

## How to relate a symbol library for CanVec and NTDB products with the Arc Map software versions 10 and higher?

Here is an 'add-In' to load a style sheet, save it and activate the software using the "Customize / Add-In Manager..." header menu.

To enable the style sheet (that you downloaded previously) using the header menu click on "Customize / Style Manager." In the next menu, click on "Styles" then on "Add style to the list" and select the appropriate style sheet.

To enable the tool, click on "Customize / Customize Mode...", select "NRCan NRCan-Styles" in the "Toolbars" tab and the style small box will appear. Click on the scroll bar to select the appropriate style sheet. Click on the blue button in the style small box to activate the selected symbology.

You can use this procedure for CanVec and NTDB style sheets.
