results with the exception of two stations which were operating their long-period seismometers at twenty-five (25) seconds period or more. For these two stations the long-period vertical seismometer periods were out as much as ten (10) per cent. Corrections were made at this time.
