

Population Distribution, 2001

Abstract

The Census counted 30 007 094 people on May 15, 2001, compared with 28 846 761 on May 14, 1996. Urbanization continued in 2001, 79.4% of Canadians lived in an urban centre of 10 000 people or more, compared with 78.5% in 1996. Outside the urban centres, the population of rural and small-town areas declined 0.4%.

In 2001, just over 64% of the nation's population, or about 19 297 000 people, lived in the 27 census metropolitan areas (CMAs), up slightly from 63% in 1996. Seven of these 27 CMAs saw their populations grow at a rate of at least double the national average of 4%. The strongest rise, by far, occurred in Calgary.

From 1996 to 2001, the nation's population further concentrated in four broad urban regions: the extended Golden Horseshoe in southern Ontario; Montréal and environs; British Columbia's Lower Mainland and southern Vancouver Island; and the Calgary-Edmonton corridor. In 2001, 51% of Canada's population lived in these regions, compared with 49% in 1996.

Source: Adapted from Statistics Canada, Population and Dwelling Counts, for Census Divisions, Census Subdivisions (Municipalities) and Designated Places, 2001 and 1996 Censuses - 100% data, Catalogue number 93F0050XDB01003.

The Daily is Statistics Canada's official release bulletin. The Daily for March 12, 2002 (<http://www.statcan.gc.ca/daily-quotidien/020312/tdq020312-eng.htm>), marked the public release of this census variable. Highlight tables allowing users to perform simple rank and sort functions with the data at various levels of geography are available for this variable here: Population and Dwelling Counts: Highlight Tables, 2001 Census (<http://www12.statcan.ca/english/census01/products/standard/popdwell/tables.cfm>) . Technical notes for this variable can be found at 2001 Census Technical Reports and User Guides.

The text was adapted from Statistics Canada, A profile of the Canadian Population: where we live, Catalogue number 96F00030XIE2001001. Statistics Canada information is used with the permission of Statistics Canada. Information on the availability of the wide range of data from Statistics Canada can be obtained from the Statistic Canada's Regional Offices, its World Wide Web site at: www.statcan.ca, and its toll-free access number 1-800-263-1136.

Data and Mapping Notes

The maps in this series showing 2001 Census variables are published in collaboration with Statistics Canada. The Atlas of Canada with Statistics Canada, have worked jointly to produce a series of maps about Canada, which utilize the mapping and geographic expertise domain to the Atlas of Canada and the subject matter expertise of Statistics Canada scientists.

Map Visualization

The Atlas of Canada uses a dynamic mapping interface to show geographic information. By using the tools provided, users can zoom in and out, and query the map for more information on specific areas of interest (using Get Info from Map located above the map), and read about the maps in the associated text.

The majority of maps in this series use the following scales to show information, which are associated to the four levels of zooming in onto the map. Two levels of data aggregation are presented, census division data and census subdivision data, which usually require different class intervals, mapped at appropriate zoom levels as shown below in Table 1.

Table 1. Map Scales

Zoom	Representation Scale	Geostatistical Area	Compilation Scale
Zoom 0 (initial map view)	1 : 42 000 000	census division ecumene	1 : 7 500 000
Zoom 1	1 : 15 000 000	census division ecumene	1 : 7 500 000
Zoom 2	1 : 5 000 000	census subdivision ecumene	1: 1 000 000 census subdivision ecumene on 1 : 7 500 000
Zoom 3	1 : 1 300 000	census subdivision ecumene	1: 1 000 000
Zoom 4	1: 600 000	census subdivision ecumene	1: 1 000 000

Source: Natural Resources Canada. GeoAccess Division.

The population ecumene is used to show in most of the maps in this series areas within the census divisions and census subdivisions, which have population densities greater than or equal to 0.4 persons per square kilometre (1 person per square mile). The non-ecumene or sparsely populated areas appear as white patches within the census divisions and census subdivisions for which no thematic data are shown.

Geography

Statistics Canada information is used with the permission of Statistics Canada. Information on the availability of the wide range of data from Statistics Canada can be obtained from the Statistics Canada's Regional Offices, its World Wide Web site at: www.statcan.ca, and its toll-free access number 1-800-263-1136.

The geographical areas to which the data have been georeferenced, are based on one or more of the following Statistics Canada's geostatistical areas. In most cases, the population census division ecumene and the population census subdivision ecumene are used in the same map, for viewing at different map zoom levels.

Census Division (CD)

Census division is the general term for provincially legislated areas (such as county, regional municipality and regional district) or their equivalents. Census divisions are intermediate geographic areas between the province level and the municipality (census subdivision). Census divisions have been established in provincial law to facilitate regional planning, as well as the provision of services that can be more effectively delivered on a scale larger than a municipality. In Newfoundland and Labrador, Manitoba, Saskatchewan, Alberta, Yukon Territory, the Northwest Territories and Nunavut, provincial/territorial law does not provide for these administrative geographic areas. Therefore, Statistics Canada, in co-operation with these provinces and territories, has created equivalent areas called census divisions for disseminating statistical data.

Census Subdivision (CSD)

A census subdivision is an area that is a municipality or an area that is deemed to be equivalent to a municipality for statistical reporting purposes (for example, as an Indian reserve or an unorganized territory). Municipal status is defined by laws in effect in each province and territory in Canada. Census subdivisions are classified into 46 types (<http://www12.statcan.ca/english/census01/Products/Reference/dict/geo012.htm>) according to official designations adopted by provincial or federal authorities.

Census Metropolitan Area (CMA) / Census Agglomeration (CA)

A census metropolitan area (or a census agglomeration) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10 000 to form a census agglomeration and at least 100 000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of

integration with the central urban area, as measured by commuting flows derived from census place of work data.

Population Ecumene

Ecumene is a term used by geographers to mean inhabited land. The population ecumene is based on blocks with a minimum population density of 0.4 persons per square kilometre. Blocks are the smallest unit of geography to which census data is associated. Two ecumenes are utilized in this project: population census division ecumene and population census subdivision ecumene.

The population census division ecumene is derived from the Statistics Canada Population Ecumene Census Division Boundary File (Catalogue number 92F0159GIE) and from their Census Division Boundary File (Catalogue number 92F0159XIE). Using these two boundary files, The Atlas of Canada census division ecumene is derived using census divisions with a population density of 0.4 persons per square kilometre, matched to the population ecumene census division boundary file (from Statistic Canada) to remove known areas of sparse population within census divisions in southern areas of Canada, or where the topography and climate inhibits settlement.

The population census subdivision ecumene has been produced jointly with Statistics Canada and the Atlas of Canada.

Map Notes

Population Distribution, 2001

This map is based on the population of census subdivisions (and should not be confused with the population of populated places). Zoom 0 (or initial map view) shows a simple distribution of the population, indicating the general distribution of Canada's population. Symbols in the legend are not drawn to scale and only the centroids of the census subdivision ecumene are mapped at the initial view. All point symbols are located in the centre of the census subdivision. It is interesting to note that in the National Atlas of Canada, Fourth Edition the population distribution maps, define a census subdivision with a population of less than 1000 as rural.

On subsequent zoom levels, a more detailed distribution is provided. The classification is the same used for the population intervals for populated places, usually found on all maps in the Atlas of Canada. Twenty-nine Indian reserves and one Indian settlement were incompletely enumerated (<http://www12.statcan.ca/english/census01/Meta/appendix02.cfm>) , and therefore have no classification.
