

INDEX OF REGIONAL BASE AND BATHYMETRY SERIES MAPS AT 1:2 000 000

SELECTED MAP SERIES

-  NATIONAL TOPOGRAPHIC SYSTEM
Scale 1:50 000 and 1:250 000 (see inset to the right)
-  INTERNATIONAL MAP OF THE WORLD
Scale 1:1 000 000
-  NATIONAL EARTH SCIENCE SERIES: BATHYMETRY
Scale 1:1 000 000
-  REGIONAL BASE MAP SERIES
Scale 1:2 000 000
-  REGIONAL BATHYMETRY MAP SERIES
Scale 1:2 000 000

NOTES

1. The National Topographic System series provides general-purpose topographic map coverage of Canada at scales of 1:50 000 and 1:250 000. These scales allow for a detailed depiction of relief, drainage, forest cover, administrative areas, populated places, transportation routes and facilities, and other cultural features. Complete coverage of Canada at the scale of 1:50 000 will require 12 822 maps; of these 85% have been completed as of November 1, 1988. Coverage is complete at the scale of 1:250 000 (9 177 maps). These maps produced by the Topographical Mapping Division, Canada Centre for Mapping and the Mapping and Charting Establishment, Department of National Defence, use the Transverse Mercator Projection. New editions are metric. The inset diagram shows the breakdown of primary quadrangles and numbering system employed by the National Topographic System.
2. The objective of the International Map of the World (IMW) series is to provide uniform coverage of the world at the scale of 1:1 000 000 according to United Nations specifications. These maps are designed to meet the needs of specialists in many scientific disciplines as well as those of general users and serve as bases for thematic maps of diverse subjects. The series is metric and employs the Lambert Conformal Conic Projection. Canadian coverage of the series is complete and includes 69 maps produced by the Geographical Services Division, Canada Centre for Mapping, and 5 maps of common Canada/United States boundary areas prepared by the United States Geological Survey.
3. The National Earth Science Series: Bathymetry, at a scale of 1:1 000 000, is produced by the Canadian Hydrographic Service of the Department of Fisheries and Oceans. This map series shows the bathymetry and morphology of the sea floor in waters adjacent to Canada. The series is metric, uses the Lambert Conformal Conic Projection, and is generally based on the same map-sheet grid as the International Map of the World. When complete, this series will include 64 maps.
4. The Regional Base Map Series at the scale of 1:2 000 000 comprises seven, general-purpose base maps on the Lambert Conformal Conic Projection. There is a single sheet for each of the Atlantic Provinces, Quebec, Ontario, the Prairie Provinces, and British Columbia and two for the Yukon and Northwest Territories. This series, produced by the Geographical Services Division, serves as the compilation base for thematic information for maps of the National Atlas of Canada, 5th edition.
5. The Regional Bathymetry Map Series at the scale of 1:2 000 000, provides regional coverage of the morphology of the sea floor. This map series, produced by the Canadian Hydrographic Service of the Department of Fisheries and Oceans, is metric and employs the Lambert Conformal Conic Projection. When completed, this series will include 8 maps derived primarily from the National Resource Series of maps (1:250 000) and the GEBCO Bathymetric Plotting Sheets (1:1 000 000) produced by the same agency.
6. Map scale is frequently expressed by a representative fraction or ratio such as 1:50 000 or 1/50 000. This ratio represents the relationship between a specified distance on the map and the actual distance on the ground. For example, at the scale of 1:50 000, 1 unit of measurement on the map equals 50 000 units of the same measurement on the ground.
7. The boundary lines of the map sheets shown on the main index map are coincident. They have been displaced in the interest of legibility.
8. Individual map sheets in the series identified may be obtained from the following agencies:
National Earth Science Series: Regional Bathymetry Map Series:
The Hydrographic Chart Distribution Office, Fisheries and Oceans Canada, 1675 Russell Road, P.O. Box 8080, Ottawa, Ontario K1G 3H8.
Other series identified: Canada Map Office, Energy, Mines and Resources Canada, 615 Booth Street, Ottawa, Ontario, K1A 0G9.
This index map enables the user of National Atlas of Canada thematic maps to locate and identify the relevant maps for topographic, bathymetric or other detail.

Scale 1:7 500 000 or 1 centimetre represents 75 kilometres
 75 150 225 300 375 450 kilometres
 Lambert Conformal Conic Projection, Standard Parallels at 49°N and 77°N, Modified Polyconic Projection, South of Latitude 60°.

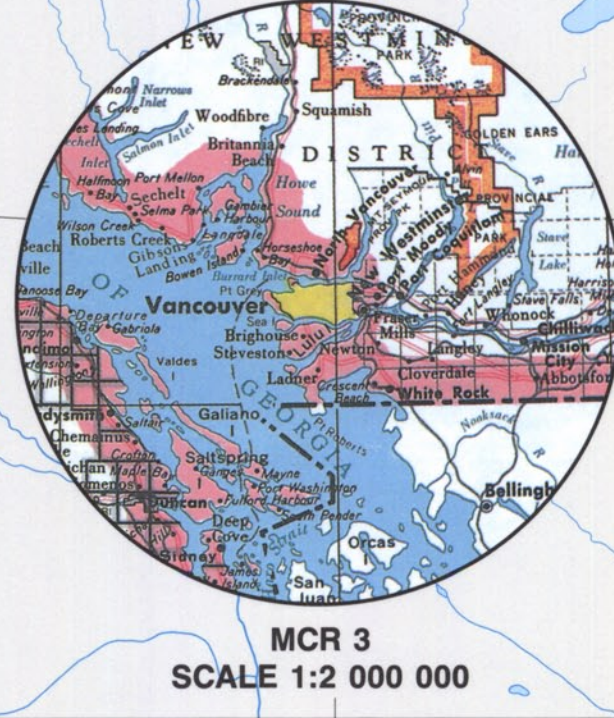

NATIONAL TOPOGRAPHIC SYSTEM

Breakdown of Primary Quadrangles

The longitudinal extent of the map sheets varies according to the latitude:

Latitude	1:50 000	1:250 000	of longitude
80° - 84°N	2"	8"	
68° - 80°N	1"	4"	
40° - 68°N	30'	2"
