Canadian Seismic Network, December 1971

SEISMOLOGICAL BULLETIN

JANUARY - DECEMBER, 1971

This report lists the P-phase recordings obtained at the first-order seismological stations maintained by the Seismological Service of Canada. Some P phases from two second-order stations, Alberni and Mica Creek, are included. All earthquakes reported by station operators are included except local earthquakes with an estimated magnitude less than 3. The association of the station readings with earthquakes determined by the National Oceanic and Atmospheric Administration (NOAA) is not listed, and epicentral and instrumental data on local earthquakes not included. However, a separate bulletin containing full information on Canadian earthquakes during 1971 will be issued as soon as possible.

Unless otherwise stated, the stations listed are first order (3 short period and 3 long period seismographs) producing photographic records. A second-order station usually consists of one short period vertical "visual" seismograph (a stylus recording the signal on heat-sensitive paper). The second-order station at Sept-Iles produces a photographic record.

Alberni, British Columbia - station code ALB (2nd order)

Instrumented by the Earth Physics Branch. Operated for the Earth Physics Branch by W.N. Burgess.

Alert, N.W.T. - station code, ALE

Owned and operated by the Earth Physics Branch. Station seismologist in 1971 was W.T. Piché.

Baker Lake, N.W.T. - station code, BLC

Owned and operated by the Earth Physics Branch. Station seismologist in 1971 was O.J. Jensen.

Charlesbourg, Quebec - station code, CHQ (2nd order)

Instrumented by the Department of Geology, Laval University, with contract support from the Earth Physics Branch.

Edmonton, Alberta - station code, EDM

Instrumented by the Earth Physics Branch. Operated for the Earth Physics Branch by the Department of Physics, University of Alberta.

Flin Flon, Manitoba - station code, FFC

Owned by the Earth Physics Branch. Operated by the Canadian Armed Forces, Department of National Defence.

Fort Churchill, Manitoba - station code, FCC

Owned by the Earth Physics Branch. Operated under contract for the Earth Physics Branch by the Radiosonde Division, Atmospheric Environment Service, Department of Environment.

Fort St. James, British Columbia - station code, FSJ

Owned and operated by the Earth Physics Branch. Station seismologist during 1971 was T.S. Browne.

Fredericton, New Brunswick - station code, UNB (2nd order)

Instrumented by the Earth Physics Branch. Operated under contract for the Earth Physics Branch by the Physics Department, University of New Brunswick.

Frobisher, N.W.T. - station code, FBC

Owned by the Earth Physics Branch. Operated under contract for the Earth Physics Branch by the Radiosonde Division, Atmospheric Environment Service, Dept. of Environment.

Great Whale River, Poste de la Baleine, Quebec - station code, GWC

Owned and operated by the Earth Physics Branch. Station seismologist in 1971 was P.A. Fournier, succeeded by L.R. Newitt.

Halifax, Nova Scotia - station code, HAL (2nd order - after March)

Owned by the Earth Physics Branch. Operated under contract for the Earth Physics Branch by Dalhousie University.

Inuvik, N.W.T. - station code, INK

Owned by the Earth Physics Branch. Operated under contract for the Earth Physics Branch by the Radiosonde Division, Atmospheric Environment Service, Dept. of Environment.

Mica Creek, British Columbia - station code, MCC (2nd order)

Vault owned and operated by B.C. Power and Hydro Authority, but instrumented by the Earth Physics Branch.

Montreal, Quebec - station code, MNT

Owned and operated by Jean-de-Brébeuf College with partial instrumental support and contract support from the Earth Physics Branch. (Courtesy M. Buist, S.J., Director)

Mould Bay, N.W.T. - station code, MBC

Owned and operated by the Earth Physics Branch. Station seismologist during 1971 was G.D.A. Weston.

Ottawa, Ontario - station code, OTT

Owned and operated by the Earth Physics Branch.

Penticton, British Columbia - station code, PNT

Owned and operated by the Earth Physics Branch. Station seismologist during 1971 was M. Wilde.

Port Hardy, British Columbia - station code, PHC

Owned by the Earth Physics Branch. Operated under contract for the Earth Physics Branch by the Radiosonde Division, Atmospheric Environment Service, Dept. of Environment.

Quebec, Quebec - station code, QCQ (2nd order)

Owned and operated by the Department of Geology, Laval University, with contract support from the Earth Physics Branch.

Queen Charlotte, British Columbia - station code QCC (2nd order)

Instrumented by the Earth Physics Branch. Operated under contract for the Earth Physics Branch by the B.C. Forest Service.

Resolute, N.W.T. - station code, RES

Owned and operated by the Earth Physics Branch. Station seismologist was V.E. Cummins, succeeded by P.A. Fournier.

Saint John's, Newfoundland - station code, STJ

Owned by the Earth Physics Branch. Operated under contract for the Earth Physics Branch by the Dept. of Physics, Memorial University.

Scarborough, Ontario - station code, SCB

Owned by the Earth Physics Branch. Operated under contract for the Earth Physics Branch by the Radiosonde Division, Atmospheric Environment Service, Dept. of Environment.

Schefferville, Quebec - station code, SCH

Owned by the Earth Physics Branch. Operated under contract for the Earth Physics Branch by McGill University Sub-Arctic Research Laboratory.

Sept-Iles, Quebec - station code, SIC (2nd order)

Owned and operated by the North Shore and Labrador Railway Company, Sept-Iles, Quebec, with support from the Earth Physics Branch.

Seven Falls, Quebec - station code, SFA

Owned and operated by the Earth Physics Branch. Station seismologist during 1971 was J.B. Racine.

Sudbury, Ontario - station code, SUD (2nd order)

Instrumented by the Earth Physics Branch. Operated under contract for the Earth Physics Branch by the Department of Geology, Laurentian University.

Suffield, Alberta - station code, SES

Owned by the Earth Physics Branch. Operated for the Earth Physics Branch by the Defence Research Board, Department of National Defence.

Thunder Bay, Ontario - station code, LHC

Owned by the Earth Physics Branch. Operated under contract for the Earth Physics Branch by the Department of Geology, Lakehead University.

Victoria, British Columbia - station code, VIC

Owned and operated by the Earth Physics Branch. The seismic observatory is part of the Victoria Geophysical Observatory, Department of Energy, Mines and Resources, 5071 W. Saanich Rd., R.R. 7, Victoria, B.C. This unit constitutes the West Coast office of the Earth Physics Branch.

Whitehorse, Yukon Territory - station code, WHC (2nd order)

Instrumented by the Earth Physics Branch. Operated under contract for the Earth Physics Branch by the Radiosonde Division, Atmospheric Environment Service, Dept. of Environment.

Yellowknife, N.W.T. - station code, YKC

Owned and operated by the Earth Physics Branch. Station seismologists during 1971 were M.M. Kuntz (O.I.C.), C. Huibers and L.G. Dussault. Mr. N. Case succeeded L.G. Dussault in November 1971.

Six new second-order stations were installed this year. The Halifax first-order station was closed March 16, and a second-order station commenced operations April 1. Also on April 1, the second-order station at Fredericton commenced operations on the University of New Brunswick campus. Two second-order stations in Quebec started later in 1971; Quebec commenced Sept. 24 and Charlesbourg, November 11. A third station in this Laval University operation will commence in January 1972 at La Pocatière, Quebec. The Queen Charlotte second-order station commenced operations on Queen Charlotte Islands July 24. Whitehorse, Yukon Territory, commenced operations Sept. 1, 1971.

Records for all stations of the Seismological Service are stored on 35 mm microfilm in Ottawa. Microfilm of records prior to July 1, 1966, is available to cooperating institutions on request to the Chief of the Division of Seismology, Earth Physics Branch, Dept. of Energy, Mines and Resources, Ottawa, Canada, K1A 0E4. From July 1, 1966, till December 31, 1967, all records from the Canadian Standard Seismograph Network were sent to the Seismological Data Centre, National Weather Records Centre, Federal Building, Asheville, North Carolina, 28801, U.S.A., for microfilming with the American WWSSN (World-Wide Seismic Station Network) records. This service was discontinued December 31, 1967, and microfilming since then has been done in Ottawa and copies of all 35 mm negative microfilm sent to Asheville. Requests for microfilm or full-scale prints of Canadian seismograms may therefore still be obtained from the Asheville Centre, from which a schedule of charges is

available. This procedure will continue to make copies of Canadian seismograms more readily available than has been possible in the past.

Magnification curves for all the various seismographs operated at the stations are found on the following pages. The curves for the photographic seismographs are obtained by application of the Willmore bridge method on site. Earlier bulletins have given an explanation of these curves: the magnification and acceleration sensitivity of any instrument is simply determined by multiplying the velocity sensitivity by $2\pi/T$ or $T/2\pi$, respectively. The magnification curves show the periods of the seismometers and the galvanometers, and summary information on the coordinates, altitude, foundation material and date of calibration is included.

The phase response as a function of period of the various seismographs has been calculated in Ottawa, whenever useful, by using a digital computer. Such information is available on request.

Following the calibration curves, computer listings are given of the P phases recorded at most stations of the Network. Unchecked P phase readings, telegraphed daily to Ottawa from most first-order stations, are mailed to the United States National Oceanic and Atmospheric Administration and elsewhere for preliminary epicentral determinations. NOAA, in turn, relay this data to the International Seismological Centre for definitive epicentral catalogues. The station three-letter code is followed by the day of the month, the P onset in hours, minutes and seconds (tenths of seconds if the direction of first motion is definite) and either emergent (EP) or impulsive (IP) phase character. Whenever possible, the direction of first motion of the short period vertical seismograph is indicated by either "C" for compression or "D" for dilatation. Period of P in seconds (T) and ground amplitude in millimicrons (Ag) are given by nearly all first-order stations for those earthquake P arrivals that have, within the first five seconds of the P arrival, a peak-to-peak trace amplitude of four or more millimetres. In some cases these measurements cannot be made due to non-uniform wave cycles and also due to faint traces. The listing from the station data supplied on punched cards or digital tape to international organizations has been machine sorted into chronological order for each month of the year.

Mr. R.J. Halliday continued as seismologist in charge of quality control of the seismic network, assisted by Mr. W.E. Shannon. Mr. F. Lombardo continued as the senior technical officer for station maintenance, calibration and installation, assisted by Mr. B.A. Compton. Dr. F. Kollar was in charge of the central seismological laboratory in Ottawa supporting and servicing the network.

1971 BULLETIN NOTES

Starting in 1971, a rectangular (boxcar) pulse is being applied twice daily to the long period seismographs in some of the Canadian Standard Network stations. As the stations are visited from time to time, the pulse calibration is being incorporated into the system.

Starting in late January 1971, period and polarity checks were made on sixteen of the Canadian Network seismograph stations. All stations reported instruments functioning in satisfactory condition with the periods well within 3% of their original settings and with no polarity reversals. In future, stations having the pulse calibrations on their long period seismograms will not be required to make period and polarity checks.

The station at Scarborough, Ontario, Canada, is primarily operated as a training school for seismograph operators; records from this station are not recorded continuously throughout the year.

ALBERNI

From January 1 to February 20, the polarity of the short period seismograph was reversed. From February 20 to March 12, the polarity is correct. On March 12, 1971, a new amplifier was installed and the seismograph polarity was again reversed. On June 9, 1971, the polarity was finally corrected. All data found in this publication has been corrected and polarity reversals noted on each seismogram where applicable. P phase arrivals are tabulated only for January.

BAKER LAKE

In June 1971, the station instruments were calibrated in the "as found" condition. No instrument changes were made at this time. Small variations were found between these calibrations and the ones performed in July 1965. For the July 1965 calibrations, please refer to the 1965 Seismological Bulletin. In June 1971, various changes were made to the electronic equipment supplying precision power and to the timing circuits. The change in the timing circuits was necessary to facilitate the addition of the rectangular calibrating pulse for the long period Columbia seismographs and is applied at 0000 hours and 1200 hours.

FLIN FLON

During the period October 20 to 25, 1971, "as found" calibrations were performed on the three long period and three short period seismographs. The instruments were left in the "as found" condition with the exception of the long period east-west Columbia which had to be recalibrated since its galvanometer was replaced due to erratic behaviour. During this period, changes were made to the power supply and timing circuits so that the pulse calibration circuits for the long period seismographs could be put into operation. Calibration curves for the above-noted conditions will be found in this bulletin.

FORT CHURCHILL

In June 1971, "as found" calibrations were performed for the three short period seismographs and the three long period seismographs. No changes were necessary and the instruments were left in the "as found" condition. Calibrations for the "as found and left" conditions of the seismographs will be found in this publication. At this same time, new associated power and timing equipment were installed so that the long period pulse calibration circuit could be made operational for the Columbia seismographs. As earlier stated, these rectangular pulses can be found starting at the 0000 hours and 1200 hours marks.

FORT ST. JAMES

From January 4 to January 12, 1971, the long period vertical seismograph was out of operation due to a broken galvanometer. A theoretical calibration was performed in Ottawa with the aid of a galvanometer calibration performed on-site in Fort St. James. This new calibration curve is included in this bulletin along with the regular station calibration curves.

On August 5, 1971, the rectangular calibration pulse circuit for the long period seismographs was put into operation.

GREAT WHALE RIVER (Poste-de-la-Baleine)

In February 1971, "as found" calibrations were made on all six standard station seismographs consisting of the long period and three short period systems. As the instruments were found to be operating in a satisfactory manner, they were left to operate in the "as found" condition. Due to slight changes in the resistive network of the long period horizontal seismographs, a final calibration was made for these two instruments. Calibration curves for these instruments may be found in this bulletin.

HALIFAX

The first-order standard seismograph instruments were calibrated "as found" in March 1971, and then closed down. Calibration curves for the three long period and three short period seismographs will be found in this publication. At this time, a second-order seismograph was set up to replace the first-order standard seismographs. This instrument consisted of a short period vertical seismometer operating into a Teledyne EA310 amplifier with a visual helicorder system to produce a short period vertical seismogram. The system has incorporated a standard power system to deal with power failures which might occur. The timing system is similar to the standard operation utilizing a crystal-operated chronometer with daily time signal checks.

MICA CREEK

Due to problems with the amplifiers on this second-order station equipment, various changes and alterations were made during the course of this year. No attempt will be made to incorporate these tests and changes in this report, but information is available for anyone requiring data other than the four theoretical calibrations which can be found in this publication covering the period from February 12, 1970, to February 24, 1972, when the data link cable was broken. P phase arrivals are tabulated only to the end of April 1971.

MONTREAL

On February 6, 1971, the underdamped short period vertical seismograph was corrected by resetting the seismometer damping. The short period vertical seismograph was then recalibrated. The calibration curves of both conditions are published in this bulletin.

OTTAWA

In January 1971, the long period vertical and the long period east-west seismographs were calibrated. Calibration curves for these two instruments may be found in this publication. In April 1971, a standard pulse calibration circuit was added to the long period seismographs. The pulses are applied by a nominal current source of 0.1 microamps for a period of seven seconds duration at 0000 hours and 1200 hours, U.T.

SEPT-ILES

This second-order station, consisting of a short period vertical seismometer utilizing a photographic drum recorder, was re-activated on January 12, 1971. The station had been closed earlier in December 1970 due to inclement weather conditions.

VICTORIA

On April 19, 1971, the short period vertical Benioff seismograph was calibrated. Due to the wrong setting of the attenuators, a second calibration was performed on October 1, 1971. The two short period horizontal Benioff seismographs were calibrated on December 10, 1971. Curves showing the conditions before and after can be found on later pages of this publication.

YELLOWKNIFE

On February 5, 1971, the long period vertical seismograph was restored to normal operation. See calibration curve dated February 5, 1971, in this bulletin. The short period vertical galvanometer was replaced on July 23, 1971. The galvanometer calibration was performed on-site and a theoretical curve was produced.

A copy of the curve will be included along with the other station calibration curves.
