

DATE OF PRODUCTION

Last release date: July 11, 2018

Summary : Publication of 212 NHN datasets including: 186 NHN-CL3 watersheds and 26 NHN-CL2 watersheds. With the publication of these new watersheds, nearly 15% of watersheds covering Canada has been improved, allowing better analysis of hydrological networks.

Details:

As part of the project "Lake Winnipeg Basin Initiative" watershed 05OF000 has been updated using orthophotos and imageries. This is the first out of 5 watersheds that will be completed in the coming years.

113 watersheds in NHN-CL2, NHN-CL3 or NHN-CL4 were produced to correct anomalies.

Furthermore, in maintenance effort, 98 watersheds were regenerated following watershed limits redefinitions.

For more information, please refer to the [National Hydro Network \(NHN\) - Release Notes](#).

Maintaining NHN work is done as part of the GeoBase Surface Water Program ([GeEAU](#)).
