## Overview

The Aboriginal Lands (AL) conceptual model was elaborated in collaboration with the Surveyor General Branch and the Centre for Topographic Information. It has been adopted by the Canadian Council on Geomatics (CCOG).

## Model Description

The model follows UML (Unified Modelling Language) constructs. It is described through three components: an AL feature as a geographic feature with a polygon representation, six data types that are used in the definition of the AL feature, and six code lists, which are used in the definition of the AL feature and the data types.
