© 1987 Her Majesty the Queen in Right of Canada, Department of Energy, Mines and Resources.

The 200 (nautical) mile fishing zones refer to the area of Canadian jurisdiction for the several management of offshore fisheries resources. When areas of the 200-mile fishing zone are shown on the map, the fishing zone limits are not shown.

### MAJOR SALMON AND ARCTIC CHARR SPAWNING RIVERS AND LAKES

Salmon (anadromous species of both Pacific Salmon and Atlantic Salmon, *Salmo salar*)  
Arctic Charr (anadromous species, *Salvelinus alpinus*)  
Salmon and Arctic Charr

### MAJOR FISH LANDING POINT

Wheeler, \* 4

### 200-MILE FISHING ZONE LIMIT

NOTES

Key fishing areas for selected ocean fish species refer to the most part to those areas of prime commercial fishing activity as opposed to the general distribution of individual species. The fish species identified on the map represent, on a national basis, most major commercially significant ocean species based on average annual landed value 1977-1981.

Species grouping refers to a classification based primarily on fish habitat and is summarized as follows:

Groundfish refers to those fish species which live in association with the ocean floor. The main commercial species include cod, halibut, haddock, redfish and a variety of flatfish. This species grouping consistently accounts for over 60% of the total landed weight of fish in Canada.

Pelagic and estuarial fish species are those which either occur offshore throughout the water column (pelagic) or can be found primarily in estuaries or near mouths (estuarial). The main commercial species are salmon, herring, mackerel and capelin. Although part of this species grouping, salmon are frequently singled out due to their anadromous nature (they migrate from sea to rivers to spawn) and their major contribution to the total value of Canada's fisheries industry.

Molluscs and crustaceans are invertebrate animals which live primarily on the ocean floor. In terms of landed value, this species grouping contains some of the most important commercial species, namely lobster and scallops. Other major species include shrimp, crab and squid.

Major commercially fished rivers and lakes have been selected and classified according to average annual landed weight (1977-1981). The 2 000 kg threshold represents the approximate limit for the identification of commercially fished areas and rivers in Canada.

Research by P.J. Love, Geographical Services, Geographical Services Division, Surveys and Mapping Branch, Energy, Mines and Resources Canada.

Cartography by Cartography and Topography, Geographical Services Division, Surveys and Mapping Branch, Energy, Mines and Resources Canada.
