THE DECLINATION OF THE COMPASS NEEDLE. 1957

The declination of the compass needle at any place along a red line is the declination given on that red line. At other places the declination is between those given on the neighbouring red lines; thus at the place marked A, the declination is between N. 30°30' E. and N. 31°00' E. The easterly declinations of the compass needle are decreasing 2.6 minutes annually.

Surveyed and compiled by the Topographical Survey,
Dept. of Mines and Technical Surveys 1944-47.
Partially revised by the A.S.E. with aerial photographs taken by the R.C.A.F. 1948.
Drawn and printed by the Army Survey Est. R.C.E. 1957.
Area in Alaska from maps of the United States Geological Survey.
